

Contents

Chapter 1	<u>The Nature of Entropy-Driven Processes</u>	1
	Spontaneous Processes	1
	The Nature of Entropy	5
	Theory of Entropy-Driven Processes	7
	Entropic Unions	10
	Other Modes of Water Binding	14
	Complex Surface Elements	16
	Conformational Change	16
	Summary	19
Chapter 2	<u>The Role of Water</u>	21
	Introduction	21
	Thermodynamic Definition of Hydration	21
	The Measurement of Changes in Hydration	25
	Volume Change in TMVP Polymerization	29
	Water Release upon Polymerization of TMVP	36
	Summary	44
Chapter 3	<u>Tobacco Mosaic Virus and Its Protein: Disc-Forming Polymerization</u>	46
	Introduction	46
	Dissociation of Trimer	49
	General Preview of the Polymerization of TMV Protein	51

Disc-Forming Polymerization of TMV Protein	53
Linear Condensation Polymerization Mathematics	55
Osmotic Pressure Studies	56
Calorimetric Studies	63
Effect of pH and Ionic Strength	66
Volume Changes	68
Structure of Double Discs	68
Summary	70

Chapter 4 Polymerization-Depolymerization of Tobacco Mosaic Virus Protein:
Rod-Forming Polymerization 72

Introduction	72
Light Scatter	72
Condensation Polymerization Mathematics	75
Cooperativity	83
Effect of pH	85
The Effect of Ionic Strength	95
The Effect of Various Chemicals	97
Calorimetric Studies	100
Summary	104

Chapter 5 Polymerization-Depolymerization of the Proteins from Mutants of
TMV and Other Viruses 106

Introduction	106
Cucumber Virus 4	106
The Dahlemense Strain	113
The PM2 Mutant	120
Cucumber Green Mottle Mosaic Virus Protein	125
Tobacco Rattle Virus	126
Speculation on Models for Polymerization of Coat Protein of TMV and Its Strains	128

Relation of Polymerization Behavior to Chemical Structure . . .	140
Summary	143
 Chapter 6 <u>Reconstitution of TMV</u>	145
Introduction	145
Mixed Reconstitution	146
Synthesis of TMV in the Plant	146
Calorimetric Studies	148
Models for Reconstitution	154
Reconstitution of Other Viruses	161
Summary	162
 Chapter 7 <u>Sickle Cell Anemia Hemoglobin</u>	164
Introduction	164
Polymerization of Sickle Cell Hemoglobin	165
Optical Rotatory Dispersion	172
The Mechanism of Sickling	174
Summary	176
 Chapter 8 <u>Structural and Contractile Proteins</u>	177
Collagen	177
Myosin	180
Actin	185
Interaction of Actin and Myosin	191
Flagellin	193
Summary	197

Chapter 9	<u>Other Entropy-Driven Reactions Involving Macromolecules</u>	199
	Gels	199
	Soaps and Synthetic Detergents.	203
	Antibodies	204
	Proteins and Synthetic Polypeptides	205
	Ion Binding by Proteins	207
	Precipitation of Proteins	208
	Thermal Denaturation of Proteins	208
	Interaction of DNA with Polyvalent Cations	213
	Summary	213
Chapter 10	<u>Entropy-Driven Processes in Biology</u>	215
	Introduction	215
	Fertilized Eggs	217
	Formation of Pseudopodia in Amoebae	218
	Effects of ATP on Cleavage Capacity	221
	Color Changes in the Killifish	222
	Karyokinesis	223
	Effect of Heavy Water on the Mitotic Apparatus	228
	Effects of Colchicine	228
	The Axopodia of Heliozoa	229
	Relationship of Endothermic Cellular Processes to Microtubules	231
	Summary and Conclusions	237
