Introduction	1
Survey of the Literature	5
Pathology	6
Incidence	7
Relation to Age	8
Relation to Alcohol Intoxication	8
Prognosis	9
Vasospasm and Ischaemic Neurological Deficits	
After tSAH	10
Summary	12
Patient Characteristics and Methodology	13
Patient Population	13
Variables Recorded	14
Laboratory Evaluation	14
Treatment of Patients	15
CT Evaluation	15
Criteria for Assessment of Amount of Blood on CT	15
Criteria for Classification of the Mechanism of Injury	17
Criteria for Defining Severity of Head Injury	
on Entry to the Trial	17
Criteria for Assessment of Outcome	17
Biometric Methods	18
Summary	18

Analysis of CT Findings in tSAH	21
Frequency	21
Time of CT	22
Amount of Blood	22
Clearance of tSAH	24
Topographic Location of Blood	24
Associated CT Findings	30
Contusions	30
Subdural Haematoma	32
Epidural Haematoma	32
Intracerebral Haematoma	32
Intraventricular Blood	32
Signs of Raised ICP on CT	33
Hypodensity Compatible with Ischaemia	33
Summary	33
 Demographic and Clinical Aspects of tSAH	 35
Age	35
Sex	36
Cause of Injury	36
Alcohol Intake Before Injury	36
Multiple Injuries	38
Interval Between Injury and Admission	38
Severity of Head Injury on Entry to the Trial	38
Plain Skull X-Rays	39
Craniotomy for Removal of Mass Lesions	40
Intracranial Pressure Monitoring	40
Haemodynamics	40
Neurological Status	41
Body Temperature	41
Mortality	43
Summary	44
 Outcome in tSAH	 45
Outcome in tSAH	45
Amount of Blood and Outcome	46

Fisher's Categories and Outcome	47
Location of Blood and Outcome	47
Associated CT Lesions and Outcome	48
Relationship of Various Demographic and Clinical Aspects to Outcome	49
Functional Assessment	50
Post-traumatic Epilepsy	51
Summary	51
 tSAH as a Prognostic Factor	 53
Risk of Unfavourable Outcome in tSAH Patients	54
Determination of Prognostic Factors	54
Summary	56
 Clinical Laboratory Evaluation in tSAH	 57
Haematocrit	57
Leucocytes	58
Platelets	60
Serum Aminotransferases	62
Serum Lipase	62
Serum Amylase	63
Summary	64
 Therapeutic Prospects of tSAH	
with the Calcium Antagonist Nimodipine	65
Pharmacological and Clinical Rational for the Use of the Calcium Antagonist Nimodipine in Head Injury	66
The Effect of Nimodipine in the Overall Head-Injury Study Population	69
The Effect of Nimodipine on tSAH	70
Adverse Events	71
Summary	71
 Confirmation of the Hypothesis: The German tSAH Study ...	 73
Patient Population	73
Treatment with the Test Drug	74

Statistical Analysis	74
Demographic Results	75
CT Findings	75
Transcranial Doppler Blood Flow Velocities	77
Blood Pressure and ICP	79
Follow-Up Investigation	80
Post-traumatic Epilepsy	84
Pool Analysis of 460 tSAH Patients	84
Summary	84
 Discussion and Conclusions	 87
tSAH, a Frequent Finding in Head Injury	87
tSAH: CT Aspects	88
tSAH: Clinical Aspects	88
tSAH and Outcome	90
tSAH and Vasospasm	91
tSAH and Post-traumatic Epilepsy	93
tSAH as a Prognostic Factor	93
tSAH and Its Treatment with Nimodipine	94
