How to Use this Book	IX
List of Figures	XIX
Abstract of Book	XXIII
1 Introduction	1
1.1 Comparison with Traditional Logic	1
1.2 The <i>IF THEN</i> Logic of Human Reasoning	9
1.3 Natural-Language-Independent Structures for the Representation of Verbally Formulated Knowledge*	13
1.4 Purpose of a Representation of Knowledge System*	18
1.5 Expressing and Updating Uncertainty and Ignorance in the Chain Set System	20
1.5.1 Probabilistic Answers to Questions	20
1.5.2 The Representation and Updating of Uncertainty and Ignorance in a Chain Set	20
1.6 Analytic versus Synthetic Truth and Information*	21
1.7 Existing Tools for Representation of Knowledge*	22
1.7.1 Conventional Databases	23
1.7.2 First order logic	23
1.7.3 Fuzzy Set Theory	24
1.7.4 TEE Model Fuzzy Set Theory	25
1.7.5 Semantic Networks	26
1.8 The Components of a Knowledge Representation System*	26
1.9 Terminology*	28
1.9.1 Introduction	28
1.9.2 Statement or Sentence versus Proposition	28
1.9.3 Knowledge, Data, Information	28
1.10 The Three Parts of this Book	30
I BP Logic	32
2 Chain Set and Probability Overview	33
2.1 Introduction	33
2.2 The Correct Use of Logical Words in Natural Language*	36

2.3	Connectives between Phrases	38
2.4	Terminology and Notation for Chain Sets*	40
2.4.1	Notation Overview	40
2.4.2	The Ambiguous Natural Language vs Chain Set Notation	44
2.5	The Meaning of Probabilities in Logic*	45
2.6	Compound Probabilities*	49
2.7	Exercises	51
3	BP Chain Sets I, Affirmation, Negation, Conjunction, Disjunction	52
3.1	Introduction	52
3.2	Chain Sets for Affirmation, Negation and Conjunction	53
3.3	Multiple-Column Chain Sets and Disjunction	55
3.3.1	Introduction	55
3.3.2	<i>ORE</i> and <i>ORA</i> Imply Uncertainty	55
3.3.3	The Possibility Row of a Chain Set	56
3.3.4	The Probability Row of a Chain Set	56
3.3.5	The Relation between Possibilities and Probabilities	57
3.3.6	Probabilistic Cardinality	57
3.4	Inversion for Negated Elements of the Ground Universe	58
3.5	Negated Composite Labels and the Complementation of Chain Sets	60
3.6	Prolongation, Expansion and Shortening of Chain Sets	61
3.7	Composite Labels with Composite Components	63
3.7.1	Conjunction of Composite Labels	63
3.7.2	Disjunction of Composite Labels	66
3.7.3	The Partition Theorem	67
3.7.4	Top-Down Construction*	68
3.8	Implementation of Chain Set Structures	69
3.9	Exercises	69
4	BP Chain Sets II, Special Cases of Chain Sets	70
4.1	Introduction	70
4.2	Contradictory versus No Information, Emptiness	71
4.2.1	Three Types of Empty Chain Sets	71
4.2.2	Contradictory Labels	73
4.2.3	The State of Ignorance	76
4.2.4	Ignorance and Bayes Postulate	78
4.3	Sets of Objects*	79
4.3.1	Introduction*	79
4.3.2	1C Chain Sets for Sets of Objects*	79
4.3.3	Updating the Knowledge Base*	82
4.3.4	Probabilistic Sets of Independent Objects*	84
4.3.5	Probabilistic Sets of Dependent Objects*	85
4.4	Probability Distributions as X1 Chain Sets*	86
4.4.1	Introduction*	86
4.4.2	A Simple Probability Distribution as an X1 Chain Set*	86
4.4.3	Possibilities and Probabilities*	89

4.4.4	Nonfuzzy Possibility or Threshold Curves *	92
4.4.5	Fuzzy Possibility or Threshold Curves *	93
4.5	Exercises	99
5	BP Chain Sets III, Precise Formulations*	103
5.1	Introduction	103
5.2	The Syntactic Form of a Logically Legal Label λ *	103
5.3	Equivalent Operations *	105
5.4	Some Fundamental Laws *	107
5.5	Equality of Meaning*	110
5.5.1	Introduction	110
5.5.2	A Notational Difficulty*	111
5.5.3	The Equivalence Operator of Propositional Calculus*	113
5.5.4	A Solution to the Equality of Meaning of Expressions*	114
5.5.5	Equal Representation for Equal-Meaning Sentences	120
5.5.6	Possible Worlds as Individual Knowledge Bases*	122
5.5.7	Semantic Synonyms*	124
5.5.8	Equality Laws*	126
5.5.9	Summary Concerning Equality of Meaning	127
5.6	Equal-Meaning Composite Labels and the Disjunctive Normal Form *	127
5.7	Exercises	130
6	Inferences or the Answering of Questions	131
6.1	Introduction	131
6.2	The Answer Procedure for Non-IF THEN Questions	134
6.3	IF THEN Questions	137
6.3.1	Introduction	137
6.3.2	The Procedure for Answering IF THEN Questions	138
6.3.3	Nonsensical IF THEN Questions	141
6.4	Comparison with Propositional Calculus *	142
6.4.1	Introduction	142
6.4.2	Terminology	143
6.4.3	Truth Tables vs Chain Sets, Traditional Inference vs Answer Procedure	143
6.4.4	Inference in Propositional Calculus vs Chain Set Inference	146
6.4.5	Agreement between Inferences	148
6.4.6	Disagreement between Inferences	148
6.4.7	Reasons for Agreements and Disagreements between Inferences	151
6.5	Theorem Proving *	155
6.5.1	Invariance of Answer Value	155
6.5.2	Reductio ad Absurdum	158
6.6	Formal Proof of the Basic Question Answering Formula *	159
6.7	Exercises	162

7 Inferences with Higher Level Chain Sets *	165
7.1 The Basic Meaning of <i>IF THEN</i> and Higher Level Chain Sets *	165
7.1.1 Introduction	165
7.1.2 The Basic Meaning of <i>IF THEN</i> and its Negation	166
7.1.3 Higher Level Chain Sets for <i>IF THEN</i>	167
7.1.4 Answering Negated <i>IF THEN</i> Questions	169
7.2 Composition of <i>IF THEN</i> Questions and the Paris-Rome Example *	171
7.2.1 Introduction	171
7.2.2 The Paris Rome Problem in Propositional Calculus	171
7.2.3 Composition of <i>IF THEN</i> Questions in the BP Chain Set Logic	174
7.2.4 The Paris Rome Problem in the BP Chain Set Logic	177
7.3 Exercises	181
8 IF THEN Information	182
8.1 Introduction	182
8.2 Formal and Notational Differences between Chain Set and Traditional Logic for <i>IF THEN</i> *	187
8.2.1 Overview	187
8.2.2 Notation and Terminology	187
8.2.3 <i>IF THEN</i> Information versus <i>IF THEN</i> Question, Analogy in Meaning versus Formal Analogy	188
8.2.4 An Inference $info \rightarrow qu$ as an <i>IF THEN</i> Question	190
8.3 The <i>IF A THEN C</i> Information Chain Set	190
8.3.1 Noncomposite Antecedent and Consequent	190
8.3.2 General Antecedent and Consequent *	193
8.3.3 The <i>IF THEN</i> Structure in the Case of Internal Inconsistency *	194
8.4 Consistency and Autology for <i>IF THEN</i> *	195
8.4.1 Consistent and Inconsistent <i>IF THEN</i> Sentences	195
8.4.2 Autological <i>IF THEN</i> Sentences *	198
8.4.3 Examples, $(p \rightarrow p)$, $(p \rightarrow \neg p)$ and $[(p \rightarrow p) \rightarrow (p \rightarrow \neg p)]$	199
8.5 Exercises	203
9 Various IF THEN Topics	205
9.1 Introduction	205
9.2 <i>IF THEN</i> Structures and M Logic	205
9.2.1 <i>IF THEN</i> Structures, Dinosaurs and Centaurs	205
9.2.2 Summary of the M Chain Set Logic	206
9.3 $p \rightarrow q$ vs $q \rightarrow p$, $q \equiv p$, $(p \rightarrow \neg q) \equiv (q \rightarrow \neg p)$?	208
9.3.1 $p \rightarrow q$ vs $q \rightarrow p$	208
9.3.2 Equivalence or <i>IFF</i>	208
9.3.3 $(p \rightarrow \neg q) \equiv (q \rightarrow \neg p)$?	210
9.4 Equivalent Statements versus Equivalent Questions	210
9.5 <i>IF THEN</i> Statements versus Questions, Chain Set versus Traditional Treatment	213
9.5.1 The General Probabilistic Interpretation of <i>IF THEN</i> Information	213

9.5.2	Localizing the Difference between BP Chain Set Logic versus Traditional Logic	214
9.5.3	Summary	215
9.6	Modus Ponens Reasoning	215
9.7	Inferences as Information*	216
9.8	Transitivity and Distributivity*	218
9.8.1	Transitivity	218
9.8.2	Distributivity in <i>IF THEN</i>	219
9.9	An Equivalence of Propositional Calculus, $p \rightarrow q$ vs $\neg p \vee q$	220
9.10	Exercises	222

II M Logic 224

10	The M-Notation and Ignorance vs Uncertainty	225
10.1	Introduction	225
10.2	The M Notation	227
10.2.1	Possible Probability Values in the M Notation	227
10.2.2	Interval-Valued Probabilities and Ignorance versus Uncertainty	228
10.2.3	Certainties	228
10.2.4	Consequences of the 'Summing-up-to-1' Requirement, Legal Probability Rows	228
10.2.5	Summary	229
10.3	IF THEN and Classification Structures as Chain Sets	229
10.3.1	Natural Language versus M Notation for Quantification	229
10.3.2	Examples of Ignorance	232
10.3.3	Examples of Inferences in the Presence of Ignorance	234
10.3.4	Non-Classificational <i>IF THEN</i> Sentences	237
10.4	Predicate Calculus vs AI Notation, Semantic Network vs Chain Set System	238
10.4.1	Predicate Calculus vs AI Notation	238
10.4.2	Semantic Network vs Chain Set System	239
10.5	Summary	240
10.6	Exercises	241
11	Two Types of Updating of Probabilities	243
11.1	Introduction	243
11.1.1	Updating of Probabilities	243
11.1.2	Updating of Possibilities	245
11.2	Updating of Probabilities of Type 1	246
11.3	Updating of Probabilities of Type 2	250
11.3.1	The Meaning of Type 2 Updating	250
11.3.2	The Type 2 Updating Rules and BP Multiplication	252
11.4	Type 2 Updating of Possibilities*	254

12 Operations and Ignorance in the M Logic	256
12.1 Overview	256
12.2 Expansion and Ignorance in the M Logic	260
12.2.1 Introduction	260
12.2.2 The Ignorance Expansion	260
12.2.3 The Uncertainty Expansion	262
12.2.4 The Ignorance Expansion and Existence Information	266
12.2.5 The States of Complete Ignorance	267
12.2.6 An Updating Theorem	269
12.3 Equivalent Representations and Operations in M Logic for Chain Sets without Variables *	269
12.3.1 Introduction	269
12.3.2 Multiple-Probability-Row Representation of Chain Sets without Variables	270
12.3.3 M-Operations for Multiple-Probability-Row Chain Sets without Variables	272
12.3.4 Summary	273
12.4 M-Operations for Chain Sets with Variables	274
12.4.1 Introduction	274
12.4.2 Quantification Sentences with Negations	275
12.4.3 Quantification Sentences with an <i>OR</i> Connective	276
12.4.4 Summary	279
13 Modus Ponens and Existence Updating *	281
13.1 Overview	281
13.2 <i>IF THEN</i> Sentences with and without Variables *	283
13.3 Types of Updating of <i>IF THEN</i> Information	284
13.3.1 Why Type 1 for Updating of <i>IF THEN</i> Structures	284
13.3.2 Type 2 Updating for Modus Ponens Inference	285
13.3.3 Which Expansion	288
13.4 Examples of Generalized Modus Ponens	288
13.5 Storage of <i>IF THEN</i> and of Non- <i>IF THEN</i> Information in a Knowledge Base	297
13.6 Exercises	300
14 <i>IF THEN</i> Information in the M Logic	301
14.1 Introduction	301
14.2 Marginal Probabilities, Updating and Storage for <i>IF THEN</i> Chain Set Structures	302
14.2.1 Marginal Probabilities in an Arbitrary Information Chain Set	302
14.2.2 Marginal Probabilities in <i>IF THEN</i> Chain Sets with Variables	303
14.2.3 Marginal Probabilities in <i>IF THEN</i> Chain Sets without Variables	306
14.2.4 Updating of <i>IF THEN</i> by <i>IF THEN</i>	307
14.2.5 Conclusion	308
14.3 The <i>IF THEN</i> Chain Set	309
14.3.1 Introduction	309

14.3.2	Probabilistic Derivation of the <i>IF THEN</i> Chain Set	311
14.3.3	Chain Set Derivation of the <i>IF THEN</i> Chain Set	312
14.4	<i>IF THEN</i> Chain Set with Composite Components *	314
14.5	Three Notes on Notation	315
14.5.1	A Proper <i>IF THEN</i> Statement	315
14.5.2	<i>IF p THEN q</i> with Probability <i>m</i>	315
14.5.3	'is a', 'is in', 'is a part of'	316
14.6	Three Examples	316
14.6.1	Example of a Proper <i>IF THEN</i> Statement	318
14.6.2	$(A \rightarrow C) \wedge (B \rightarrow C)$	318
14.6.3	The Paris Rome Problem in the M Logic, Final Solution	322
14.6.4	Conclusion	324
14.7	Exercises	325
15	Existence Structures	326
15.1	Introduction	326
15.2	Existence in Predicate Calculus versus Chain Set Logic	331
15.3	Instance Information	332
15.4	Marginal Existence Information	334
15.5	Exercises	344
16	Existence Inferences	346
16.1	Overview	346
16.2	Marginal Existence Questions	348
16.2.1	'What is the Value' Questions and Answers	348
16.2.2	Higher Level <i>EXIST</i> Chain Sets, Direct Answers	348
16.3	Interval Valued Marginal <i>EXIST</i> Questions	349
16.4	Interval-Valued Marginal <i>EXIST</i> Information	350
16.5	BP <i>Question</i> Chain Sets are Valid also in M Logic	352
16.6	A Seeming Problem *	353
17	Conditional and Joint Existence Information and Inferences	356
17.1	Introduction	356
17.1.1	Existential Sentences with Relative Clauses	356
17.1.2	A Storage Structure	357
17.1.3	Conditional <i>EXIST</i> versus <i>IF THEN</i> Information	358
17.1.4	Absolute versus Context Dependent Meaning of Adjectives . . .	359
17.1.5	Symmetric or Asymmetric Representation of Existential Sen- tences with Relative Clauses?	360
17.1.6	Explaining the Conditional <i>EXIST</i> Figure 17.1, and the <i>IF THEN</i> Figure 17.2	360
17.2	Updating of the <i>EXIST</i> and <i>IF THEN</i> Structures due to Conditional <i>EXIST</i> Information Supply	365
17.3	Conditional <i>EXIST</i> Inferences	367
17.3.1	Answers to Conditional <i>EXIST</i> Questions	367
17.3.2	The Example of the Intelligent Dolphins	368

17.4 Joint Existence	375
17.4.1 Joint Existence Information	375
17.4.2 Joint Existence Questions and Inferences	377
17.5 Exercises	378
III Attributes and The Alex System versus Chain Sets	380
18 Attributes and the Alex System versus Chain Sets	381
18.1 Introduction to the Alex Computer System	381
18.2 Attributes in the Alex System	384
18.3 Attributes in the Chain Set System	384
18.4 Advantages of an M Chain Set System versus a Semantic Network . .	385
18.5 Available Software	386
19 Solutions to Some Exercises	387
Bibliography	399
Index	407
