

Contents

1. Introduction. By E. D. HINKLEY

Glossary of Symbols	3
References	8

2. Remote Sensing for Air Quality Management. By S. H. MELFI (With 3 Figures)

2.1 The Atmosphere	10
2.1.1 Structure of the Atmosphere	10
2.1.2 Troposphere	12
Aerosols and Particles	12
Oxides of Carbon	14
Sulfur Compounds	15
Nitrogen Compounds	15
Hydrocarbons	16
Ozone	17
2.1.3 Stratosphere	17
Aerosols and Particles	17
Minor Molecular Constituents	18
2.2 General Pollution Transport Modeling	19
2.2.1 Description of Mathematical Models	20
2.2.2 Monitoring Needed for Model Development and Validation	21
2.3 Remote Monitoring Capabilities of Laser Systems	21
2.3.1 Single-Ended Systems	22
LIDAR	22
Raman LIDAR	23
Resonance LIDAR	23
Differential Absorption Scattering LIDAR	23
Raman LIDAR for Visibility	24
2.3.2 Double-Ended Systems	24
Bistatic LIDAR	24
Long Path Absorption	25

2.4 Remote Monitoring in Air Quality Management	25
2.4.1 Advantages of Remote Monitoring	26
Non-Interfering	26
Integrated-Path Measurements	26
Measurements at Ground Level and Aloft	26
Perspective in Monitoring	27
Measurement Over Large Geographical Areas	27
2.4.2 Applications of Remote Monitoring	27
2.5 Conclusion	28
References	28

3. Laser-Light Transmission Through the Atmosphere. By V. E. ZUEV (With 7 Figures)

3.1 Molecular Absorption	29
3.1.1 Basic Definitions	29
3.1.2 Absorption by a Separate Line	32
3.1.3 General Characteristics of Absorption Spectra of Atmospheric Gases	36
3.1.4 Experiments	41
3.1.5 Theory	47
3.1.6 Limits of Applicability of Bouguer's Law to Absorption	48
3.2 Molecular Scattering	52
3.3 Particulate Scattering	53
3.3.1 Scattering Coefficient; Absorption Coefficient; Attenuation Coefficient	53
3.3.2 Scattering by a Single Particle	54
3.3.3 Scattering by Clouds and Fogs	55
3.3.4 Scattering by Hazes	56
3.3.5 Scattering by Precipitations	58
3.3.6 Aerosol Scattering Phase Functions	58
3.3.7 Limits of Applicability of Bouguer's Law to Scattering	59
3.4 Total Attenuation: Wavelength Regions Efficient for Laser Sounding of the Atmosphere	59
3.4.1 Nonturbid Atmosphere	59
3.4.2 Hazes	61
3.4.3 Clouds and Fogs	62
3.4.4 Precipitations	63
3.5 Models of the Atmosphere	63

3.6 Deviations from Homogeneity	64
3.6.1 Effects of Atmospheric Turbulence	64
3.6.2 Scintillation Due to Aerosols	66
References	67

4. Lidar Measurement of Particles and Gases by Elastic Backscattering and Differential Absorption. By R. T. H. COLLIS and P. B. RUSSELL
(With 22 Figures)

4.1 Background Information	71
4.2 Principles of Light Detection and Ranging with Lasers (LIDAR)	73
4.2.1 The Lidar Equation	76
4.2.2 Lidar Systems and Equipment	78
Lasers	79
Detectors	80
Optical Components	80
Data Acquisition, Display, and Processing	80
System Integration	81
4.2.3 Eye Safety	87
4.3 Atmospheric Interactions Determining the Received Lidar Signal	87
4.3.1 Elastic Backscattering	89
Backscattering from Gas Molecules	89
Backscattering from Particles	90
4.3.2 Attenuation	97
Attenuation Due to Gas Molecules	97
Attenuation Due to Particles	98
4.3.3 Multiple Scattering	100
4.4 The Differential Absorption Lidar Technique	102
4.4.1 Principles of Operation	103
4.4.2 Measurement Sensitivity	104
4.4.3 Potential Errors	107
4.5 Interpretation of Single-Wavelength Lidar Measurements in Terms of Atmospheric Significance	109
4.5.1 Semi-Quantitative Mapping and Monitoring of Particulate Material	109
4.5.2 Solution of the Lidar Equation	110
4.5.3 Deriving Aerosol Physical Quantities from Optical Measurements	112
4.6 Examples of Lidar Measurements	117
4.6.1 Elastic Backscatter Applications	118
Observations of Clouds and Fog	118
Observations in Visually "Clear" Air	124
Observations of Atmospheric Motion	137

4.6.2	Differential Absorption Applications	140
	Water Vapor	140
	Pollutant Gases	141
4.7	Conclusions	143
4.7.1	Present Capabilities and Limitations	143
4.7.2	Future Prospects	144
	References	145
5.	Detection of Atoms and Molecules by Raman Scattering and Resonance Fluorescence. By H. INABA (With 26 Figures)	
5.1	Scattering and Fluorescence Mechanisms	153
5.2	Basic Properties of Raman Scattering and Resonance Fluorescence	158
5.2.1	Raman Scattering	158
5.2.2	Difference Between Resonance Raman Scattering and Fluorescence	164
5.2.3	Near-Resonance Raman Scattering	168
5.2.4	Resonance Scattering	174
5.2.5	Fluorescence and Its Quenching in the Atmosphere	178
5.3	Operational Principles and Characteristics of the Laser Radar Method Using Raman Scattering and Resonance Fluorescence	183
5.3.1	Basic Concept and Laser Radar Equation	183
5.3.2	Atmospheric Transmittance and Extinction	186
5.3.3	Basic Characteristics and Comparison of Raman Scattering and Resonance Fluorescence Schemes	187
5.3.4	Principle of Atmospheric Temperature Measurements by the Raman Scattering Method	189
5.4	Experimental Laser Radar Systems and Measurements	192
5.4.1	Raman Scattering Scheme	192
	Detection of Major Molecular Components in the Atmosphere	192
	Measurement of H ₂ O Vapor Profile in the Atmosphere	194
	Monitoring Molecular Pollutants in the Atmosphere	197
	Remote Measurements of Atmospheric Temperature	203
5.4.2	Resonance Fluorescence Scheme for Detection of Atoms in the Upper Atmosphere	205
5.4.3	Laboratory Experiments with the Resonance Fluorescence Method	210
5.5	Detection Sensitivity and System Performance of Laser Radar Monitoring	212
5.5.1	Detection Methods and Signal-to-Noise Ratio of the Receiving System	213

5.5.2	Detection Capability of the Raman Scattering Scheme for Ground-Based Monitoring of the Lower and Upper Atmosphere	216
5.5.3	Detection Capability of Near-Resonance Raman Scattering and Resonance Scattering Schemes in the Lower Atmosphere	220
5.5.4	Detection Capability of the Resonance Fluorescence Scheme for Ground-Based Monitoring of the Lower and Upper Atmosphere	225
5.5.5	Detection Capability of Airborne and Balloon-Borne Probing and Satellite Measurements	231

 6. Techniques for Detection of Molecular Pollutants by Absorption of Laser Radiation. By E.D.HINKLEY, R.T.KU, and P.L.KELLEY (With 22 Figures)		
6.1	Absorption Spectra of Molecular Pollutants	238
6.1.1	Relationship Between Type of Molecular Excitation and Spectral Region	238
6.1.2	Characteristics of Absorption Lines	240
6.2	Lasers for Monitoring Applications	247
6.2.1	Dye Lasers	249
6.2.2	Optical Mixers and Parametric Oscillators	249
6.2.3	Semiconductor Diode Lasers	252
6.2.4	Spin-Flip Raman Lasers	254
6.2.5	High Pressure Gas Lasers	255
6.2.6	Tunable Laser Summary	256
6.3	Signal Detection Techniques	256
6.3.1	Direct Photon Detection	256
	Room-Temperature Infrared Detectors	258
	Cooled Infrared Detectors	259
6.3.2	Opto-Acoustic Detection	260
6.3.3	Heterodyne Detection	265
6.4	Monitoring by Differential Absorption—Theory	266
6.4.1	Discrete-Wavelength Monitoring	266
6.4.2	Derivative Monitoring	269
	Derivative Monitoring of Doppler-Broadened Lines	269
	Derivative Monitoring of Pressure-Broadened Lines	271
	Derivative Monitoring of Lines in the Voigt Regime	273
6.5	Monitoring by Differential Absorption—Applications	274
6.5.1	Point Sampling of Molecular Pollutants	275
	Ambient Air Sampling	275

Vehicle Exhaust Sampling	277
Stack Gas Sampling	278
6.5.2 In situ Localized Monitoring	280
Vehicle Exhaust Monitoring	280
Stack-Gas Monitoring	281
Tropospheric and Stratospheric in situ Monitoring	282
6.5.3 Long-Path Atmospheric Monitoring	284
Long-Path Monitoring with Discretely-Tunable Lasers	284
Long-Path Monitoring with Continuously-Tunable Lasers	285
Vertical Profile Monitoring	287
6.6 Laser Safety	289
6.7 Conclusion	290

7. Laser Heterodyne Detection Techniques. By R. T. MENZIES (With 9 Figures)

7.1 Principles of Heterodyne Radiometry	298
7.1.1 Thermal Radiation	298
7.1.2 The Dicke Microwave Radiometer	300
7.1.3 Photomixing in the Infrared	302
7.1.4 Signal-to-Noise Considerations	306
The Local Oscillator Fluctuation Limit	306
Additional Noise Sources	312
7.2 The Passive Heterodyne Radiometer	314
7.2.1 Gas Emissivities in the Infrared	314
7.2.2 Component Requirements	317
Local Oscillator	317
Photomixer	319
7.2.3 Experimental Heterodyne Detection of Gases	321
7.2.4 A Comparison with the Michelson Interferometer-Spectrometer	325
7.2.5 Ground Monitoring Applications	327
7.2.6 Airborne Monitoring Applications	328
7.2.7 Turbulence Effects on Passive Heterodyne Radiometry	333
7.3 Heterodyne Techniques in Active Monitoring Systems	335
7.3.1 Sensitivity Improvements with Heterodyning	335
cw Transmitters	335
Pulsed Transmitters	336
7.3.2 Atmosphere-Induced Degradation of Bistatic System Performance	337
Turbulence Effects	337
Aerosol Backscattering Effects	339

7.3.3 Pollutant Detection Experiments with a Bistatic System	340
7.3.4 The Airborne Laser Absorption Spectrometer . . .	344
7.4 Future Improvements in Spectral Flexibility	347
7.4.1 Infrared Diode Lasers	347
7.4.2 High Pressure Gas Lasers	348
7.4.3 Parametric Oscillators	349
7.4.4 Photodiode Varactor Mixers	349
7.5 Conclusion	349
