|                                                                                                             |     |
|-------------------------------------------------------------------------------------------------------------|-----|
| S. Albeverio, A. Hilbert                                                                                    |     |
| Some Remarks on Stochastically Perturbed (Hamiltonian) Systems                                              | 1   |
| Ph. Blanchard, J. Stubbe                                                                                    |     |
| Stability of Ground States for Non-linear Classical Field Theories                                          | 19  |
| E. Brüning                                                                                                  |     |
| A Note on Solutions of Two-dimensional Semilinear Elliptic Vector-Field Equations with Strong Non-linearity | 37  |
| T. Cazenave, F.B. Weissler                                                                                  |     |
| Some Remarks on the Non-linear Schrödinger Equation in the Subcritical Case                                 | 59  |
| J.-P. Dias, M. Figueira                                                                                     |     |
| The Cauchy Problem for the Dirac Equation with Cubic Non-linearity in Three Space Dimensions                | 71  |
| J. Ginibre, G. Velo                                                                                         |     |
| The Cauchy Problem for the Non-linear Klein-Gordon Equation                                                 | 79  |
| J. Ginibre, G. Velo                                                                                         |     |
| Conformal Invariance and Time Decay for Non-linear Wave Equations                                           | 91  |
| T. Hida, J. Potthoff, L. Streit                                                                             |     |
| Energy Forms and White Noise Analysis                                                                       | 115 |
| L. Vazquez                                                                                                  |     |
| Principles of Solitary Wave Stability                                                                       | 127 |
