

# Table of Contents

<b>Preface</b>	<b>3</b>
<b>Introduction</b>	<b>5</b>
<b>Part 1: The formulation of <i>Interaction Theory</i></b>	<b>14</b>
1.1. The <i>Interaction Theory</i>	14
1.2. The framework to study generation sequences	19
1.3. The fate of generation sequences	23
1.4. The niche requirements of generation sequences	29
1.5. The two fundamental types of niche	34
1.6. The role and significance of reproductive interactions	37
1.7. Symbiosis and generation sequences	50
1.8. Complexity increase and the probability of multiplication	54
1.9. A rising probability of multiplication	63
1.10. The way in which the probability of multiplication can rise	72
1.11. Environmental changes and complexity increase	86
1.12. The law-like process of complexity increase	100
<b>Part 2: The course of complexity increase during evolution</b>	<b>104</b>
2.1. The journey of generation sequences through deep time	104
2.2. From molecules to prokaryotes	107
2.3. The emergence of eukaryotes	117
2.4. The emergence of sexual reproduction	127
2.5. The evolution of sexually reproducing species	133
2.6. Species with social interaction	143
2.7. The evolution of <i>Homo sapiens</i>	148
<b>Part 3: What is life?</b>	<b>161</b>
<b>Part 4: The consequences of <i>Interaction Theory</i> beyond biology</b>	<b>164</b>
<b>Flowchart 1</b>	<b>172</b>
<b>Annex</b>	<b>173</b>
<b>Notes</b>	<b>179</b>
