

Contents

Introduction	1
1. Finite Fields	2
2. Factorization of Polynomials.	5
3. Galois Groups	11
4. Continued Fractions	14
5. Field Extensions.	18
(a) Primitive Elements.	18
(b) Tschirnhausen Transformations	19
(c) A Real Root Calculus.	22
6. Modules and Orders.	24
(a) Sum and Intersection of Modules	24
(b) Embedding of an Order into a Maximal Order.	25
(c) The Fractional Ideals of an Order	27
7. Products of Linear Forms.	29
8. Units in Algebraic Number Fields.	35
9. Class Numbers of Algebraic Number Fields.	40
10. Class Groups and Class Fields of Algebraic Number Fields. . .	51
11. Diophantine Equations	56
12. The Hasse Principle for Cubic Surfaces.	70
