|--------------------------------------------------------------------------------------------------------------------------|-----------|
| <b>1 Basic Types of Surface Acoustic Waves in Solids</b>                                                                 | <b>1</b>  |
| 1.1 Rayleigh Waves                                                                                                       | 1         |
| 1.2 Gulyaev–Bleustein Waves                                                                                              | 5         |
| 1.3 Love Waves and Other Shear Surface Waves                                                                             | 9         |
| 1.4 Waves in Plates and Layered Structures                                                                               | 11        |
| 1.5 Surface Waves in Crystals                                                                                            | 14        |
| <br>                                                                                                                     |           |
| <b>2 Interaction of Surface Acoustic waves With Electrons and Influence of Substrate Environment on Wave Propagation</b> | <b>18</b> |
| 2.1 General                                                                                                              | 18        |
| 2.2 Acoustoelectronic Amplification of Surface Waves                                                                     | 20        |
| 2.3 Nonlinear Acoustoelectronic Effects                                                                                  | 24        |
| 2.4 Interaction of Surface Waves in Piezoelectrics with Electron Beams in a Vacuum                                       | 26        |
| 2.5 Acoustic Transfer of Charges                                                                                         | 27        |
| 2.6 Rayleigh Wave Attenuation Caused by Gas Load                                                                         | 29        |
| 2.7 Stoneley Waves on the Interface between a Solid and a Fluid                                                          | 30        |
| 2.8 “Viscosity” Shear Surface Waves                                                                                      | 31        |
| <br>                                                                                                                     |           |
| <b>3 Impedance Method in the Theory of Surface Waves in Inhomogeneous and Layered Media</b>                              | <b>35</b> |
| 3.1 Concept of Surface Impedance                                                                                         | 35        |
| 3.2 Equation for the Surface Impedance Matrix                                                                            | 38        |
| 3.3 Layered Anisotropic Medium                                                                                           | 45        |
| 3.4 Energy Relations                                                                                                     | 47        |
| 3.5 Layered Isotropic Elastic Medium                                                                                     | 53        |
| 3.6 Impedance of a Piezoelectric of Class $C_{6v}$                                                                       | 57        |
| 3.7 Energy Flux and Density for Classical Types of Surface Waves                                                         | 60        |
| 3.8 Scattering of Surface Waves by Weak Inhomogeneities in Born’s Approximation                                          | 65        |

|                                                                                                                      |            |
|----------------------------------------------------------------------------------------------------------------------|------------|
| <b>4 Scattering of Surface Waves by Local Irregularities</b>                                                         | <b>72</b>  |
| 4.1 Impedance of a Layered Half-space<br>with a Thin Irregular Layer                                                 | 72         |
| 4.2 Scattering by Irregularities of a Projection<br>and a Hollow Type                                                | 74         |
| 4.3 Angles of Zero Scattering                                                                                        | 76         |
| 4.4 Scattering of Rayleigh Waves                                                                                     | 78         |
| 4.5 Transformation into Bulk Waves                                                                                   | 86         |
| 4.6 Scattering of Gulyaev-Bleustein Waves<br>by Two-dimensional Boundary Irregularities                              | 92         |
| 4.7 Impedance of Elastic Half-space with Bulk Irregularities                                                         | 95         |
| 4.8 Scattering by Cylindrical and Wedge-like Irregularities                                                          | 97         |
| <b>5 Second Order Effects in Surface Wave Scattering<br/>by a Rectangular Projection</b>                             | <b>105</b> |
| 5.1 Iteration Method                                                                                                 | 105        |
| 5.2 Equation for the Surface Impedance                                                                               | 106        |
| 5.3 A Rectangular Projection in the Case of Horizontally<br>Polarized Waves: An Exact Solution for Surface Impedance | 108        |
| 5.4 Second Order Effects in a Scattered Field<br>of Horizontally Polarized Waves                                     | 110        |
| 5.5 Parameters of Scattering for Love Waves                                                                          | 117        |
| 5.6 A Rectangular Projection in the Case<br>of Vertically Polarized Waves                                            | 119        |
| 5.7 Scattering of the Rayleigh Wave                                                                                  | 121        |
| <b>6 Propagation of Surface Acoustic Waves<br/>in Small Scale Periodic Structures</b>                                | <b>124</b> |
| 6.1 General Notion                                                                                                   | 124        |
| 6.2 Surface Transverse Waves on a Rough Surface                                                                      | 127        |
| 6.3 Shear Waves on a Periodically Perturbed Interface                                                                | 131        |
| 6.4 Surface Skimming Bulk Waves<br>and Surface Transverse Waves in Crystals                                          | 133        |
| <b>7 Bragg Reflection of Surface Waves</b>                                                                           | <b>139</b> |
| 7.1 Background of the Problem                                                                                        | 139        |
| 7.2 Reflection of Rayleigh Waves from Sinusoidal Irregularities<br>on a Substrate Surface                            | 141        |
| 7.3 Weighted Reflectors                                                                                              | 146        |
| 7.4 Bragg Reflection in the Case of Oblique Incidence<br>on a Grating                                                | 150        |
| 7.5 Case of Finite Beam Aperture                                                                                     | 157        |

|           |                                                                                                                                              |            |
