Part I Introduction

1 Principles of X-Ray Imaging	3
1.1 Projection Radiography and Fluoroscopy	3
1.2 Computed Tomography	5
References	7
2 Structure of the Book	9
2.1 Part II: Physical Principles	9
2.2 Part III: Clinical Applications	9
2.3 Part IV: Supplement	10
2.4 CD-ROM	10
References	10

Part II Physical Principles

3 Production and Measurement of X-Rays	13
3.1 Production	13
3.2 Measuring Photon Spectra of Diagnostic X-Rays	17
3.2.1 X-Ray Spectrometer	17
3.2.2 Measuring	18
3.2.3 Corrections for Detector Influences	18
3.2.4 Preparing for Calculations with X-Ray Spectra	19
References	19
4 Interaction of Photons with Matter	21
4.1 Exponential Law of Attenuation	21
4.2 Interaction Processes	21
4.2.1 Compton Effect	22
4.2.2 Photoelectric Effect	23
4.2.3 Rayleigh Scattering	25
4.3 Total Coefficients for Attenuation, Energy Transfer and Energy Absorption	25
References	31
5 Radiation Field and Dosimetric Quantities	33
5.1 General Radiation Field Characteristics	33
5.2 Characteristics of the Radiation Field in Projection Radiography and Fluoroscopy	35
5.3 Characteristics of the Radiation Field in Computed Tomography	35

5.4	Dosimetric Quantities for the Description of Radiation Exposure	36
5.5	Effect of Filtration	37
	References	39
6	Penetration of X-Rays	41
6.1	Attenuation by the Patient	41
6.1.1	Simulation of Attenuation by the Patient	42
6.1.2	Basis of Exposure Tables	43
6.2	Attenuation by the Patient Support and the Components of the Imaging Device	46
6.2.1	Patient Support	46
6.2.2	Anti-scatter Grid	47
6.2.3	Ionisation Chamber	48
6.2.4	Geometry	48
6.3	Important Differences Between Over-Table and Under-Table X-Ray Units	50
6.4	Characteristics of Computed Tomography	51
	References	51
7	Scattered Radiation	53
7.1	Measurement of Scattered Radiation	53
7.2	Properties of Scattered Radiation	56
7.2.1	Radiography and Fluoroscopy	56
7.2.2	Mammography	56
7.2.3	Computed Tomography	58
7.3	Techniques in Radiography and Fluoroscopy to Reduce Scattered Radiation at the Image Receptor	58
7.3.1	Air-Gap Technique	58
7.3.2	Slot Technique	59
7.3.3	Anti-scatter Grid	59
7.4	Quantities for the Description of the Characteristics of Grids	60
7.5	Derived Quantities for the Description of the Efficiency of Anti-scatter Grids	62
7.6	Application Limits for Focused Grids	63
	References	65
8	Image Receptors	67
8.1	Characteristics of Phosphor Screens	68
8.2	Digital Image Receptors and CT Receptors	70
8.3	Automatic Exposure Control	73
8.3.1	Direct Technique (in Connection with Film-Screen Systems)	73
8.3.2	Fluoroscopy and Indirect Technique (in Connection with an Image Intensifier)	75
8.3.3	Digital Imaging (Using Flat Panel Detectors)	76
8.3.4	Computed Tomography	78
8.4	Image Receptor Dose/Dose Rate (System Dose/Dose Rate)	78
8.4.1	Analogue Image Receptors	78
8.4.2	Digital Image Receptors	81
	References	82
9	Image Quality and Dose	85
9.1	Characteristics of Image Receptors	86
9.2	Contrast	87
9.3	Sharpness	89
9.4	Noise	92

9.5	Signal-to-Noise Ratio	93
9.6	Detective Quantum Efficiency	94
9.7	Other Image-Quality Figures	96
9.8	Dependence of Image Quality on Exposure Parameters	98
9.9	Detection of Covered Structures in the X-Ray Image	99
	References	99

Part III Clinical Applications

10	Evaluation of Dose to the Patient	105
10.1	Specific Dosimetric Quantities Used for Patient-Dose Evaluation	105
10.2	Quantities Influencing Patient Dose	106
10.3	Initial Dosimetric Quantities for the Estimation of Organ Doses	109
10.4	Determination of the Initial Dosimetric Quantities	109
10.4.1	Radiography	109
10.4.2	Fluoroscopy	111
10.4.3	Mammography	111
10.4.4	Computed Tomography	112
10.5	Estimation of Organ Doses from the Initial Dosimetric Quantities	112
10.5.1	Estimation of Organ Doses H_T by the Use of Conversion Factors	112
10.5.2	Estimation of the Absorbed Dose to an Organ D_{org} by the Use of Tissue-Air Ratios or Relative Depth Doses	115
10.6	Estimation of Effective Dose	116
10.7	Uncertainties in Patient-Dose Estimation	117
	References	119
11	Scattered Radiation	121
11.1	Influence on Image Quality and Dose	121
11.2	The Various Types of Anti-scatter Grids	123
11.2.1	Employment of Grids in Paediatrics	123
11.2.2	Employment of Grids in Mammography	125
11.2.3	Employment of Grids in Digital Radiography	127
11.2.4	Cone-Beam Computed Tomography (CBCT)	129
	References	131
12	Optimisation of Image Quality and Dose	133
12.1	General X-Ray Diagnostics	133
12.2	Angiography	134
12.3	Mammography	137
12.4	Computed Tomography	142
	References	143

Part IV Supplement

13	X-Ray Spectra	151
13.1	General X-Ray Diagnostics	151
13.2	Mammography	162
14	Interaction Coefficients	181
14.1	Elements	181
14.2	Compounds and Mixtures	188

15	Characteristics of the Primary Radiation Beam	199
15.1	General X-Ray Diagnostics	199
15.2	Mammography	236
16	Characteristics of the Imaging Radiation Field	257
16.1	General X-Ray Diagnostics	257
16.2	Mammography	283
17	Miscellaneous	285
17.1	Penetration and Absorption of X-rays	285
17.2	X-ray Detectors	286
17.3	Image Quality Figures	291
18	Patient Dose Estimation	293
18.1	General X-Ray Diagnostics	293
18.2	Mammography	298
