CHAPTER 1: Introduction and Motivation 1

CHAPTER 2: Active Database Systems 5

2.1 The Notion of Active Database Systems 6

2.1.1 The Paradigm of Rules in Active Database Systems 7

2.1.2 Issues in Active Database Systems 9

2.1.2.1 Specifying Active Behaviour 9

2.1.2.2 Internal Processing of the Specified Active Behaviour 10

2.2 Architectures of Active Database Systems 12

2.2.1 Layered Architecture 12

2.2.2 Integrated Architecture 13

2.3 Applications 14

2.3.1 Application Areas of Active Database Systems 14

2.3.2 Application Development 16

2.4 Other Rule Paradigms 17

2.4.1 Expert Systems 17

2.4.2 Deductive Database Systems 18

2.5 Survey of Existing Work in Active Database Systems 18

2.5.1 Relational Approaches 19

2.5.2 Object-Oriented Approaches 20

2.5.3 Work on Further Aspects 21

2.5.4 Commercial Systems 22

2.6 Conclusions for Our Own Work 23

2.6.1 Integration of Active Mechanisms in an Object-Oriented Environment 23

2.6.2 Composite Event Specification and Detection 25

2.6.3 Implementation Approaches 25

PART I: SPECIFYING ACTIVE BEHAVIOUR IN SAMOS

CHAPTER 3: Rule Language 29

3.1 Specification of ECA-Rules 29

3.2 Specification of Conditions and Actions 30

3.3 Specification of Execution Constraints 31

3.3.1 Coupling Modes 31

3.3.2 Rule Ordering 32

3.4 Activation and Deactivation of Rules 33

3.5 Rule and Event Definitions as Part of the Schema 33

3.6 The Relation between Rules and Classes 34

3.6.1 Relation Based on the Definition of Rules 34

3.6.2 Relation Based on the System Representation of Rules 36

CHAPTER 4: Event Specification 37
4.1 The Notion of Time 37
4.1.1 Points in Time 38
4.1.1.1 Absolute Points in Time 38
4.1.1.2 Implicit Points in Time 40
4.1.1.3 Relative Points in Time 40
4.1.2 Time Intervals 40
4.2 Primitive Events 43
4.2.1 Time Events 43
4.2.2 Method Events 43
4.2.3 Value Events 45
4.2.4 Transaction Events 46
4.2.5 Abstract Events 46
4.3 Composite Events 47
4.3.1 Event Constructors 48
4.3.1.1 Conjunction 48
4.3.1.2 Sequence 48
4.3.1.3 Disjunction 48
4.3.1.4 The *- and the last-Constructor 49
4.3.1.5 TIMES Constructor 49
4.3.1.6 NOT Constructor 50
4.3.2 Nested Definition of Composite Events 50
4.4 Event Parameters 52
4.4.1 Event Parameters for Primitive Events 52
4.4.2 Event Parameters for Composite Events 53
4.4.3 Consumption Mode 54
4.4.4 Using Information Held in Parameters 55
4.4.5 Influence of Event Parameters on the Definition of Composite Events 55
4.4.6 same-Keyword vs. Parameter Checking as Part of the Condition 56
4.5 The Definition of Implicit Points in Time 57
4.6 Monitoring Intervals 57
4.6.1 Defining Monitoring Intervals 58
4.6.2 Monitoring Intervals and the Activate and Deactivate Operations 58
4.6.3 Monitoring Intervals and Composite Events 59
4.7 Examples 61

CHAPTER 5: Comparison With Other Rule Languages 67
5.1 Syntax of Rule Definitions 67
5.2 Specification of Events 68
5.3 Specification of Conditions and Actions 69
5.4 Execution Constraints 70
5.4.1 Coupling Modes 71

5.4.2 Rule Ordering 71
5.5 Additional Parts of a Rule 72
5.6 Advanced Event Specification Languages 73
5.6.1 Primitive Events 73
5.6.2 Composite Events 74
5.6.3 Parameters 76
5.6.4 Other Characteristics 77
5.6.5 Consumption Mode 77
5.6.6 Conclusion 78

PART II: INTERNAL PROCESSING OF ECA RULES IN SAMOS

CHAPTER 6: Detecting Composite Events 85
6.1 Place-Transition Petri Nets 87
6.2 Coloured Petri Nets 89
6.2.1 The Static Structure of CP-Nets 89
6.2.2 The Dynamic Behaviour of CP-Nets 91
6.2.3 An Example of Coloured Petri Nets 93
6.2.4 Conflicts in Coloured Petri Nets 94
6.3 SAMOS Petri Nets 95
6.3.1 Places 95
6.3.2 Token Types 95
6.3.3 Arc Expressions 97
6.3.4 Guard Expressions 98
6.3.5 S-PN as "conflict-free" Nets 98
6.3.6 Dynamic Behaviour of S-PN 99
6.4 Using S-PN for the Modelling of Composite Events 100
6.4.1 Constructors with Arity 2 100
6.4.1.1 The Disjunction Constructor 100
6.4.1.2 The Conjunction Constructor 101
6.4.1.3 The Sequence Constructor 102
6.4.2 Constructors with Arity 1 103
6.4.2.1 The TIMES Constructor 103
6.4.2.2 The *-Constructor 104
6.4.3 Events with Monitoring Intervals 104
6.4.4 Constructors with Arity 1 and Monitoring Intervals 107
6.4.4.1 The TIMES Constructor with a Monitoring Interval 107
6.4.4.2 The *- Constructor with a Monitoring Interval 108
6.4.4.3 The NOT Constructor 110
6.4.5 Constructors with Arity 2 and Monitoring Intervals 110
6.4.6 Nested Definition of Composite Events 112
6.4.6.1 *TIMES(n, E) IN [s - e] 112
6.4.6.2 (NOT E1 ; E2) 112

6.5 Modelling with Token Types, Arc and Guard Expressions 113
6.6 The Event Detector Based on the Model of S-PN 115
6.7 Cleaning Up the Combination S-PN 117
6.7.1 Remove Parts of the Combination S-PN 117
6.7.2 Remove Tokens from the Combination S-PN 117
6.8 Comparison to Other Work 117
6.8.1 The Automata Approach in Ode 118
6.8.2 The Tree Approach in Snoop 121

CHAPTER 7: Representation of the S-PN 123
7.1 Object-Oriented Representation 123
7.1.1 The Class "place" 123
7.1.2 The Class "transition" 124
7.1.3 The Class "arc" 124
7.1.4 The Class "token" 125
7.1.5 Interface to Other Structures 126
7.2 The Implementation of the Dynamic Behaviour of S-PN 126
7.3 Removal of Parts of the Combination S-PN 129
7.4 Vectorial Representation 129
7.5 Discussion 130

CHAPTER 8: The Architecture of SAMOS 131
8.1 Overview 131
8.2 Activities Caused By Rule Definition 134
8.2.1 Rule Schema 135
8.2.2 Setting Up SAMOS for Event Detection 137
8.2.2.1 Setting Up SAMOS for Detecting Primitive Events 138
8.2.2.2 Setting Up SAMOS for Detecting Composite Events 139
8.3 Activities Caused By Primitive Event Detection 139
8.4 Discussion of the Requirements 142
8.5 A Detailed Task Control Flow for SAMOS 143

CHAPTER 9: The Implementation of SAMOS 145
9.1 The Implementation Environment 145
9.2 Implementing SAMOS on Top of ObjectStore 146
9.2.1 Activities Caused By Rule Definition 146
9.2.2 Activities Caused By Primitive Event Detection 149
9.2.3 Conclusion 151
9.3 The Implementation of the Time Event Detector 152
9.3.1 An Introduction to the UNIX Cron-Process 152
9.3.2 Using Cron for the Detection of Time Events 153
9.3.2.1 Absolute Time Events 154
9.3.2.2 Relative Time Events 154
9.3.2.3 Periodically Reappearing Time Events 154
9.3.3 Conclusion 157

CHAPTER 10: A Comprehensive Example 159
10.1 Application 159
10.2 Tasks Performed By SAMOS 161

CHAPTER 11: Summary and Perspectives 165
11.1 Contributions 165
11.2 Directions for Future Work 166

APPENDIX A: Syntax of the Rule Language 169

APPENDIX B: List of Figures 173

APPENDIX C: List of Tables 175
