1 Introduction

Giuseppe Morandi, Pasquale Sodano, Arturo Tagliacozzo, and Valerio Tognetti	1
References	5

2 Fermi Liquids and Luttinger Liquids

Heinz J. Schulz, Gianaurelio Cuniberti, and Pierbiagio Pieri	9
2.1 Introduction	9
2.2 Fermi Liquids	9
2.2.1 The Fermi Gas	10
2.2.2 Landau's Theory of Fermi Liquids	12
2.2.3 Microscopic Basis of Landau's Theory	17
2.2.4 Summary	21
2.3 Renormalization Group for Interacting Fermions	22
2.3.1 One Dimension	23
2.3.2 Two and Three Dimensions	28
2.4 Bosonization and the Luttinger Liquid	32
2.4.1 Spinless Model: Representation of Excitations	32
2.4.2 Model with Spin: the Concept of the Luttinger Liquid	39
2.4.3 Summary	47
2.5 Applications	47
2.5.1 Transport	48
2.5.2 Disorder	53
2.5.3 The Spin-1/2 Chain as a Luttinger Liquid	59
2.6 Spin Ladders and Coupled Luttinger Liquids	69
2.6.1 Coupled Spin Chains	69
2.6.2 Two Coupled Luttinger Liquids	71
2.6.3 Summary	74
Appendix: When to Bosonize in Peace	75
References	77

3 Quantum Number Fractionalization in Antiferromagnets

Robert B. Laughlin, Domenico Giuliano, Raffaele Caracciolo, and Olivia L. White	83
3.1 Introduction	83
3.2 Haldane–Shastry Hamiltonian	84
3.3 Ground State	85
3.4 Spinons	90
3.5 Annihilation Operators	98
3.6 Spin Current	102
3.7 Supersymmetry	104
3.8 Holons	106
Appendix A: Fourier Sums	111
Appendix B: Problems	112
References	115

**4 Conformal Field Theory Approach
to Quantum Impurity Problems**

Ian Affleck	117
4.1 Old Results on the Kondo Problem	117
4.1.1 Reduction to 1D	118
4.1.2 Perturbative RG	119
4.1.3 Local Fermi Liquid Theory	120
4.2 Some Basic Conformal Field Theory/Luttinger Liquid Techniques ..	124
4.3 CFT Approach to the Kondo Problem	132
4.3.1 Current Algebra Formulation and the Infrared Fixed Point ..	132
4.3.2 BCFT and the Multi-Channel Kondo Problem	136
References	141

**5 Quantum Magnetism Approaches
to Strongly Correlated Electrons**

Assa Auerbach, Federico Berruto, and Luca Capriotti	143
5.1 Deriving the Effective Hamiltonian	143
5.1.1 Two-Site Hubbard Model	144
5.1.2 Renormalization to Low Energy Subspace	145
5.1.3 From Hubbard to $t - J$ and Heisenberg Models	147
5.1.4 The Negative- U Hubbard Model	149
5.2 Quantum Magnetism	150
5.2.1 Spin Coherent States	150
5.2.2 Spin Path Integral	151
5.2.3 Spin Wave Theory	153
5.2.4 Continuum Theory for Anisotropic Models	155
5.2.5 Anisotropic Quantum Rotators	157
5.2.6 Haldane’s Mapping	159
5.2.7 Spin Liquid States	160

5.3 Pseudospins and Superconductivity	161
5.3.1 Charge Density Wave to Superconductivity	162
5.3.2 Order of Transition from Rotator Theory	163
5.3.3 SO(5) Rotator Theory and High- T_c Superconductors	165
5.3.4 Vortex Dynamics in Superfluids	167
References	170

6 Introduction to Some Common Topics in Gauge Theory and Spin Systems

Gianluca Grignani and Gordon W. Semenoff	171
6.1 Overview	171
6.2 What Is a Gauge Theory?	173
6.2.1 Electrodynamics	174
6.2.2 Geometry	180
6.2.3 Schrödinger Equation for a Charged Particle	183
6.2.4 Bohm–Aharonov Phase	185
6.2.5 Classical Yang–Mills Theory	186
6.3 Relativistic Fermions	191
6.3.1 1+1 Dimensions	195
6.3.2 2+1 Dimensions	198
6.3.3 3+1 Dimensions	200
6.4 Quantized Yang–Mills Theory	202
6.4.1 Canonical Quantization of Electrodynamics	207
6.4.2 Path Integrals	209
6.5 Quantum Spins and Strong Coupling in Gauge Theory	211
6.5.1 Overview of the Problem	211
6.6 Staggered Fermions	216
6.7 Strong Coupling Lattice Gauge Theory	220
6.7.1 Hamiltonian Formulation of Lattice Gauge Theory	220
6.7.2 Strong Coupling	222
6.8 Results on Strong Coupling	228
References	231

7 Quantum Chaos and Transport in Mesoscopic Systems

Boris L. Altshuler, Cristiano Biagini, and Marco Patriarca	235
7.1 The Dimensionless Conductance g	235
7.2 Quantum Chaos	236
7.2.1 Beyond Random Matrix Theory	241
7.2.2 From Disordered to Chaotic Systems	244
7.3 Quantum Dots	249
7.3.1 Spectroscopy	249
7.3.2 Orthodox Theory	251
7.3.3 0d Hamiltonian	254
7.4 Quasiparticle Lifetime in a Finite System	257

7.4.1 Transition Region	261
References	267
