

Contents

Abbreviations	X
Nomenclature	XVIII
1 Introduction	1
1.1 Background and Motivation	1
1.2 Fundamentals of Two-Winding Transformers	2
1.2.1 Equivalent Diagrams of Transformers	5
1.3 State of the Art	7
1.4 Challenges	10
1.5 Outline of the Thesis	11
2 Thermal Behavior Model, Insulation and Cooling Concepts	13
2.1 Thermal Behavior Model	13
2.1.1 Heat Transfer Mechanism	13
2.1.1.1 Conduction	13
2.1.1.2 Convection	14
2.1.1.3 Radiation	14
2.1.2 Thermal Network Model	14
2.1.2.1 Thermal Resistance	14
2.1.2.2 Heat Transfer Coefficient	15
2.1.2.3 Steady State Heat Transfer Network	17
2.1.2.4 Transient Heat Transfer Network	17
2.2 Insulation	17
2.3 Cooling Concepts	19
2.4 Conclusion	20
3 Windings	21
3.1 Winding Losses	22
3.1.1 Analytical Models for Winding Losses	25
3.1.1.1 Dowell's Model for Foil Transformers	25
3.1.1.2 David's Model for Toroidal Inductors	29
3.1.1.3 Modified David's Model for Transformers	33
3.1.1.4 Modified David's Model for Foil Winding Toroidal Trans- formers	36

3.2	Leakage Inductance	38
3.2.1	Calculation of Leakage Inductance for Foil Winding Transformers with Dowell's Model	38
3.2.2	Calculation of Leakage Inductance for Toroidal Core Transformers	41
3.3	Magnetizing Inductance	43
3.4	Parasitic Capacitance	46
3.4.1	Flat Model Approach	47
3.4.2	Calculation of Stray Capacitance for Toroidal Core Transformers	49
3.5	Conclusion	51
4	Magnetic Cores and Core Losses	53
4.1	Magnetic Cores	53
4.1.1	Core Materials	54
4.1.1.1	Grain oriented electrical steel	55
4.1.1.2	Amorphous	55
4.1.1.3	Ferrite	55
4.1.1.4	Nanocrystalline	58
4.1.2	Constructions of MFT	61
4.2	Core Losses	62
4.2.1	Core Loss Mechanisms	62
4.2.2	Core Loss Models	64
4.2.2.1	Hysteresis based Loss Models	64
4.2.2.2	Steinmetz Equation based Models	68
4.2.2.3	Comparison of two Candidate Models	70
4.3	Conclusion	72
5	Optimized Design and FEM Simulation Validation	75
5.1	Flow Chart	75
5.2	Topology of the DC-DC Converter	77
5.2.1	Specification of the Design	79
5.3	Design Procedure	81
5.3.1	Material Constants	81
5.3.2	Geometric Variables	82
5.3.2.1	Geometric Parameters of the Core	84
5.3.2.2	Geometric Parameters of the Winding	85
5.3.3	Adaptation of Analytical Models	88
5.3.3.1	Magnetizing Inductance	88
5.3.3.2	Leakage Inductance	89
5.3.3.3	Parasitic Capacitance	90
5.3.3.4	Core Loss	91
5.3.3.5	Winding Loss	91
5.3.3.6	Active Oil Cooling System and Hot Spot	91
5.4	Candidate Selection and Optimization Results	96
5.5	FEM Simulation Validation	99
5.6	Conclusion	100

6	Prototype and Experimental Validation	103
6.1	Prototype	103
6.2	Experimental Validation	106
6.2.1	Small-signal Measurement of Electrical Parameters	106
6.2.2	Oil Seal Performance and Dielectric Withstand Test	108
6.2.3	Core Loss Measurements of Cut Nanocrystalline Cores	109
6.2.4	Efficiency Measurements in a Back to Back Converter	110
6.3	Conclusion	114
7	Summary, Conclusions and Future work	117
A	Appendix	121
	Bibliography	125
