

Contents

1. Introduction

1.1	The Transverse Ising Models	1
1.2	A Simple Version of the Model and Mean Field Phase Diagram	2
1.3	Properties of Ising Models in a Transverse Field: A Summary	6
	References	12

2. Transverse Ising Chain (Pure System)

2.1	Symmetries and the Critical Point	17
2.1a	Duality Symmetry of the Transverse Ising Model	17
2.1b	Perturbative Approach	19
2.2	Eigenvalue Spectrum: Fermionic Representation	21
2.3	Diagonalisation Techniques for Finite Transverse Ising Chain	30
2.3a	Finite-Size Scaling	30
2.3b	The Diagonalisation Techniques	31
2.4	Real-Space Renormalisation	35
2.5	Finite Temperature Behaviour of the Transverse Ising Chain	40
	Appendix	41
A2.1	Jordan-Wigner Fermions	41
A2.2	To Diagonalise a General Hamiltonian Quadratic in Fermions	42
A2.3	Calculation of Correlation Functions	46
	References	49

3. Transverse Ising System in Higher Dimensions (Pure Systems)

3.1	Mapping to the Effective Classical Hamiltonian: Suzuki-Trotter Formalism	50
3.2	The Quantum Monte Carlo Method	52
3.3	Discretised Path Integral Techniques for a Transverse Ising System	55

3.4	Scaling Properties Close to the Critical Point	57
3.5	Real-Space and Field-Theoretic Renormalisation Group	60
3.5a	Real-Space Renormalisation Group	60
3.5b	Field-Theoretic Renormalisation Group	61
	Appendix	63
A3.1	Effective Classical Hamiltonian of the Transverse Ising Model	63
A3.2	Derivation of the Equivalent Quantum Hamiltonian of a Classical Spin System	65
	References	67

4. ANNNI Model in a Transverse Field

4.1	Introduction	68
4.2	Classical ANNNI Model	69
4.3	ANNNI Chain in a Transverse Field	71
4.3a	Some Results in the Hamiltonian Limit: The Peschel-Emery Line	72
4.3b	Interacting Fermion Picture	75
4.3c	Real-Space Renormalisation Group Calculations	77
4.3d	Field-Theoretic Renormalisation Group	80
4.3e	Numerical Methods	81
4.3f	Monte Carlo Study	84
4.4	Large S Analysis	85
4.5	Results in Higher Dimensions	87
4.6	Nearest Neighbour Correlations in the Ground State	92
	Appendix	93
A4.1	Hartree-Fock Method: Mathematical Details	93
A4.2	Large S Analysis: Diagonalisation of the Hamiltonian in Spin-Wave Analysis	95
	References	96

5. Dilute and Random Transverse Ising Systems

5.1	Introduction	99
5.2	Dilute Ising System in a Transverse Field	99
5.2a	Mapping to the Effective Classical Hamiltonian: Harris Criterion	101
5.2b	Discontinuous Jump in $\Gamma_c(p, T = 0)$ at the Percolation Threshold	103
5.2c	Real-Space Renormalisation Group Studies and Scaling	104
5.3	Critical Behaviour of a Random Transverse Field Ising Model	109
5.3a	Analytical Results	110
5.3b	Mapping to Free Fermions	112
	References	116

6. Transverse Ising Spin Glass and Random Field Systems

6.1	Classical Ising Spin Glasses: A Summary	118
6.2	Quantum Spin Glasses	120
6.3	Mattis Model in a Transverse Field	123
6.4	Sherrington-Kirkpatrick Model in a Transverse Field	125
6.5	Edwards-Anderson Model in a Transverse Field	136
6.6	A General Discussion on Transverse Ising Spin Glasses	141
6.7	Classical Random Field Ising Models (RFIM)	144
6.8	Random Field Transverse Ising Models	146
6.8a	Mean Field Studies	146
6.8b	Mapping of Random Ising Antiferromagnet in Uniform Longitudinal and Transverse Fields to RFTIM	150
6.8c	Concluding Remarks on the Random Field Transverse Ising Model	152
	Appendix	153
A6.1	The Vector Spin Glass Model	153
A6.2	The Effective Classical Hamiltonian of a Transverse Ising Spin Glass	154
A6.3	Effective Single-Site Hamiltonian for Long-Range Interacting RFTIM	155
A6.4	Mapping of Random Ising Antiferromagnet in Uniform Longitudinal and Transverse Fields to RFTIM	157
	References	159

7. Dynamics of Quantum Ising Systems

7.1	Tunnelling Dynamics for Hamiltonians Without Explicit Time Dependence	162
7.1a	Dynamics in Ising Systems: Random Phase Approximation	162
7.1b	Dynamics in Dilute Ising Spin Systems	164
7.1c	Dynamics in Quantum Ising Glasses	166
7.2	Tunnelling Dynamics in Presence of Time-Dependent Perturbations	169
7.2a	Oscillating Fields: Quantum Hysteresis	169
7.2b	Response Due to a Pulsed Transverse Field in Absence of a Longitudinal Field	180
	Appendix	182
A7.1a	Some Analytic Solutions in the Linearised Limit	182
A7.1b	Approximate Analytic Form of Dynamic Phase Boundary	183
A7.2	Microscopic Equation of Motion for Oscillatory Transverse Field	184
	References	187

8. Related Models

8.1	XY Model in a Transverse Field	188
8.1a	Mean Field Theory and BCS Equations	188
8.1b	Exact Solution of Transverse XY Chain	191
8.1c	Transverse XY Chain and Harper Model	193
8.1d	Infinite Range XY Spin Glass in a Transverse Field	195
8.2	Ising Spin Glass with p -Spin Interactions in a Transverse Field	197
8.3	Hopfield Model in a Transverse Field	199
	References	202
