

Table of Contents

Chapter 1: Introduction	1
1.1 Summary.....	1
1.2 Terminology.....	3
1.2.1 Databases and Integrity	3
1.2.2 Actors on the Scene	7
1.3 Motivation.....	8
1.3.1 Claim 1: Selected Integrity Management Concepts Are Specifiable	10
1.3.2 Claim 2: Those Specifications Are Executable	10
1.4 Method	10
1.5 The Road Map.....	11
Chapter 2: The Context	13
2.1 Preliminaries	14
2.2 The "Standard" Perspective	15
2.2.1 Non-DBMS Approach	15
2.2.2 Hierarchical Approach.....	16
2.2.3 Network Approach	16
2.2.4 Relational Approaches	17
2.3 The Object-Oriented Perspective.....	20
2.3.1 General Concepts	21
2.3.1.1 Identity	21
2.3.1.2 Behavior	21
2.3.1.3 Associations	22
2.3.2 Concrete Approaches and Standards	24
2.4 Logical Perspective.....	29
2.4.1 Deductive Approaches.....	29
2.4.1.1 Relational Approaches	30
2.4.1.2 Object-Oriented Approaches	30
2.4.2 Temporal Approaches	31
2.4.3 Theorem Proving Approaches.....	32
2.5 The "Constructive" Perspective.....	33
2.5.1 Abstract-Machine-Based Approaches	34
2.5.2 Specification-Based Approaches.....	39
2.6 Other Perspectives	41
2.6.1 Distribution.....	42
2.6.2 Heterogeneity	42
2.7 A Classification.....	43
2.7.1 Transitions	44
2.7.1.1 Structure	44
2.7.1.2 Scope of Constraints	44
2.7.1.3 Scope Definition Responsibility	45
2.7.2 Conditions	47
2.7.2.1 Condition Language Concepts	47
2.7.2.2 Condition Definition Responsibility	48
2.7.2.3 Condition Evaluation Strategies	49

2.7.3	Reactions	50
2.7.3.1	Reaction Language Concepts	50
2.7.3.2	Reaction Definition Responsibility	50
2.7.3.3	Reaction Execution Context and Behavior	52
2.7.4	System Implementation	52
Chapter 3: The KIDS Project		55
3.1	Overall Goals	55
3.2	Initial DBMS Architecture.....	55
3.3	The Construction Life-Cycle	58
3.3.1	Analysis	58
3.3.2	Architecture Selection	59
3.3.3	Aspect Analysis	60
3.3.4	Architecture Refinement	61
3.3.5	Subsystem Realization.....	61
3.3.5.1	Generation	61
3.3.5.2	Configuration	61
3.3.5.3	Generation versus Configuration	62
3.3.6	Testing, Optimization, Extension, and Maintenance.....	63
3.4	The Construction System.....	63
Chapter 4: Data Model Specification		67
4.1	Requirements	68
4.2	Language Concepts.....	69
4.2.1	The Top-Level Language Concept for Specifying Data Models	71
4.2.2	The Overall Structure of Meta Concept Specifications	72
4.2.3	Identification	73
4.2.4	Refinement	74
4.2.5	Interfaces	75
4.2.5.1	Example	76
4.2.5.2	Typing Rules	77
4.2.6	Realization.....	79
4.2.6.1	Variables	79
4.2.6.2	Control Structures	79
4.2.6.3	Lambda Expressions	81
4.2.6.4	The Base Abstraction Used for Operation Realization	81
4.2.6.5	Example Operation Realizations	84
4.2.7	Specification Parameters	85
4.2.8	Specification Properties.....	87
4.2.8.1	Meta Object Types	88
4.2.8.2	Meta Association Types	88
4.2.9	Language Concepts Supporting Subsystem Validation	89
4.3	Discussion	92
Chapter 5: Integrity Model Specification		93
5.1	Requirements	93
5.2	Language Concepts.....	94
5.2.1	The Top-Level Language Concept for Specifying Integrity Models	95
5.2.2	Logical Languages.....	96
5.2.2.1	Function Symbols, Terms, and Variables	97
5.2.2.2	Term Evaluation	97
5.2.2.3	Examples: Basic Functions	100

5.2.2.4	Examples: Assertion and Referential Integrity Function Symbols	101
5.2.2.5	Examples: Aggregate Functions	104
5.2.2.6	Further Remarks on Term Composition	106
5.2.3	State Transitions	107
5.2.4	Reactions	108
5.2.5	Language Concepts Supporting Subsystem Validation	109
5.2.6	The Underlying Model	111
5.3	Discussion	113
Chapter 6: Implementation		115
6.1	Prelude	116
6.1.1	Target Programming Language and System Evaluation	116
6.1.2	Compiler Construction Method	117
6.1.2.1	Specification of the Lexer and the Parser	118
6.1.2.2	Issues in the Realization of the Semantic Analysis and Code Generation	118
6.1.2.3	Conclusions	118
6.2	Data Model Specification Language	118
6.2.1	Parse-Tree Design	118
6.2.2	The Run-Time Environment	121
6.2.3	The Mapping	121
6.3	Integrity Model Specification Language	124
6.3.1	Parse-Tree Design	124
6.3.2	The Run-Time Environment	124
6.3.2.1	Standard IMS Interface	124
6.3.2.2	Primitives Repository: Event Management	125
6.3.2.3	Realization of the Standard IMS Interface	128
6.3.3	Mapping	128
6.3.3.1	Function Symbol Specifications	128
6.3.3.2	Event Specifications	130
6.3.3.3	IMSL Programs	130
6.4	Conclusion	131
Chapter 7: Case Studies		133
7.1	Relational Integrity Concepts	133
7.1.1	Requirements	133
7.1.2	Specifications	135
7.1.2.1	DMSL Specifications	135
7.1.2.2	IMSL Specifications	138
7.1.3	Validation - The "Emp-Dept" Example	141
7.2	Object-Oriented Integrity Concepts	145
7.2.1	Requirements	145
7.2.1.1	Data Definition Facilities	145
7.2.1.2	Query Language and Data Manipulation Language	146
7.2.1.3	Summary of Inherent Integrity Constraints	146
7.2.1.4	Summary of Other Constraint Facilities	147
7.2.2	Specifications	148
7.2.2.1	DMSL Specifications	148
7.2.2.2	IMSL Specifications	152
7.2.3	Validation - The University Example	157
Chapter 8: Conclusions		163
8.1	Assessment	163

8.2 Further Research	164
8.2.1 DMSL	164
8.2.1.1 Persistence	164
8.2.1.2 Query Optimization	164
8.2.1.3 DBI vs. DBU	166
8.2.2 IMSL	166
8.2.2.1 Temporal Logic for Function Symbols	166
8.2.2.2 Composition of Terms	166
8.2.2.3 Run-Time-Systems	167
Appendix A Bibliography	169
Appendix B List of Figures	179
Appendix C DMSL Grammar Rules	181
Appendix D IMSL Grammar Rules	183
Appendix E ims.lisp	185
Appendix F detector.lisp	191
