Preface *XIII*

1 Introduction 1

- 1.1 Galaxies 1
- 1.2 A Multifrequency Approach 4
- 1.3 The Purpose of this Book 10

Part One Emitting Sources and Radiative Processes in Galaxies 15

2 X-ray 17

- 2.1 Continuum 17
- 2.1.1 Discrete Sources 18
- 2.1.2 X-ray Emission in Active Galaxies 20
- 2.1.3 Hot Gas 21

3 UV-Optical-NIR 25

- 3.1 Continuum: Stellar Emission 26
- 3.2 Emission Lines 28
- 3.2.1 Hydrogen Lines 32
- 3.2.2 Metals 34
- 3.3 Absorption Lines 35
- 3.3.1 Hydrogen Lines 37
- 3.3.2 Other Elements 38
- 3.4 Molecular Lines 39
- 3.4.1 H₂ Near-Infrared Emission Lines 39
- 3.4.2 H₂ UV Absorption Lines 39

4 The Infrared 41

- 4.1 Continuum: Dust Emission 42
- 4.2 Emission Lines 44
- 4.2.1 PAHs 44
- 4.2.2 Cooling Lines in PDR 45
- 4.2.3 H₂ Lines 47
- 4.2.4 Dust Absorption of Ly α Scattered Photons 49

5	Millimeter and Centimeter Radio	51
5.1	Continuum	51
5.1.1	Free–Free Emission	52
5.1.2	Synchrotron Emission	53
5.1.3	Dust Emission	53
5.2	Emission Lines	54
5.2.1	Molecular Lines	54
5.2.2	HI	55
5.3	Absorption Lines	57
5.3.1	HI	57
Part Two	Derived Quantities	59
6	Properties of the Hot X-ray Emitting Gas	61
6.1	X-ray Luminosity	61
6.2	Gas Temperature	61
7	Dust Properties	63
7.1	The Far-IR Luminosity	63
7.2	Dust Mass and Temperature	65
8	Radio Properties	71
8.1	Determining the Contribution of the Different Radio Components	71
8.1.1	Synchrotron vs. Free–Free Radio Emission in the Centimeter Domain	71
8.1.2	The Emission of the Cold Dust Component at $\lambda \leq 1.5$ mm	72
8.2	The Radio Luminosity	74
9	The Spectral Energy Distribution	77
9.1	The Emission in the UV to Near-Infrared Spectral Domain	79
9.1.1	UV, Optical, and Near-IR Colors	81
9.1.2	Fitting SEDs with Population Synthesis Models	83
9.2	The Dust Emission in the Infrared Domain	84
9.2.1	Mid- and Far-Infrared Colors	86
9.3	The Thermal and Nonthermal Radio Emission	90
10	Spectral Features	91
10.1	Galaxy Characterization through Emission and Absorption Lines	91
10.1.1	Classification of the Nuclear Activity	92
10.1.2	Classification of Post-Starburst and Post-Star-Forming Galaxies	92
10.1.3	Line Diagnostics	95
10.2	Gas Metallicity from Emission Lines	101
10.3	Stellar Age and Metallicity from Absorption Lines	103
11	Gas Properties	107
11.1	Gas Density, Mass, and Temperature	107
11.1.1	The Atomic HI Mass	108
11.1.2	The Molecular H ₂ Mass	115

12	Dust Extinction	125
12.1	Galactic Extinction	126
12.1.1	Extinction Curve	127
12.2	Internal Attenuation	132
12.2.1	Attenuation of the Emission Lines	133
12.2.2	Attenuation of the Stellar Continuum	134
13	Star Formation Tracers	143
13.1	The Initial Mass Function	143
13.2	The Star Formation Rate	144
13.3	The Birthrate Parameter and the Specific Star Formation Rate	146
13.4	The Star Formation Efficiency and the Gas Consumption Time Scale	147
13.5	Hydrogen Emission Lines	147
13.6	UV Stellar Continuum	151
13.7	Infrared	152
13.7.1	Integrated Infrared Luminosity	152
13.7.2	Monochromatic Infrared Luminosities	153
13.8	Radio Continuum	153
13.9	Other Indicators	155
13.9.1	The X-ray Luminosity	155
13.9.2	Forbidden Lines	156
13.9.3	[CII]	157
13.9.4	Radio Recombination Lines	157
13.10	Population Synthesis Models	158
13.10.1	Dating a Star Formation Event	158
14	Light Profiles and Structural Parameters	161
14.1	The Surface Brightness Profile	161
14.1.1	Extended Radial Profiles	161
14.1.2	The Central Surface Brightness Profile of Early-Type Galaxies	162
14.1.3	The Vertical Light Profile of Late-Type Galaxies	166
14.2	Structural Parameters	166
14.2.1	Total Magnitudes, Effective Radii and Surface Brightnesses	166
14.2.2	Bulge to Disk Ratio	167
14.3	Morphological Parameters	168
14.3.1	Concentration Index	168
14.3.2	Asymmetry	168
14.3.3	Clumpiness	169
14.3.4	The Gini Coefficient G and the Second-Order Moment of the Brightest 20% of the Galaxy's Flux M_{20}	169
15	Stellar and Dynamical Masses	171
15.1	Stellar Mass Determination Using Population Synthesis Models	171
15.2	Dynamical Mass	175
15.2.1	Rotation Curves and the Dark Matter Distribution	177

- 15.2.2 The Total Mass of Elliptical Galaxies
from Kinematical Measurements 184
- 15.2.3 The Total Mass of Elliptical Galaxies from X-ray Measurements 185
- 15.2.4 The Mass of the Supermassive Black Hole 187

Part Three Constraining Galaxy Evolution 193

16 Statistical Tools 195

- 16.1 Galaxy Number Counts 195
 - 16.1.1 Observed Number Counts 197
- 16.2 Luminosity Function 200
 - 16.2.1 Parametrization of the Luminosity Function 203
 - 16.2.2 Luminosity Distributions and Bivariate Luminosity Functions 204
 - 16.2.3 The Observed Luminosity Functions 205
- 16.3 Luminosity Density 209
 - 16.3.1 The Cosmic Star Formation History
and Build Up of the Stellar Mass 211

17 Scaling Relations 215

- 17.1 Spectrophotometric Relations 216
 - 17.1.1 The Color–Magnitude and Color–Color Relations 216
 - 17.1.2 The Mass–Metallicity Relation 218
 - 17.1.3 The Mass–Gas Relation 220
 - 17.1.4 The Mass–Star Formation Rate Relation 222
- 17.2 Structural Relations 223
 - 17.2.1 The Surface Brightness–Absolute Magnitude Relation 223
 - 17.2.2 The Kormendy Relation 224
- 17.3 Kinematical Relations 224
 - 17.3.1 The Tully–Fisher Relation 225
 - 17.3.2 The Faber–Jackson Relation and the Fundamental Plane 228
 - 17.3.3 The k -Space 230
- 17.4 Supermassive Black Hole Scaling Relations 231

18 Matter Cycle in Galaxies 235

- 18.1 The Star Formation Process 236
 - 18.1.1 The Schmidt Law 236
- 18.2 Feedback 239
 - 18.2.1 The Feedback of AGNs 239
 - 18.2.2 The Feedback of Massive Stars 242

19 The Role of the Environment on Galaxy Evolution 245

- 19.1 Tracers of Different Environments 245
 - 19.1.1 Detection of High-Density Regions 246
 - 19.1.2 Other Quantitative Tracers of High-Density Environments 249
- 19.2 Measuring the Induced Perturbations 250
 - 19.2.1 Other Tracers of Induced Perturbations 253

Appendix A Photometric Redshifts and K-Corrections 255

A.1 The Photometric Redshifts 255

A.1.1 UV-Optical-Near-Infrared Photo- z 255A.1.2 Far Infrared-Radio Continuum Photo- z 258A.2 The K -Correction 258**Appendix B Broad Band Photometry 263**

B.1 Photometric Systems 263

Appendix C Physical and Astronomical Constants and Unit Conversions 267
