|--------------------------------------------------------------------------------------------------|------------|
| <b>List of Symbols and Abbreviations</b> . . . . .                                               | <b>1</b>   |
| <b>1 Introduction</b> . . . . .                                                                  | <b>3</b>   |
| <b>2 Optimal Experimental Design</b> . . . . .                                                   | <b>11</b>  |
| 2.1 Basics and Notation . . . . .                                                                | 12         |
| 2.2 Necessary and Sufficient Optimality Conditions . . . . .                                     | 19         |
| 2.3 Adaptive Discretization Algorithm . . . . .                                                  | 25         |
| 2.4 Algorithm for Minimax Optimal Designs . . . . .                                              | 31         |
| <b>3 Constrained Optimal Experimental Design</b> . . . . .                                       | <b>45</b>  |
| 3.1 Modeling of the Optimization Problem . . . . .                                               | 46         |
| 3.2 Lagrangian and Saddle Points . . . . .                                                       | 56         |
| 3.2.1 Sufficient Conditions for Solutions . . . . .                                              | 60         |
| 3.2.2 Necessary Conditions for Solutions . . . . .                                               | 61         |
| 3.3 Extension to Singular Constraints . . . . .                                                  | 69         |
| <b>4 Adaptive Discretization Algorithm for Constrained Optimal Experimental Design</b> . . . . . | <b>77</b>  |
| 4.1 Constraint Qualifications . . . . .                                                          | 79         |
| 4.2 Convergence Results . . . . .                                                                | 84         |
| 4.2.1 General Case . . . . .                                                                     | 87         |
| 4.2.2 Case with Singular Constraints . . . . .                                                   | 95         |
| 4.3 Refining the Discretization . . . . .                                                        | 102        |
| 4.4 Numerical Discussion . . . . .                                                               | 111        |
| <b>5 Multi-Criteria Optimal Experimental Design</b> . . . . .                                    | <b>117</b> |
| 5.1 Computing Pareto Optimal Designs . . . . .                                                   | 120        |
| 5.2 Approximating the Set of Efficient Designs . . . . .                                         | 124        |
| <b>6 Numerical Example from Process Engineering</b> . . . . .                                    | <b>137</b> |
| 6.1 Minimax Optimal Designs . . . . .                                                            | 141        |
| 6.2 Constrained Optimal Experimental Design . . . . .                                            | 143        |
| 6.3 Multi-Criteria Optimal Experimental Design . . . . .                                         | 147        |
| <b>7 Conclusion</b> . . . . .                                                                    | <b>153</b> |

|          |                                                               |            |
|----------|---------------------------------------------------------------|------------|
| <b>A</b> | <b>Appendix</b>                                               | <b>155</b> |
| A.1      | Convergence of the Minimax Adaptive Discretization Algorithm  | 155        |
| A.2      | Convergence of the Modified Adaptive Discretization Algorithm | 158        |
| A.3      | Eigenvalues of the Fisher Information Matrices                | 162        |
| A.4      | Reformulation of the Discretization Refinement Subproblem     | 165        |
|          | <b>Bibliography</b>                                           | <b>171</b> |
