

# Contents

Foreword .....	xi
Abbreviations .....	xiii
<b>1 The past and future of perinatal medicine .....</b>	<b>1</b>
<i>Joachim W. Dudenhausen</i>	
<b>2 Perinatal brain programming and functional teratology .....</b>	<b>5</b>
<i>Günter Dörner</i>	
<b>3 Experimental models of low birth weight – insight into the developmental programming of metabolic health, aging and immune function .....</b>	<b>11</b>
<i>Chantal A. A. Heppelotte, Donald Palmer, and Susan E. Ozanne</i>	
3.1 Developmental programming and the metabolic syndrome in humans .....	11
3.2 The thrifty phenotype hypothesis.....	11
3.3 Evidence for developmental programming of the metabolic syndrome from animal models.....	15
3.4 Developmental programming of aging.....	18
3.5 Developmental programming and immunity.....	19
3.6 Conclusions.....	20
<b>4 Cardiovascular consequences of IUGR: Experimental aspects.....</b>	<b>27</b>
<i>Simon C. Langley-Evans</i>	
4.1 Intrauterine growth retardation and maternal undernutrition.....	27
4.2 Long-term cardiovascular consequences of undernutrition: Animal models of programming.....	29
4.3 The mechanistic basis of cardiovascular programming .....	32
4.4 Research priorities .....	37
<b>5 Fetal programming of endocrine function in IUGR offspring depends on the cause of low birth weight: Evidence from animal models and the human FIPS-study .....</b>	<b>41</b>
<i>Eva Nüsken, Anja Tzschoppe, Jörg Dötsch, and Kai-Dietrich Nüsken</i>	
5.1 Introduction .....	41
5.2 Leptin and IGF-1, two key candidate molecules of endocrine programming .....	42
5.3 Animal models of IUGR.....	42
5.4 Human IUGR study (FIPS).....	44
5.5 Summary .....	47

<b>6 Intrauterine corticosteroids for lung maturation: Observations of HPA axis function and cardiac autonomic balance in the neonate .....</b>	51
<i>Leonhard Schäffer, Tilo Burkhardt, Maren Tomaske, Manfred Rauh, and Ernst Beinder</i>	
6.1 Introduction.....	51
6.2 Vulnerability of the hypothalamic-pituitary-adrenal (HPA) axis.....	52
6.3 Vulnerability of the sympathetic nervous system .....	52
6.4 Findings in humans.....	53
6.5 HPA axis functionality in neonates after intrauterine betamethasone treatment.....	53
6.6 The cardiac autonomic system after intrauterine betamethasone treatment.....	54
6.7 Summary .....	55
<b>7 Feast or Famine: In the fast lane to puberty.....</b>	59
<i>Deborah M. Sloboda, Angelica B. Bernal, Graham J. Howie, Mark B. Hampton, and Mark H. Vickers</i>	
7.1 Introduction.....	59
7.2 Animal studies .....	61
7.3 Conclusions.....	65
<b>8 Early life origins of diabetes and obesity: General aspects and the thin – fat baby paradigm .....</b>	69
<i>Chittaranjan S. Yajnik and Urmila S. Deshmukh</i>	
8.1 Introduction.....	69
8.2 Nutrition and Diabetes .....	70
8.3 Maternal nutrition, fetal growth, and future health .....	70
8.4 Developmental plasticity, programming, teratogenesis, and predictive adaptive response .....	72
8.5 Birth weight: An exposure, an intermediate variable, or only a marker?.....	73
8.6 Role of postnatal growth.....	74
8.7 Contributions of the Pune Maternal Nutrition Study .....	75
8.8 Genetics and epigenetics of fetal growth and diabetes-obesity .....	77
8.9 Conclusion .....	79
<b>9 The outcome in offspring of obese mothers: Clinical and experimental aspects.....</b>	83
<i>Lucilla Poston</i>	
9.1 Introduction .....	83
9.2 Associations between obesity in mother and child .....	84

9.3	Experimental models of maternal obesity .....	86
9.4	Summary .....	91
<b>10</b>	<b>Short and long term effects of gestational obesity:</b>	
	<b>Clinical observations .....</b>	97
	<i>Patrick M. Catalano</i>	
10.1	Maternal metabolism in normal pregnancy .....	97
10.2	Fetal growth and body composition .....	98
10.3	The child of the obese woman .....	101
10.4	Maternal factors facilitating fetal fat accretion .....	102
10.5	Summary .....	105
<b>11</b>	<b>Emerging role of neuroendocrine programming in obesity .....</b>	107
	<i>Sophie M. Steculorum and Sébastien G. Bouret</i>	
11.1	Introduction .....	107
11.2	Development of hypothalamic neuroendocrine pathways controlling appetite .....	109
11.3	Animal models of metabolic programming .....	110
11.4	Assessment of neuroendocrine regulation in metabolically malprogrammed animals .....	114
11.5	Structural influences of perinatal nutrition on hypothalamic appetite-related networks .....	119
11.6	Developmental signals influencing the ultimate architecture of neuroendocrine feeding pathways .....	121
11.7	Perspectives and conclusions .....	122
<b>12</b>	<b>Genetic influences on the long-term effects of the perinatal environment on energy homeostasis and offspring obesity .....</b>	129
	<i>Barry E. Levin</i>	
12.1	Introduction .....	129
12.2	Neural control of energy homeostasis .....	130
12.3	Development of neural systems controlling energy homeostasis .....	131
12.4	Gene x environment interactions in the development of obesity .....	131
12.5	Summary and conclusions .....	134
<b>13</b>	<b>Perinatal programming in offspring of diabetic mothers:</b>	
	<b>Clinical data .....</b>	141
	<i>Peter Damm, Louise Kelstrup, Elisabeth R. Mathiesen, and Tine Dalsgaard Clausen</i>	
13.1	Introduction .....	141
13.2	Short-term implications for the offspring .....	142
13.3	Long-term implications for the offspring .....	142
13.4	Own studies .....	145
13.5	Concluding remarks .....	147

<b>14 Experimental observations on perinatal programming in offspring of diabetic mothers .....</b>	153
<i>Thomas Harder, Leona Aerts, Andreas Plagemann, and F. André Van Assche</i>	
14.1 Introduction .....	153
14.2 Epidemiological and clinical studies.....	154
14.3 Animal studies.....	156
14.4 Conclusions and outlook.....	165
<b>15 Prenatal infections and long-term mental outcome: Modeling schizophrenia-related dysfunctions using the prenatal PolyI:C model in mice .....</b>	171
<i>Joram Feldon and Urs Meyer</i>	
15.1 Introduction .....	171
15.2 Schizophrenia and animal models.....	174
15.3 Features and methodology of the mouse prenatal PolyI:C model .....	179
15.4 Schizophrenia-related phenotypes in the mouse prenatal PolyI:C model .....	181
15.5 Concluding remarks .....	190
<b>16 Prenatal programming of cognition and emotion in humans: From birth to age 20.....</b>	199
<i>Bea R. H. Van den Bergh</i>	
16.1 Prenatal maternal anxiety and stress are associated with less favorable developmental outcomes.....	199
16.2 PMAS is associated with altered fetal, infant, and child neurobehavioral development.....	201
16.3 PMAS is associated with adolescent emotion and HPA activity: HPA mediates the link between PMAS and adolescent depressed mood .....	202
16.4 PMAS is associated with adolescent cognition: Neuropsychological, ERP, and fMRI measures reveal evidence for impaired endogenous cognitive control .....	203
16.5 Conclusion.....	204
<b>17 Perinatal programming of allergy .....</b>	207
<i>Renate L. Bergmann and Karl E. Bergmann</i>	
17.1 Allergy and atopy .....	207
17.2 Early development of the immune system.....	208
17.3 Physiology and pathophysiology of early immune reactions .....	209
17.4 Regulatory T cells .....	210
17.5 The role of mucosal surfaces.....	210
17.6 The role of early tolerance induction .....	211
17.7 Murine models.....	211

17.8	Human milk .....	212
17.9	Empirical results .....	212
17.10	DNA methylation and demethylation .....	214
<b>18</b>	<b>Perinatal origin of testicular germ cell cancer: Possible involvement of developmental reprogramming.....</b>	<b>219</b>
	<i>Kristian Almstrup, Ewa Rajpert-De Meyts, and Niels E. Skakkebæk</i>	
18.1	Introduction .....	219
18.2	Carcinoma <i>in situ</i> testis .....	221
18.3	Testicular dysgenesis.....	221
18.4	Perinatal reprogramming of germ cells .....	222
18.5	Involvement of perinatal reprogramming in the CIS phenotype?.....	224
18.6	Concluding remarks .....	225
<b>19</b>	<b>Epigenetic adaptation during early life.....</b>	<b>229</b>
	<i>Moshe Szyf</i>	
19.1	DNA methylation patterns and cellular identity .....	229
19.2	Early life environment and DNA methylation .....	231
19.3	Reversibility of DNA methylation; adaptive responsiveness of the methylome .....	231
19.4	Adaptation of the methylome early in life.....	234
19.5	Epigenetic programming by maternal care in the rat.....	235
19.6	Signaling cascades leading from maternal care to epigenetic programming .....	236
19.7	Reversibility of early life DNA methylation programming by maternal care .....	236
19.8	Epigenetic programming by early life events in humans.....	237
19.9	Genome-wide and system-wide effects of early life adversity .....	238
19.10	Prospects.....	239
<b>20</b>	<b>Toward a unifying concept on perinatal programming: Vegetative imprinting by environment-dependent biocybernetogenesis .....</b>	<b>243</b>
	<i>Andreas Plagemann</i>	
20.1	Historical and semantic notes.....	244
20.2	A main current focus: The “small baby syndrome” and the “match–mismatch” hypotheses .....	246
20.3	An alternative, integrative, and mechanistic hypothesis on perinatal programming .....	248
20.4	A mechanistic clue: Developmental programming of neuro-endocrine and vegetative regulatory systems .....	250
20.5	Epigenomic plasticity as a key mechanism in perinatal programming.....	253

20.6	For example: Fetal and neonatal overnutrition – a paradigm with practical relevance .....	255
20.7	Intergenerational transmission and prevention of perinatally acquired characteristics.....	264
20.8	Synopsis.....	273
	Author index .....	283
	Index.....	287
