Preface	ix
1 MACROSYSTEMS: DEFINITIONS AND EXAMPLES	1
1.1 Introduction	1
1.2 Macrosystem structure	3
1.3 Examples	4
2 MODELS OF STATIONARY STATES FOR HOMOGENEOUS MACROSYSTEMS	13
2.1 Phenomenological scheme	13
2.2 Stochastic characteristics of macrostates for unconstrained system	17
2.3 Morphological properties of stochastic characteristics	28
2.4 Set of feasible macrostates	35
2.5 Variational principle. Models of stationary states (MSS) . . .	43
2.6 Optimality conditions for MSS	48
2.7 MSS of homogeneous macrosystems with linear resource con- sumption ("sharpness" of maximum)	53
2.8 Bibliographical comments	66
3 PARAMETRIC PROPERTIES OF MSS	73
3.1 Parameterization of MSS with complete consumption of re- sources	73
3.2 Theorems on implicit functions	78

3.3	Parametric properties of B -model with the complete consumption of resources	93
3.4	Parametric properties of F -models with the complete consumption of resources	107
3.5	Parametric properties of E -models with the complete consumption of resources	114
3.6	Parameterization and qualitative analysis of MSS with the incomplete resources consumption	120
3.7	Perturbed mathematical programming problems	124
3.8	Parametric properties of MSS with the incomplete consumption of resources	133
4	COMPUTATIONAL METHODS FOR DETERMINING THE STATIONARY STATES OF HOMOGENEOUS MACROSYSTEMS	137
4.1	Classification of computational methods	137
4.2	Theorems on convergence of multiplicative algorithms	142
4.3	Analysis of multiplicative algorithms for macrosystems with linear consumption of resources	162
4.4	Multiplicative algorithms for MSS of macrosystems with non-linear consumption of resources	174
4.5	Experimental study of multiplicative algorithms for MSS . . .	186
5	PROBABILISTIC HIERARCHICAL STRUCTURES	195
5.1	Definition of probabilistic hierarchy	195
5.2	Classification and characteristics of probabilistic hierarchical structures	198
5.3	Models of ensembles	205
5.4	Models of mechanisms for forming hierarchical structures . .	227
6	MODELLING AND ANALYSIS OF INTERREGIONAL EXCHANGE OF CONSTRUCTION MATERIALS	237
6.1	Interregional exchange of construction materials as object of analysis	237
6.2	Characteristics of state of an interregional exchange system .	239

6.3	Macrosystem model of single-product interregional exchange .	242
6.4	Modeling and analysis of structure of interregional transport and economical connections in cement industry (single-product model)	249
6.5	Multi-product macrosystem models of interregional exchange	256
7	IMAGE RECONSTRUCTION	265
7.1	Main notions	265
7.2	Examples	267
7.2.1	Recovering "blurred" images	267
7.2.2	Recovering defocused images	269
7.2.3	Computer tomography	271
7.2.4	Radioastronomy	274
7.2.5	Engineering geophysics	275
7.3	Methods for estimating the image density function	276
7.4	Physical justification of entropy estimation	280
7.5	Multiplicative algorithm for image recovering	289
	Appendix	297
	Bibliography	313
