## Part IV      Polarized Solid Targets

---

|                                                                                                                                                                                                                |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| First Use of the Polarized Target Facility at Fermilab<br>By P. Chaumette, J. Derégl, H. Desportes, G. Durand,<br>J. Fabre, D. Hill, T. Kasprzyk, L. van Rossum, and J. Sheppard<br>(With 3 Figures) . . . . . | 237 |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|

|                                                                                                                                                                                                                                                                                                       |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>The Bonn Frozen Spin Target for Experiments with Real Photons</b><br>By H. Dutz, S. Goertz, D. Krämer, W. Meyer,<br>G. Reicherz, L. Reichertz, W. Thiel, A. Thomas, and J. Weber<br>(With 2 Figures) . . . . .                                                                                     | 241 |
| <b>The PSI Frozen-Spin Target</b><br>By B. van den Brandt, J.A. Konter, S. Mango, and M. Weßler<br>(With 2 Figures) . . . . .                                                                                                                                                                         | 245 |
| <b>Spin Physics in CHAOS</b><br>By E.L. Mathie, B. van den Brandt, J.A. Konter, and S. Mango<br>(With 3 Figures) . . . . .                                                                                                                                                                            | 249 |
| <b>The New Polarized Target Facility</b><br>at the Kharkov Institute of Physics and Technology<br>By V.P. Androsov, A.A. Belyaev, V.A. Get'man, A.P. Dzyubak,<br>I.M. Karnaukhov, A.A. Lukhanin, Yu.P. Popkov, P.V. Sorokin,<br>E.A. Sporov, Yu.N. Telegin, and I.A. Tolmachev (With 3 Figures) . . . | 253 |
| <b>A Cryostat for Sample Irradiations in Liquid Argon</b><br>By V.A. Get'man, A.A. Belyaev, A.P. Dzyubak, I.M. Karnaukhov,<br>A.A. Lukhanin, N.V. Sorokin, E.A. Sporov, and I.A. Tolmachev<br>(With 2 Figures) . . . . .                                                                              | 257 |
| <b>A Multipurpose Q-Meter with Switching Phase Shift Detector</b><br>By N.A. Bazhanov and A.I. Kovaljov (With 3 Figures) . . . . .                                                                                                                                                                    | 261 |
| <b>Design Considerations for Variable-Frequency<br/>Pulsed NMR Deuteron Polarization Measurement</b><br>By T.O. Niinikoski, H. Garchette, H. Johansson, A. Rijllart,<br>L. Klostermann, and S. Dhawan (With 1 Figure) . . . . .                                                                       | 266 |
| <b>Instrumentation for the Two-Litre Polarized Target<br/>of the SMC NA47 Experiment</b><br>By A. Rijllart, T.O. Niinikoski, N. Hayashi, and R. Ent<br>(With 3 Figures) . . . . .                                                                                                                     | 272 |
| <b>The PSI NMR-System for Polarized Targets</b><br>By M. Weßler, J. Böhrer, B. van den Brandt, J.A. Konter,<br>and S. Mango (With 5 Figures) . . . . .                                                                                                                                                | 277 |
| <b>Calculation and Simulation of the Deuteron NMR Spectrum in<br/>Propanediol</b><br>By S. Dhawan, J. Reynolds, K. Morimoto, and G. Court<br>(With 5 Figures) . . . . .                                                                                                                               | 282 |

|                                                                                                                                                                                                                                                                                                 |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Polarization Studies with Radiation Doped Ammonia at 5 T and 1 K<br>By D.G. Crabb (With 14 Figures) . . . . .                                                                                                                                                                                   | 289 |
| Polarization Behaviour of NH <sub>3</sub> at 3.5 Tesla<br>and in the Frozen Spin Mode<br>By K.H. Althoff, H. Dutz, S. Goertz, D. Krämer,<br>W. Meyer, L. Reichertz, G. Reicherz, W. Thiel,<br>A. Thomas, and J. Weber (With 5 Figures) . . . . .                                                | 301 |
| DNP of <sup>15</sup> NH <sub>3</sub><br>By B. van den Brandt, J.A. Konter, S. Mango, and M. Weßler<br>(With 3 Figures) . . . . .                                                                                                                                                                | 307 |
| Butanol in the Frozen Spin Mode<br>By H. Dutz, S. Goertz, D. Krämer, W. Meyer,<br>L. Reichertz, G. Reicherz, W. Thiel, A. Thomas, and J. Weber<br>(With 3 Figures) . . . . .                                                                                                                    | 311 |
| LAMPF Polarized <sup>13</sup> C Targets<br>By S. Penttilä, J.J. Jarmer, N. Tanaka, M.L. Barlett,<br>K. Johnson, G.W. Hoffmann, W. Kielhorn, M. Purcell,<br>G. Burleson, A. Klein, G. Kyle, B. Brinkmöller, D. Dehnhard, Yi-<br>Fen Yen, J.R. Comfort, and J.J. Görgen (With 1 Figure) . . . . . | 315 |
| Results from the PSI <sup>6</sup> LiD Target<br>By B. van den Brandt, J.A. Konter, S. Mango, and M. Weßler<br>(With 4 Figures) . . . . .                                                                                                                                                        | 320 |
| Comparison of Polarized Target Materials in Different Magnetic Fields<br>By S. Trentalange, G. Baum, E. Bunyatova, B. van den Brandt,<br>P. Hautle, R. Ent, J.A. Konter, S. Mango, T. Niinikoski, A. Rijllart,<br>S. Takala, and M. Weßler (With 1 Figure) . . . . .                            | 325 |
| Dynamic Polarization of Solid <sup>3</sup> He<br>By P.P.J. Delheij, H. Postma, and K. Bindels (With 2 Figures) . . . . .                                                                                                                                                                        | 328 |
| Investigation of Organic Substances for Development of Targets<br>with Polarized Hydrogen and Deuterium Nuclei<br>By E.I. Bunyatova (With 5 Figures) . . . . .                                                                                                                                  | 333 |
| Progress in the Chemistry of Chromium(V) Doping Agents<br>Used in Polarized Target Materials<br>By M. Krumpolc, D. Hill, and H.B. Stuhmann (With 2 Figures) . . . . .                                                                                                                           | 340 |
| Some Metal Complexes as Free Radicals for Polarized Targets<br>By N. Nakasuka (With 1 Figure) . . . . .                                                                                                                                                                                         | 344 |

|                                                                                                                                                                                                                                                            |     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Measurements of Glass Properties and Density<br>of Hydrocarbon Mixtures of Interest in Polarized Targets<br>By S. Takala and T.O. Niinikoski (With 8 Figures) . . . . .                                                                                    | 347 |
| Low Temperature Thermal Properties of Pentanol-2 –<br>A Perspective Polarized Target Material<br>By S. Sahling (With 2 Figures) . . . . .                                                                                                                  | 353 |
| Determination of Polarization Parameters<br>of a Polarized Deuteron Target by Experimental Data<br>By M. Liburg (With 1 Figure) . . . . .                                                                                                                  | 358 |
| DNP with Inhomogeneously Broadened ESR Lines<br>By T.O. Niinikoski and R. de Koker . . . . .                                                                                                                                                               | 363 |
| Polarization Reversal by Adiabatic Fast Passage<br>in Deuterated Alcohols<br>By P. Hautle, W. Gruebler, J.A. Konter, A.I. Kovalev, S. Mango,<br>B. Van den Brandt, and M. Weßler (With 5 Figures) . . . . .                                                | 364 |
| Computer Controlled Microwave System<br>for CERN-SMC Polarized Target<br>By S. Ishimoto, R. Ent, J.F.M. van Gelder, T. Hasegawa, N. Hayashi,<br>N. Horikawa, T. Iwata, T.O. Niinikoski, S. Okumi, H. Postma,<br>and A. Rijllart (With 3 Figures) . . . . . | 369 |
| NMR Data Taking System by Personal Computer PC9801 (NEC)<br>Presented by T. Iwata (With 5 Figures) . . . . .                                                                                                                                               | 372 |
| A Remark on Nuclear Spin-Lattice Relaxation<br>By M. Liburg and V. Matafonov (With 2 Figures) . . . . .                                                                                                                                                    | 376 |
| Heat Sinking of Cryogenic Coaxial Cables in a Dilution Refrigerator<br>By L. Klostermann, S. Trentalange, B. Ritzi, H.C. Wen,<br>and T.O. Niinikoski (With 6 Figures) . . . . .                                                                            | 378 |
| Density Measurement of Solid Butanol by $\gamma$ -ray Attenuation<br>By S. Robinson, R. Henneck, I. Sick, B. van den Brandt, J.A. Konter,<br>and S. Mango (With 2 Figures) . . . . .                                                                       | 385 |
| List of Participants . . . . .                                                                                                                                                                                                                             | 388 |
