Foreword (by Malte Henkel)	v
Preface	xxiii
1 Geometric Definitions of \mathfrak{sv}	1
1.1 From Newtonian Mechanics to the Schrödinger–Virasoro Algebra	1
1.1.1 From Galilei to Schrödinger: Central Extensions and Projective Automorphisms	3
1.1.2 From Schrödinger to Schrödinger–Virasoro	7
1.1.3 Our Object of Study: The Schrödinger–Virasoro Algebra in One Space Dimension	11
1.2 Integration of the Schrödinger–Virasoro Algebra to a Group	12
2 Basic Algebraic and Geometric Features	17
2.1 On Graduations and Some Deformations of the Lie Algebra \mathfrak{sv}	18
2.2 The Conformal Embedding	20
2.3 Relations Between \mathfrak{sv} and the Poisson Algebra on T^*S^1 and ‘no-go’ Theorem	23
2.4 Conformal and Schrödinger Tensor Invariants	27
3 Coadjoint Representation of the Schrödinger–Virasoro Group	31
3.1 Coadjoint Action of \mathfrak{sv}	32
3.2 Coadjoint Orbits of \mathfrak{sv}	37
4 Induced Representations and Verma Modules	43
4.1 Introduction and Notations	43
4.2 Kac Determinant Formula for $\text{Vect}(S^1) \ltimes \mathcal{F}_0$	46
4.3 Kac Determinant Formula for \mathfrak{sv}	52

5	Coinduced Representations	57
5.1	The Lie Algebra \mathfrak{sv} as a Cartan Prolongation	58
5.2	About Multi-Diagonal Differential Operators and Some Virasoro-Solvable Lie Algebras.....	61
5.3	Coinduced Representations of \mathfrak{sv}	68
5.4	Examples of Coinduced Representations	72
6	Vertex Representations	75
6.1	On the Extended Schrödinger–Virasoro Lie Algebra $\tilde{\mathfrak{sv}}$ and its Coinduced Representations	77
6.2	The Schrödinger–Virasoro Primary Fields and the Superfield Interpretation of $\tilde{\mathfrak{sv}}$	81
6.2.1	Definition of the Schrödinger–Virasoro Primary Fields	82
6.2.2	A Superfield Interpretation	86
6.3	Construction by $U(1)$ -Currents or $a\bar{b}$ -Theory	89
6.3.1	Definition of the $\tilde{\mathfrak{sv}}$ -Fields	89
6.3.2	Construction of the Generalized Polynomial Fields ${}_{\alpha}\Phi_{j,k}$	95
6.4	Correlators of the Polynomial and Generalized Polynomial Fields	106
6.5	Construction of the Massive Fields.....	111
7	Cohomology, Extensions and Deformations	125
7.1	Some Prerequisites About Lie Algebra Cohomology	126
7.2	Classifying Deformations of $\mathfrak{sv}(0)$	128
7.3	Computation of $H^2(\mathfrak{sv}_{\varepsilon}(0), \mathbb{R})$	138
7.4	About Deformations of $\mathfrak{sv}_1(0)$	141
7.5	Coming Back to the Original Schrödinger–Virasoro Algebra ...	144
8	Action of \mathfrak{sv} on Schrödinger and Dirac Operators	147
8.1	Definitions and Notations	148
8.2	Affine Schrödinger Cocycles	154
8.3	Action on Dirac–Lévy–Leblond Operators	157
9	Monodromy of Schrödinger Operators	161
9.1	Introduction	161
9.2	Classification of the Schrödinger Operators in $\mathcal{S}_{\leq 2}^{aff}$	167
9.2.1	Statement of the Problem and Connection with the Classification of Hill Operators	167
9.2.2	Classification of Hill Operators by the Lifted Monodromy	169
9.2.3	Kirillov’s Classification of Hill Operators by Isotropy Subgroups	172
9.2.4	Classification of the SV-Orbits in $\mathcal{S}_{\leq 2}^{aff}$	176
9.2.5	Connection to U. Niederer’s Results.....	181

9.3	Monodromy of Time-Dependent Schrödinger Operators of Non-resonant Types and Ermakov-Lewis Invariants	182
9.3.1	Ermakov-Lewis Invariants and Schrödinger–Virasoro Invariance	182
9.3.2	Solution of the Associated Classical Problem.....	189
9.3.3	Spectral Decomposition of the Model Operators	191
9.3.4	Monodromy of Non-resonant Harmonic Oscillators (Elliptic Case)	192
9.3.5	Monodromy of Harmonic Repulsors (Hyperbolic Type)	193
9.3.6	Monodromy of Non-resonant Operators of Unipotent Type	195
9.4	Symplectic Structures and General Solution of the Schrödinger Equation	196
10	Poisson Structures and Schrödinger Operators.....	207
10.1	Introduction	207
10.2	Algebras of Pseudodifferential Symbols	210
10.3	Time-Shift Transformation and Symmetries of the Free Schrödinger Equation	214
10.4	From Central Cocycles of $(\Psi D_r)_{\leq 1}$ to the Kac-Moody Algebra \mathfrak{g}	216
10.4.1	Central Cocycles of $(\Psi D_r)_{\leq 1}$	217
10.4.2	Introducing the Kac-Moody Type Lie Algebra \mathfrak{g}	219
10.5	Construction of the Embedding I of $(D\Psi D_\xi)_{\leq 1}$ into \mathfrak{g}	220
10.6	The Action of \mathfrak{sv} on Schrödinger Operators as a Coadjoint Action	221
10.7	Connection with the Poisson Formalism	226
11	Supersymmetric Extensions of the Schrödinger–Virasoro Algebra	231
11.1	On the Dirac-Lévy-Leblond Equation.....	233
11.2	Supersymmetry in Three Dimensions and Supersymmetric Schrödinger-Invariance	240
11.2.1	From $N = 2$ Supersymmetry to the Super-Schrödinger Equation	240
11.2.2	Dynamic Symmetries of the Super-Schrödinger Model	245
11.2.3	Some Physical Applications	248
11.2.4	Dynamic Symmetries of the $(3 2)$ -Supersymmetric Model.....	249
11.2.5	First Correspondence with Poisson Structures: The Super-Schrödinger Model	250

11.2.6	Second Correspondence with Poisson Structures: The Case of $\mathfrak{osp}(2 4)$, or the $(3 2)$ -Supersymmetric Model	254
11.3	Extended Super-Schrödinger Transformations	257
11.3.1	Elementary Examples	258
11.3.2	General Case	260
11.3.3	Study of the Case $N = 2$	264
11.4	Two-Point Functions	267
A	Appendix to Chapter 6	273
B	Appendix to Chapter 11	281
B.1	Supersymmetric Two-Point Functions	281
B.1.1	$\tilde{\mathfrak{z}}^{(1)}$ -Covariant Two-Point Functions	281
B.1.2	$\tilde{\mathfrak{z}}^{(2)}$ -Covariant Two-Point Functions	284
B.1.3	$\mathfrak{osp}(2 2)$ -Covariant Two-Point Functions	284
B.1.4	$\mathfrak{se}(3 2)$ -Covariant Two-Point Functions	288
B.1.5	$\mathfrak{osp}(2 4)$ -Covariant Two-Point Functions	289
B.2	Table of Lie Superalgebras	289
	References	293
	Index	299
