

C o n t e n t s

RUTENFRANZ, J. and COLQUHOUN, W.P.	
Introduction	9
I. <u>Effects of sleep deprivation, and of sleep disturbance caused by phase shifted daily routine</u>	
MILLS, J.N. and FORT, A.	
Relative effects of sleep disturbance and persistent endogenous rhythm after experimental phase shift	11
COLQUHOUN, W.P., HAMILTON, P. and EDWARDS, R.S.	
Effects of circadian rhythm, sleep deprivation, and fatigue on watchkeeping performance during the night hours	20
WEDDERBURN, A.A.I.	
EEG and self-recorded sleep of two shiftworkers over four weeks of real and synthetic work	29
EHRENSTEIN, W. and MÜLLER-LIMMROTH, W.	
Changes in sleep patterns caused by shift work and traffic noise	48
KNAUTH, P. and RUTENFRANZ, J.	
The effects of noise on the sleep of nightworkers	57
II. <u>Adaptation of physiological and performance functions to phase shifted work under laboratory conditions</u>	
KNAUTH, P. and ILMARINEN, J.	
Continuous measurement of body temperature during a three-week experiment with inverted working and sleeping hours	66
RUTENFRANZ, J., KLIMMER, F. and KNAUTH, P.	
Desynchronization of different physiological functions during three weeks of experimental nightshift with limited and unlimited sleep	74

ÅKERSTEDT, T. and FRÖBERG, J.	
Work hours and 24 h temporal patterns in sympathetic-adrenal medullary activity and self-rated activation	78
PÖLLMANN, L.	
Continuous measurements of heart and respiratory rate during a long-term experiment with an inverted activity cycle	94
KOGI, K., TAKAHASHI, M. and ONISHI, N.	
Experimental evaluation of frequent eight-hour versus less frequent longer night shifts	103
FOLKARD, S.	
The nature of diurnal variations in performance and their implications for shift work studies	113
GUILLERM, R., RADZISZEWSKI, E. and REINBERG, A.	
Circadian rhythms of six healthy young men over a 4-week period with night-work every 48 h and a 2 % CO ₂ atmosphere	123
III. <u>Adaptation of physiological and performance functions to phase shifted work under field conditions</u>	
PATKAI, P., PETTERSSON, K. and ÅKERSTEDT, T.	
The diurnal pattern of some physiological and psychological functions in permanent night workers and in men working on a two-shift (day and night) system	131
REINBERG, A., CHAUMONT, A.-J. and LAPORTE, A.	
Circadian temporal structure of 20 shift-workers (8-hour shift-weekly rotation): An autometric field study	142
LOBBAN, M.C.	
Physiological circadian rhythms in shift-workers in the high arctic (abstract)	166
VOKAC, Z. and RODAHL, K.	
A field study of rotating and continuous night shifts in a steel mill	168

HILDEBRANDT, G., ROHMERT, W. and RUTENFRANZ, J.

The influence of fatigue and rest period on the
circadian variation of error frequency in
shift workers (engine drivers) 174

MEERS, A.

Performance on different turns of duty within a
three-shift system and its relation to body
temperature - two field studies 188

TSANEVA, N. and DALEVA, M.

Field study of the diurnal changes of the
adrenal system 206

IV. Attitudes towards different types of shiftwork,
and individual differences

THIERRY, H., HOOLWERF, G. and DRENT, P.J.D.

Attitudes of permanent day and shift workers
towards shiftwork - a field study 213

NACHREINER, F.

Role perceptions, job satisfaction and attitudes
towards shiftwork of workers in different shift
systems as related to situational and personal
factors 232

KNOERCHEN, R., GUNDLACH, E.M. and HILDEBRANDT, G.

Circadian variations of visual sensitivity and
vegetative responsiveness to light in man 244

ÖSTBERG, O. and SVENSSON, G.

"Functional age" and physical work capacity
during day and night 254

ILMARINEN, J., KLIMT, F. and RUTENFRANZ, J.

Circadian variations of maximal aerobic power 265

ADUM, O.

Shiftwork of the professional drivers 273

Statement of the Symposium 277

List of participants 278
