

Contents

1	Introduction	1
2	Method of Coherent States	4
2.1	Introduction to the Coherent States	4
2.2	Some Properties of Boson Coherent States	8
2.3	Some Properties of Spin Coherent States	13
3	The Exact C-Number Equation for Time-Dependent Expectation Values in Coherent States	16
3.1	Exact C-Number Equation for Quantum Expectation Values: Time-Independent Boson Hamiltonians in Coherent States	17
3.2	Generalization for the Case of Any Number of Degrees of Freedom	20
3.3	Example: Dynamics of Expectation Values for a Nonlinear Quantum Oscillator	21
3.4	Nonlinear Representation of Expectation-Value Dynamics	24
3.5	Exact C-Number Equation for Quantum Expectation Values: Time-Independent Spin Hamiltonians in Coherent States	26
3.6	Exact C-Number Equation for Quantum Time-Dependent Expectation Values for Boson-Spin Hamiltonians with Arbitrary Number of Degrees of Freedom	28
3.7	Dynamics of Quantum Correlation Functions	30
3.8	Generalization of C-Number Equations in the Case of Time-Dependent Hamiltonians	30
4	Quasiclassical Perturbation Theory for Time-Dependent Expectation Values with Quantum Nonlinear Hamiltonians	32
4.1	Quasiclassical Dynamical Perturbation Theory for Linear C-Number Equations	32

4.2	Nonlinear Dynamical Perturbation Theory for Time-Dependent Expectation Values	35
5	The Characteristic Times of Violation of Quasiclassical Approximation for Integrable Boson and Spin Systems	40
5.1	The Characteristic Times of Violation of Quasiclassical Approximation for Integrable Boson Systems	41
5.2	Violation of Quasiclassical Approximation upon Taking into Account an Additional Averaging over the Initial Density Matrix	46
5.3	Time-Behavior of Quantum Correlation Functions	51
5.4	The Characteristic Times of Violation of Quasiclassical Approximation for Integrable Quantum Nonlinear Spin Systems	52
5.5	Application of the Dynamical Perturbation Theory in Deriving the Time-Scale $\tau_{\hbar}$	58
5.6	The Time-Scale $\tau_{\hbar}$ for the One-Dimensional Einstein Gas	61
5.7	Conclusion	62
6	Time-Scale $\tau_{\hbar}$ for a Kicked Quantum Nonlinear Oscillator	64
6.1	Quantum Map for C-Number Expectation Values . .	66
6.2	Classical Limit	69
6.3	The Time-Scale $\tau_{\hbar}$ of Applicability of Classical Chaotic Motion	72
6.4	Quantum Boundary of Stochasticity	75
6.5	Additional Averaging over the Initial Density Matrix	78
7	The Time of Applicability of the Quasiclassical Approach in a Boson System of Two Interacting Quantum Nonlinear Resonances	79
7.1	The Main Equations	80

7.2	Classical Limit	83
7.3	The Results of Numerical Simulations of Quantum Dynamics	84
7.4	Conclusion	88
8	Two Interacting Quantum Nonlinear Resonances in a Spin System	89
8.1	Introduction	89
8.2	Time-Independent Hamiltonian and Closed C-Number Equations	90
8.3	The Approximation of Constant Amplitude of the External Field	92
8.4	Time-Dependent Quantum Correlation Functions	94
8.5	Quantum Perturbation Theory	95
9	Quantization of a Stochastic Web	103
9.1	Introduction	103
9.2	Quantum Map	104
9.3	Classical Limit	105
9.4	Equation for the Generating Function	107
9.5	The Region of Parameters for Quasiclassical Consideration	109
9.6	Time-Scale of Quasiclassical Description for Strong Chaos	112
9.7	Quantum Dynamics in the Region of Weak Chaos . .	114
9.7.1	Time-Scale $n_{\hbar}$ for Quantum Map	114
9.7.2	The Influence of the Initial Conditions	117
9.8	Conclusion	127
10	Characteristic Times for Chaotic Dynamics in Wigner Representation	129
10.1	Introduction	129
10.2	The S-Ordered Quantum Density Matrix	130
10.3	Wigner Representation in "Action-Angle" Variables .	135
10.4	Evolution of the Quantum Kicked Rotator in the Wigner Representation	138

10.5	Quantum Equations of Motion	142
10.6	Classical Model of Quantum Stochasticity	146
10.7	Discussion	156
11	Quantum Chaos of Atoms in a Resonant Cavity	157
11.1	Introduction	157
11.2	Quantum Equations of Motion	160
11.3	Closed Equations of Motion for the Quantum-Mechanical Expectation Values	163
11.4	Quantum Correlation Functions	168
11.5	Breaking the Semiclassical Approximation	169
11.6	Results of Numerical Analysis	171
11.7	Conclusion	177
12	Quantum Chaos of Atoms in a Resonant Cavity Driven by an External Resonant Field	178
12.1	Introduction	178
12.2	The Formulation of the Model	180
12.3	Time-Independent Hamiltonian for Slow Dynamics	184
12.4	Closed C-Number Equations for Quantum Expectation Values in Coherent States	186
12.5	Semiclassical Approximation and Chaotic Dynamics	190
12.6	The Peculiarities of Quantum Dynamics in the Regime of Strong Semiclassical Chaos	195
12.7	Additional Averaging over the Initial Density Matrix	200
12.8	Conclusion	202
13	Violation of the Semiclassical Approximation and Quantum Chaos in a Paramagnetic Spin System	204
13.1	Introduction	204
13.2	Description of the Paramagnetic Spin Model	205
13.3	Slow Dynamics and Its Time-Independent Hamiltonian	211
13.4	Conclusion	212

14 Weak Quantum Chaos in a System of N Atoms in a Resonant Cavity Interacting with an External Resonant Field	214
14.1 The Nonsingular Representation in the Vicinity of Separatrix	216
14.2 Equations for Quantum Expectation Values	218
14.3 Semiclassical Consideration	219
14.4 Dynamics of Expectation Values and Quantum Correlation Functions in the Integrable Limit	219
14.5 Numerical Calculations of Weak Quantum Chaos	232
14.6 Conclusion	235
15 Quantum Dynamics in Stationary Coherent States (SCS)	236
15.1 Introduction	236
15.2 Stationary Coherent States. Basic Equations	237
15.3 Dynamical Chaos in SCS	240
15.4 Stability of SCS	243
15.5 Diffusion in SCS	243
15.6 Strange Attractor in SCS	244
16 Discussion	247
Appendix A	251
Appendix B	255
Appendix C	256
