Part I. Algebraic Varieties in a Projective Space

Chapter I. Fundamental Concepts

§ 1.	Plane Algebraic Curves	3
	1. Rational Curves	3
	2. Connections with the Theory of Fields	8
	3. Birational Isomorphism of Curves	11
	Exercises	13
§ 2.	Closed Subsets of Affine Spaces	14
	1. Definition of Closed Subset	14
	2. Regular Functions on a Closed Set	16
	3. Regular Mappings	18
	Exercises	21
§ 3.	Rational Functions	22
	1. Irreducible Sets	22
	2. Rational Functions	24
	3. Rational Mappings	25
	Exercises	30
§ 4.	Quasiprojective Varieties	30
	1. Closed Subsets of a Projective Space	30
	2. Regular Functions	33
	3. Rational Functions	38
	4. Examples of Regular Mappings	40
	Exercises	41
§ 5.	Products and Mappings of Quasiprojective Varieties	41
	1. Products	41
	2. Closure of the Image of a Projective Variety	44
	3. Finite Mappings	47
	4. Normalization Theorem	52
	Exercises	52
§ 6.	Dimension	53
	1. Definition of Dimension	53
	2. Dimension of an Intersection with a Hypersurface	56
	3. A Theorem on the Dimension of Fibres	60
	4. Lines on Surfaces	62
	5. The Chow Coordinates of a Projective Variety	65
	Exercises	69

Chapter II. Local Properties

§ 1. Simple and Singular Points	71
1. The Local Ring of a Point	71
2. The Tangent Space	72
3. Invariance of the Tangent Space	74
4. Singular Points	77
5. The Tangent Cone	79
Exercises	80
§ 2. Expansion in Power Series	81
1. Local Parameters at a Point	81
2. Expansion in Power Series	84
3. Varieties over the Field of Real and the Field of Complex Numbers	88
Exercises	89
§ 3. Properties of Simple Points	90
1. Subvarieties of Codimension 1	90
2. Smooth Subvarieties	93
3. Factorization in the Local Ring of a Simple Point	94
Exercises	97
§ 4. The Structure of Birational Isomorphisms	98
1. The σ -Process in a Projective Space	98
2. The Local σ -Process	100
3. Behaviour of Subvarieties under a σ -Process	103
4. Exceptional Subvarieties	104
5. Isomorphism and Birational Isomorphism	105
Exercises	108
§ 5. Normal Varieties	109
1. Normality	109
2. Normalization of Affine Varieties	113
3. Ramification	115
4. Normalization of Curves	120
5. Projective Embeddings of Smooth Varieties	123
Exercises	126

Chapter III. Divisors and Differential Forms

§ 1. Divisors	127
1. Divisor of a Function	127
2. Locally Principal Divisors	131
3. How to Shift the Support of a Divisor Away from Points	134
4. Divisors and Rational Mappings	135
5. The Space Associated with a Divisor	137
Exercises	139
§ 2. Divisors on Curves	140
1. The Degree of a Divisor on a Curve	140
2. Bezout's Theorem on Curves	144
3. Cubic Curves	145
4. The Dimension of a Divisor	146
Exercises	147

§ 3.	Algebraic Groups	148
1.	Addition of Points on a Plane Cubic Curve	148
2.	Algebraic Groups	150
3.	Factor Groups. Chevalley's Theorem	151
4.	Abelian Varieties	152
5.	Picard Varieties	153
	Exercises	155
§ 4.	Differential Forms	156
1.	One-Dimensional Regular Differential Forms	156
2.	Algebraic Description of the Module of Differentials	159
3.	Differential Forms of Higher Degrees	161
4.	Rational Differential Forms	163
	Exercises	165
§ 5.	Examples and Applications of Differential Forms	166
1.	Behaviour under Mappings	166
2.	Invariant Differential Forms on a Group	168
3.	The Canonical Class	170
4.	Hypersurfaces	171
5.	Hyperelliptic Curves	175
6.	The Riemann-Roch Theorem for Curves	176
7.	Projective Immersions of Surfaces	178
	Exercises	180

Chapter IV. Intersection Indices

§ 1.	Definition and Basic Properties	182
1.	Definition of an Intersection Index	182
2.	Additivity of the Intersection Index	185
3.	Invariance under Equivalence	187
4.	End of the Proof of Invariance	191
5.	General Definition of the Intersection Index	194
	Exercises	197
§ 2.	Applications and Generalizations of Intersection Indices	198
1.	Bezout's Theorem in a Projective Space and Products of Projective Spaces	198
2.	Varieties over the Field of Real Numbers	199
3.	The Genus of a Smooth Curve on a Surface	202
4.	The Ring of Classes of Cycles	206
	Exercises	207
§ 3.	Birational Isomorphisms of Surfaces	208
1.	σ -Processes of Surfaces	208
2.	Some Intersection Indices	209
3.	Elimination of Points of Indeterminacy	210
4.	Decomposition into σ -Processes	212
5.	Notes and Examples	214
	Exercises	216

Part II. Schemes and Varieties

Chapter V. Schemes

§ 1.	Spectra of Rings	223
1.	Definition of a Spectrum	223
2.	Properties of the Points of a Spectrum	226
3.	The Spectral Topology	228
4.	Irreducibility, Dimension	230
	Exercises	233
§ 2.	Sheaves	234
1.	Presheaves	234
2.	The Structure Presheaf	235
3.	Sheaves	238
4.	The Stalks of a Sheaf	241
	Exercises	242
§ 3.	Schemes	242
1.	Definition of a Scheme	242
2.	Pasting of Schemes	246
3.	Closed Subschemes	248
4.	Reducibility and Nilpotents	250
5.	Finiteness Conditions	252
	Exercises	253
§ 4.	Products of Schemes	254
1.	Definition of a Product	254
2.	Group Schemes	257
3.	Separation	258
	Exercises	262

Chapter VI. Varieties

§ 1.	Definition and Examples	263
1.	Definitions	263
2.	Vector Bundles	268
3.	Bundles and Sheaves	270
4.	Divisors and Line Bundles	277
	Exercises	281
§ 2.	Abstract and Quasiprojective Varieties	282
1.	Chow's Lemma	282
2.	The σ -Process along a Subvariety	283
3.	Example of a Non-Quasiprojective Variety	287
4.	Criteria for Projectiveness	292
	Exercises	293
§ 3.	Coherent Sheaves	294
1.	Sheaves of Modules	294
2.	Coherent Sheaves	298
3.	Dévissage of Coherent Sheaves	300
4.	The Finiteness Theorem	304
	Exercises	305

Part III. Algebraic Varieties over the Field of Complex Numbers and Complex Analytic Manifolds

Chapter VII. Topology of Algebraic Varieties

§ 1.	The Complex Topology	309
1.	Definitions	309
2.	Algebraic Varieties as Differentiable Manifolds. Orientation	311
3.	The Homology of Smooth Projective Varieties	313
	Exercises	318
§ 2.	Connectedness	318
1.	Auxiliary Lemmas	319
2.	The Main Theorem	320
3.	Analytic Lemmas	322
	Exercises	324
§ 3.	The Topology of Algebraic Curves	325
1.	The Local Structure of Morphisms	325
2.	Triangulation of Curves	327
3.	Topological Classification of Curves	329
4.	Combinatorial Classification of Surfaces	333
§ 4.	Real Algebraic Curves	336
1.	Involutions	337
2.	Proof of Harnack's Theorem	338
3.	Ovals of Real Curves	340
	Exercises	341

Chapter VIII. Complex Analytic Manifolds

§ 1.	Definitions and Examples	343
1.	Definition	343
2.	Factor Spaces	345
3.	Commutative Algebraic Groups as Factor Spaces	348
4.	Examples of Compact Analytic Manifolds that are not Isomorphic to Algebraic Varieties	351
5.	Complex Spaces	357
	Exercises	359
§ 2.	Divisors and Meromorphic Functions	360
1.	Divisors	360
2.	Meromorphic Functions	362
3.	Siegel's Theorem	365
	Exercises	368
§ 3.	Algebraic Varieties and Analytic Manifolds	369
1.	Comparison Theorem	369
2.	An Example of Non-Isomorphic Algebraic Varieties that are Isomorphic as Analytic Manifolds	372
3.	Example of a Non-Algebraic Compact Manifold with the Maximal Number of Independent Meromorphic Functions	375
4.	Classification of Compact Analytic Surfaces	377
	Exercises	378

Chapter IX. Uniformization

§ 1.	The Universal Covering	380
1.	The Universal Covering of a Complex Manifold	380
2.	Universal Coverings of Algebraic Curves	382
3.	Projective Embeddings of Factor Spaces	384
	Exercises	386
§ 2.	Curves of Parabolic Type	386
1.	θ -Functions	386
2.	Projective Embedding	388
3.	Elliptic Functions, Elliptic Curves, and Elliptic Integrals	389
	Exercises	392
§ 3.	Curves of Hyperbolic Type	393
1.	Poincaré Series	393
2.	Projective Embedding	395
3.	Algebraic Curves and Automorphic Functions	398
	Exercises	400
§ 4.	On the Uniformization of Manifolds of Large Dimension	401
1.	Simple Connectivity of Complete Intersections	401
2.	Example of a Variety with a Preassigned Finite Fundamental Group	402
3.	Notes	406
	Exercises	408
Bibliography		409
Historical Sketch		411
1.	Elliptic Integrals	412
2.	Elliptic Functions	413
3.	Abelian Integrals	415
4.	Riemann Surfaces	417
5.	The Inversion Problem	419
6.	Geometry of Algebraic Curves	421
7.	Many-Dimensional Geometry	423
8.	The Analytic Theory of Manifolds	426
9.	Algebraic Varieties over an Arbitrary Field. Schemes	428
Bibliography for the Historical Sketch		431
Subject Index		433
List of Notation		438
