

Contents

List of Abbreviations	xiii
Symbols	xv
1 Introduction	1
2 Cooling System and Power Density	3
2.1 Cooling Modes	4
2.1.1 Influence of Cooling Systems on Power Density	4
2.1.2 Maximum Potential of Cooling Modes Regarding Power Density	8
2.2 Cooling Medium	13
2.2.1 Overview of Studied Fluids	13
2.2.2 Heating of the Fluid	17
2.2.3 Convective Heat Transfer	21
2.2.4 Flow Resistance	25
2.2.5 Influence of Cooling Medium on Power Density	29
2.3 Conclusions and Discussion	31
3 Heat Sources and Heat Sinks in Electrical Machines	33
3.1 Losses in Electrical Machines	34
3.1.1 Electromagnetic Properties of Studied Induction Ma- chine	34
3.1.2 Overview of the Loss Calculation Methodology	35
3.1.3 Stator Current Heat Losses	37
3.1.4 Iron Losses	42
3.1.5 Rotor Current Heat Losses	47
3.1.6 Friction and Windage Losses	51
3.1.7 Distribution of Losses of in Torque-Speed Maps	53
3.2 Stator Cooling Systems	55
3.2.1 Overview of Stator Cooling Systems	55
3.2.2 Influence of Stator Heat Sink Locations on the Power Density	59

Contents

3.3	Rotor Cooling Systems	63
3.3.1	Overview of Rotor Cooling Systems	63
3.3.2	Influence of Rotor Heat Sink Locations on the Power Density	66
3.4	Studied Induction Machine and Cooling Systems	71
3.5	Conclusions and Discussion	73
4	Characteristic Thermal Design Parameters	75
4.1	Selection of Characteristic Design Parameters	75
4.1.1	Heat Transfer of The Cooling Circuit	75
4.1.2	Heat Transfer in the Air Gap	76
4.1.3	Heat Transfer in The End-Winding Area	79
4.1.4	Material Interfaces	81
4.1.5	Slot Liner	82
4.1.6	Impregnation Material	84
4.1.7	Soft Magnetic Material	86
4.2	Sensitivity Study of Characteristic Parameters	88
4.2.1	Studied Cooling Systems and Operational Points	88
4.2.2	Methodology and Boundary Conditions	90
4.2.3	Influence of the Characteristic Thermal Parameters on the Power Density	92
4.3	Conclusions and Discussion	97
5	Prototype Cooling System	99
5.1	Overview of the Prototype Cooling System and Prototyping Process	99
5.2	Thermal Models	106
5.3	Test Bench Setup	113
5.4	Conclusions and Discussion	117
6	Measurements and Verification	119
6.1	Losses of the Developed Induction Machine	119
6.1.1	Control Strategy and Torque Capability	120
6.1.2	Losses of the Electromagnetic Energy Conversion Process	123
6.1.3	Influence of Inverter Switching on Stator Current Heat Losses	127
6.1.4	Friction and Windage Losses	130
6.2	Thermal Properties of the Developed Induction Machine	138
6.2.1	Thermal Heat Flow in the Stator	139
6.2.2	Thermal Heat Flow in the Rotor	146

6.2.3	Pressure Drop of the Cooling System	156
6.3	Increasing the Power Density with Cooling Systems	163
6.4	Conclusions and Discussion	169
7	Conclusions and Outlook	173
Appendices		177
A.1	Cooling Concepts for High Power Density Electrical Machines	178
A.1.1	Cooled Stator Component	178
A.1.2	Cooled Rotor Component	189
A.1.3	Cooling Medium in Stator and Rotor	193
A.1.4	Flow Adjustment in Stator and Rotor	197
A.1.5	Flow Guidance Stator	199
A.1.6	Flow Guidance Rotor	203
A.1.7	Conclusions and Discussion	204
B.2	Dimensionless Correlations for Electrical Machines	206
B.2.1	Heat Transfer in Stationary Cooling Ducts	206
B.2.2	Heat Transfer in the Air Gap	215
B.2.3	Windage Losses in the Air Gap	220
C.3	Thermal Conductivity of the Soft Magnetic Material	226
C.3.1	Analytical Formula for the Thermal Conductivity	227
C.3.2	Experimental Evaluation of the Thermal Conductivity	233
C.3.3	Verification of the Thermal Conductivity Study	239
Literature		245
Own Publications		267
Supervised Final Theses		271
Curriculum Vitae		273
