

Contents

List of Abbreviations	xiii
List of Algorithms	xv
List of Listings	xv
1 Introduction	1
2 Multigrid Methods for Solving Partial Differential Equations	3
2.1 Discretization of Partial Differential Equations	3
2.1.1 Finite Difference Method	4
2.1.2 Model Problem	5
2.1.3 Stencil Codes	7
2.1.4 Systems of Partial Differential Equations	11
2.2 Basic Iterative Methods	12
2.2.1 Jacobi and Gauss-Seidel	14
2.2.2 Convergence	18
2.3 Multigrid Methods	21
2.3.1 Smoothing	24
2.3.2 The Coarse-Grid Correction Scheme	29
2.3.3 Restriction and Prolongation	32
2.3.4 The Multigrid Cycle	35
3 Formal Languages and Evolutionary Program Synthesis	39
3.1 Formal Languages and Grammars	39
3.1.1 The Chomsky Hierarchy	41
3.2 Evolutionary Program Synthesis	44
3.2.1 Representation	46
3.2.2 Initialization	53
3.2.3 Fitness Evaluation and Selection	55
3.2.4 Mutation and Recombination	58
4 A Formal Language for Expressing Multigrid Methods	63
4.1 Multigrid States	64
4.2 State Transition Functions	69
4.3 A Novel Family of Multigrid Grammars	73

4.3.1	Grammar-Based Algorithm Generation	80
4.3.2	Search Space Estimation	85
5	Automated Multigrid Solver Design – Part 1: Core Implementation	91
5.1	Intermediate Representation	92
5.2	Grammar Generation	103
5.2.1	State Transition Functions	105
5.2.2	Genetic Programming in DEAP	109
5.2.3	Variable Encoding	113
5.2.4	Productions	117
5.3	Evolutionary Program Synthesis	122
5.3.1	Evolutionary Operators	125
5.3.2	Fitness Evaluation and Selection	127
5.3.3	Search Algorithm	135
6	Automated Multigrid Solver Design – Part 2: Generalization and Parallelization	139
6.1	Generalization	139
6.1.1	Objective Function Definition	140
6.1.2	Generalization Procedure	142
6.1.3	Implementation	144
6.2	Distributed Parallelization	147
6.2.1	Empirical Execution Time Analysis	147
6.2.2	Parallelization Method	149
6.2.3	Implementation	151
7	Experiments and Discussion	155
7.1	Multigrid Cycles for Solving Common Partial Differential Equations	155
7.1.1	Problem Formulation	156
7.1.2	Solver Configuration	159
7.1.3	Experimental Settings and Evaluation Platform	160
7.1.4	Analysis of the Evolutionary Algorithm	162
7.1.5	Evaluation of the Evolved Multigrid Methods	167
7.2	Multigrid-Based Preconditioners for the Indefinite Helmholtz Equation	176
7.2.1	Problem Formulation	178
7.2.2	Solver Configuration	179
7.2.3	Experimental Settings and Evaluation Platform	181

7.2.4	Evaluation of the Evolved Multigrid Methods . . .	184
7.2.5	Analysis of the Discovered Algorithmic Features .	190
8	Related Work and Conclusion	197
	Appendix	203
A	Intermediate Representation	203
B	Genetic Programming	206
C	Full-Approximation Scheme	208
	Bibliography	209
