Part I Theory of Elasticity

1. The Main Types of Strain in Elastic Solids	2
1.1 Equations of Linear Elasticity Theory	2
1.1.1 Hooke's Law	2
1.1.2 Differential Form of Hooke's Law. Principle of Superposition	3
1.2 Homogeneous Strains	4
1.2.1 An Elastic Body Under the Action of Hydrostatic Pressure	4
1.2.2 Longitudinal Strain with Lateral Displacements Forbidden	5
1.2.3 Pure Shear	6
1.3 Heterogeneous Strains	8
1.3.1 Torsion of a Rod	8
1.3.2 Bending of a Beam	10
1.3.3 Shape of a Beam Under Load	11
1.4 Exercises	12
2. Waves in Rods, Vibrations of Rods	18
2.1 Longitudinal Waves	18
2.1.1 Wave Equation	18
2.1.2 Harmonic Waves	19
2.2 Reflection of Longitudinal Waves	19
2.2.1 Boundary Conditions	19
2.2.2 Wave Reflection	20
2.3 Longitudinal Oscillations of Rods	22
2.4 Torsional Waves in a Rod. Torsional Vibrations	23
2.5 Bending Waves in Rods	24
2.5.1 The Equation for Bending Waves	24
2.5.2 Boundary Conditions. Harmonic Waves	26
2.5.3 Reflection of Waves. Bending Vibrations	27
2.6 Wave Dispersion and Group Velocity	28
2.6.1 Propagation of Nonharmonic Waves	28
2.6.2 Propagation of Narrow-Band Disturbances	29
2.7 Exercises	30

3. General Theory of Stress and Strain	39
3.1 Description of the State of a Deformed Solid	39
3.1.1 Stress Tensor	39
3.1.2 The Strain Tensor	41
3.1.3 The Physical Meaning of the Strain Tensor's Components	42
3.2 Equations of Motion for a Continuous Medium	44
3.2.1 Derivation of the Equation of Motion	44
3.2.2 Strain-Stress Relation. Elasticity Tensor	45
3.3 The Energy of a Deformed Body	45
3.3.1 The Energy Density	45
3.3.2 The Number of Independent Components of the Elasticity Tensor	47
3.4 The Elastic Behaviour of Isotropic Bodies	48
3.4.1 The Generalized Hooke's Law for an Isotropic Body	48
3.4.2 The Relationship Between Lamé's Constants and E and ν	48
3.4.3 The Equations of Motion for an Isotropic Medium	49
3.5 Exercises	50
4. Elastic Waves in Solids	55
4.1 Free Waves in a Homogeneous Isotropic Medium	55
4.1.1 Longitudinal and Transverse Waves	55
4.1.2 Boundary Conditions for Elastic Waves	58
4.2 Wave Reflection at a Stress-Free Boundary	59
4.2.1 Boundary Conditions	59
4.2.2 Reflection of a Horizontally Polarized Wave	60
4.2.3 The Reflection of Vertically Polarized Waves	61
4.2.4 Particular Cases of Reflection	63
4.2.5 Inhomogeneous Waves	64
4.3 Surface Waves	65
4.3.1 The Rayleigh Wave	65
4.3.2 The Surface Love Wave	66
4.3.3 Some Features of Love's Waves	68
4.4 Exercises	70
5. Waves in Plates	75
5.1 Classification of Waves	75
5.1.1 Dispersion Relations	75
5.1.2 Symmetric and Asymmetric Modes	76
5.1.3 Cut-Off Frequencies of the Modes	77
5.1.4 Some Special Cases	79
5.2 Normal Modes of the Lowest Order	79
5.2.1 Quasi-Rayleigh Waves at the Plate's Boundaries	79
5.2.2 The Young and Bending Waves	81
5.3 Equations Describing the Bending of a Thin Plate	82
5.3.1 Thin Plate Approximation	82

5.3.2 Sophie Germain Equation	84
5.3.3 Bending Waves in a Thin Plate	85
5.4 Exercises	86

Part II Fluid Mechanics

6. Basic Laws of Ideal Fluid Dynamics	92
6.1 Kinematics of Fluids	92
6.1.1 Eulerian and Lagrangian Representations of Fluid Motion	92
6.1.2 Transition from One Representation to Another	92
6.1.3 Convected and Local Time Derivatives	93
6.2 System of Equations of Hydrodynamics	95
6.2.1 Equation of Continuity	95
6.2.2 The Euler Equation	95
6.2.3 Completeness of the System of Equations	96
6.3 The Statics of Fluids	98
6.3.1 Basic Equations	98
6.3.2 Hydrostatic Equilibrium. Väisälä Frequency	99
6.4 Bernoulli's Theorem and the Energy Conservation Law	100
6.4.1 Bernoulli's Theorem	100
6.4.2 Some Applications of Bernoulli's Theorem	102
6.4.3 The Bernoulli Theorem as a Consequence of the Energy-Conservation Law	103
6.4.4 Energy Conservation Law in the General Case of Unsteady Flow	104
6.5 Conservation of Momentum	106
6.5.1 The Specific Momentum Flux Tensor	106
6.5.2 Euler's Theorem	107
6.5.3 Some Applications of Euler's Theorem	109
6.6 Vortex Flows of Ideal Fluids	110
6.6.1 The Circulation of Velocity	110
6.6.2 Kelvin's Circulation Theorem	111
6.6.3 Helmholtz Theorems	112
6.7 Exercises	113
7. Potential Flow	121
7.1 Equations for a Potential Flow	121
7.1.1 Velocity Potential	121
7.1.2 Two-Dimensional Flow. Stream Function	122
7.2 Applications of Analytical Functions to Problems of Hydrodynamics	124
7.2.1 The Complex Flow Potential	124
7.2.2 Some Examples of Two-Dimensional Flows	125

7.2.3 Conformal Mapping	127
7.3 Steady Flow Around a Cylinder	129
7.3.1 Application of Conformal Mapping	129
7.3.2 The Pressure Coefficient	131
7.3.3 The Paradox of d'Alembert and Euler	132
7.3.4 The Flow Around a Cylinder with Circulation	133
7.4 Irrotational Flow Around a Sphere	134
7.4.1 The Flow Potential and the Particle Velocity	134
7.4.2 The Induced Mass	136
7.5 Exercises	137
8. Flows of Viscous Fluids	145
8.1 Equations of Flow of Viscous Fluid	145
8.1.1 Newtonian Viscosity and Viscous Stresses	145
8.1.2 The Navier-Stokes Equation	146
8.1.3 The Viscous Force	148
8.2 Some Examples of Viscous Fluid Flow	149
8.2.1 Couette Flow	149
8.2.2 Plane Poiseuille Flow	150
8.2.3 Poiseuille Flow in a Cylindrical Pipe	151
8.2.4 Viscous Fluid Flow Around a Sphere	153
8.2.5 Stokes' Formula for Drag	154
8.3 Boundary Layer	156
8.3.1 Viscous Waves	157
8.3.2 The Boundary Layer. Qualitative Considerations	157
8.3.3 Prandl's Equation for a Boundary Layer	160
8.3.4 Approximate Theory of a Boundary Layer in a Simple Case	162
8.4 Exercises	163
9. Elements of the Theory of Turbulence	169
9.1 Qualitative Considerations. Hydrodynamic Similarity	169
9.1.1 Transition from a Laminar to Turbulent Flow	169
9.1.2 Similar Flows	171
9.1.3 Dimensional Analysis and Similarity Principle	173
9.1.4 Flow Around a Cylinder at Different Re	174
9.2 Statistical Description of Turbulent Flows	177
9.2.1 Reynolds' Equation for Mean Flow	177
9.2.2 Turbulent Viscosity	180
9.2.3 Turbulent Boundary Layer	181
9.3 Locally Isotropic Turbulence	184
9.3.1 Properties of Developed Turbulence	184
9.3.2 Statistical Properties of Locally Isotropic Turbulence	186
9.3.3 Kolmogorov's Similarity Hypothesis	190
9.4 Exercises	191

10. Surface and Internal Waves in Fluids	197
10.1 Linear Equations for Waves in Stratified Fluids	197
10.1.1 Linearization of the Hydrodynamic Equations	197
10.1.2 Linear Boundary Conditions	198
10.1.3 Equations for an Incompressible Fluid	199
10.2 Surface Gravity Waves	200
10.2.1 Basic Equations	200
10.2.2 Harmonic Waves	201
10.2.3 Shallow- and Deep-Water Approximations	204
10.2.4 Wave Energy	205
10.3 Capillary Waves	207
10.3.1 “Pure” Capillary Waves	207
10.3.2 Gravity-Capillary Surface Waves	208
10.4 Internal Gravity Waves	210
10.4.1 Introductory Remarks	210
10.4.2 Basic Equation for Internal Waves. Boussinesq Approximation	211
10.4.3 Waves in an Unlimited Medium	212
10.5 Guided Propagation of Internal Waves	216
10.5.1 Qualitative Analysis of Guided Propagation	216
10.5.2 Simple Model of an Oceanic Waveguide	218
10.5.3 Surface Mode. “Rigid Cover” Condition	220
10.5.4 Internal Modes	221
10.6 Exercises	224
11. Waves in Rotating Fluids	236
11.1 Inertial (Gyroscopic) Waves	236
11.1.1 The Equation for Waves in a Homogeneous Rotating Fluid	236
11.1.2 Plane Harmonic Inertial Waves	237
11.1.3 Waves in a Fluid Layer. Application to Geophysics ...	239
11.2 Gyroscopic-Gravity Waves	241
11.2.1 General Equations. The Simplest Model of a Medium	241
11.2.2 Classification of Wave Modes	242
11.2.3 Gyroscopic-Gravity Waves in the Ocean	243
11.3 The Rossby Waves	246
11.3.1 The Tangent of β -Plane Approximation	246
11.3.2 The Barotropic Rossby Waves	247
11.3.3 Joint Discussion of Stratification and the β -Effect ...	248
11.3.4 The Rossby Waves in the Ocean	251
11.4 Exercises	253
12. Sound Waves	262
12.1 Plane Waves in Static Fluids	262
12.1.1 The System of Linear Acoustic Equations	262
12.1.2 Plane Waves	263

12.1.3	Generation of Plane Waves. Inhomogeneous Waves . .	265
12.1.4	Sound Energy	267
12.2	Sound Propagation in Inhomogeneous Media	269
12.2.1	Plane Wave Reflection at the Interface of Two Homogeneous Media	269
12.2.2	Some Special Cases. Complete Transparency and Total Reflection	271
12.2.3	Energy and Symmetry Considerations	272
12.2.4	A Slowly-Varying Medium. Geometrical-Acoustics Approximation	274
12.2.5	Acoustics Equations for Moving Media	278
12.2.6	Guided Propagation of Sound	280
12.3	Spherical Waves	282
12.3.1	Spherically-Symmetric Solution of the Wave Equation	282
12.3.2	Volume Velocity or the Strength of the Source. Reaction of the Medium	283
12.3.3	Acoustic Dipole	285
12.4	Exercises	286
13.	Magnetohydrodynamics	295
13.1	Basic Concepts of Magnetohydrodynamics	295
13.1.1	Fundamental Equations	295
13.1.2	The Magnetic Pressure. Freezing of the Magnetic Field in a Fluid	296
13.1.3	The Poiseuille (Hartmann) Flow	298
13.2	Magnetohydrodynamic Waves	300
13.2.1	Alfvén Waves	300
13.2.2	Magnetoacoustic Waves	302
13.2.3	Fast and Slow Magnetoacoustical Waves	304
13.3	Exercises	305
14.	Nonlinear Effects in Wave Propagation	308
14.1	One-Dimensional Nonlinear Waves	308
14.1.1	The Nonlinearity Parameter	308
14.1.2	Model Equation. Generation of Second Harmonics . .	309
14.1.3	The Riemann Solution. Shock Waves	311
14.1.4	Dispersive Media. Solitons	313
14.2	Resonance Wave Interaction	317
14.2.1	Conditions of Synchronism	317
14.2.2	The Method of Slowly-Varying Amplitudes	318
14.2.3	Multiwave Interaction	320
14.2.4	Nonlinear Dispersion	321
14.3	Exercises	322
	Appendix: Tensors	330
	Bibliographical Sketch	335
	Subject Index	339
