

Contents

Preface	v
Contributors	xvii
1. The Molecular Structure and Gating of Calcium Channels	1
SUSAN M.J. DUNN, MANJUNATHA B. BHAT, and A. MURAT ÖZ	
Multiplicity of Voltage-Dependent Calcium Channels	2
Structure of a Skeletal Muscle L-Type Calcium Channel	2
The Roles of DHP-Binding Proteins in Skeletal Muscle	5
Homologous Calcium Channels	6
Gating of Voltage-Dependent Calcium Channels	6
Structure–Function Relationships of VDCCs	10
Regulation of Calcium Channels	11
Conclusion	12
2. Calcium Signals in Cell Proliferation, Differentiation, and Death	19
JAMES F. WHITFIELD	
Cell Cycle Signals	19
Liver Regeneration	21
Keratinocytes	40
3. Role of Calcium in Stimulus-Secretion Coupling in Exocrine Glands	59
CATHERINE S. CHEW	
Requirement for Calcium in Exocrine Secretion	60
Calcium Entry, Release, and Efflux Mechanisms	62
Cellular Mechanisms Involved in Agonist-Stimulated Increases in Intracellular Calcium in Exocrine Cells	66
Summary and Conclusions	77

4. Calcium Channels, the Pancreatic Islet, and Endocrine Secretion	91
JOSEPH C. DUNBAR	
Ion Channels in β Cells	91
Calcium Channels in α Cells	93
Conclusions	94
5. Calcium Channels in Cells of the Anterior Pituitary	98
DAVID M. LAWSON	
General Properties of Calcium Channels in Pituitary Cells	99
Calcium Channels in Pituitary Lactotrophs	100
Calcium Channels in Somatotrophs	102
Calcium Channels in Corticotrophs and Thyrotrophs	103
Calcium Channels in Gonadotrophs	103
Conclusion	104
6. Role of Calcium in the Secretion of Atrial Natriuretic Peptide	109
MARY F. WALSH	
The Langendorff Preparation	110
Isolated Atrial Preparations	110
Cardiomyocytes in Culture	112
7. Intracellular Ca^{2+} and Insulin Action: Possible Role in the Pathogenesis of Syndrome X	116
JOSEPH LEVY and JAMES R. SOWERS	
Physiologic Regulation of the Intracellular Calcium Concentration	116
The Role of $[\text{Ca}^{2+}]_i$ in Insulin Action and Insulin Resistance . .	118
Abnormal $[\text{Ca}^{2+}]_i$ Homeostasis in Diabetes	122
Abnormal $[\text{Ca}^{2+}]_i$ Homeostasis in Hypertension and Obesity	123
Abnormal $[\text{Ca}^{2+}]_i$ and Syndrome X	124
High $[\text{Ca}^{2+}]_i$ and Atherosclerosis	125
Conclusions	126
8. $[\text{Ca}^{2+}]_i$ and Contraction of Arterial Smooth Muscle	137
CHRISTOPHER M. REMBOLD	
Regulation of Myoplasmic $[\text{Ca}^{2+}]$	137
Regulation of Myosin Light Chain Phosphorylation ($[\text{Ca}^{2+}]_i$ Sensitivity)	139
Regulation of Contractile Force (The Latch Phenomenon)	139
Conclusion	143

9. Autoimmunity Against the Nicotinic Acetylcholine Receptor and the Presynaptic Calcium Channel at the Neuromuscular Junction	151
ANGELO A. MANFREDI, MARIA PIA PROTTI, MATTEO BELLONE, LUCIA MOIOLA, and BIANCA M. CONTI-TRONCONI	
Myasthenia Gravis and Lambert-Eaton Myasthenic Syndrome:	
A Brief History	152
The Autoantigen in MG: Structure of the Nicotinic Acetylcholine Receptor	154
The Autoantigen in LEMS: Structure and Function of the ω -Conotoxin-Sensitive VOCC	155
The Effectors of Myasthenic Symptoms: Autoantibodies Against Membrane Proteins Involved in the Cholinergic Transmission	156
B and T Epitopes on the AChR Molecule	158
Pathogenetic Mechanisms in MG	168
Pathogenetic Mechanisms of LEMS	174
Possible Similarities in the Pathogenesis of LEMS and MG ...	175
10. Clinical Pharmacology of Calcium Channels	190
TORE K. USKI, EDWARD D. HÖGESTÄTT, and KARL-ERIK ANDERSSON	
Classification of Plasmalemmal Calcium Channels	190
Classification of Calcium Channel Modulators	193
Clinical Profile and Tissue Selectivity	197
Basis for Tissue Selectivity of L-Channel Antagonists	201
Clinical Use of Ca^{2+} Antagonists	205
Conclusion	212
11. Hormonal Modulation of Sodium Pump Activity:	
Identification of Second Messengers	226
DOUGLAS R. YINGST	
Adrenal Glomerulosa Cells	229
Heart	230
Skeletal Muscle	231
Liver	231
HeLa Cells Transfected with the 5-HT _{1A} Receptor	232
Platelets	232
Neurons	233
Kidney	233
Rat Brain Synaptosomes	233
Adipocytes	234
Summary	234

12. Endogenous Regulation of Sodium Pump Activity	241
PETER A. DORIS	
Volume Expansion and Sodium Pump Inhibitor	242
Sodium Pump Inhibitor and Hypertension	243
Cellular Mechanisms Linking Hypertension, Fluid Balance, and the Sodium Pump	244
The Search for an Endogenous Digitalis-Like Factor (EDLF)	245
Possible Sources of Endogenous Digitalis-Like Factor	247
Sodium Pump Inhibition in the Clinical Setting	252
Conclusion	254
13. Structure, Gating, and Clinical Implications of the Potassium Channel	261
GIANFRANCO PRESTIPINO, MARIO NOBILE, and EGIDIO MAESTRONE	
An Approach to the Study of Potassium Channels	262
Biophysical Properties	264
Different Types of Potassium Channel Conductance	268
Clinical Implications	272
Conclusions	276
14. Potassium Channels in Skeletal Muscle	282
RALF WEIK	
Ionic Channels in Skeletal Muscle	287
Involvement of Potassium Channels in Selected Muscle Diseases	300
Conclusions	305
15. The Role of Potassium Ions in the Control of Heart Function	317
FRITZ MARKWARDT	
Permeability	319
Rectification	319
The Delayed Rectifier (IK_{dr})	319
The Inward Rectifier (IK_{ir})	322
The Transient Outward Current (IK_{to})	324
The Calcium-Dependent Potassium Current (IK_{Ca})	326
The $[ATP]_i$ -Dependent Potassium Current (IK_{ATP})	327
The ACh-Sensitive Potassium Current (IK_{ACh})	330
The Na-Dependent Potassium Current (IK_{Na})	332
The Arachidonic Acid-Activated Potassium Current (IK_{AA}) . .	333
The Plateau-Potential Potassium Current (IK_P)	334
Summary	334

16. Nonrenal Potassium Homeostasis: Hypokalemia and Potassium Depletion – Role of Skeletal Muscle Potassium-Pump (Na^+, K^+ -ATPase)	349
KELD KJELDSEN	
Body Potassium Homeostasis	349
Skeletal Muscles and Potassium Homeostasis	350
Rapid Regulation of the Na,K Pump in Skeletal Muscle	353
Long-Term Regulation of the Na,K Pump in Skeletal Muscle	356
Etiology of Hypokalemia and Potassium Depletion	359
Methods for the Assessment of Hypokalemia and Potassium-Depletion	361
Consequences of Hypokalemia and Potassium Depletion	363
Therapy of Hypokalemia and Potassium Depletion	364
Conclusion	365
17. The Clinical Pharmacology of Potassium Channels	373
P.N. STRONG	
Role of Potassium Channels in Cell Function	373
Potassium-Channel Subtypes	374
Hypoglycemic Sulphonylureas	375
Class III Anti-Arrhythmics	377
Drug Design Based on the Structure of Potassium-Channel Toxins	379
Potassium-Channel Openers	382
Conclusion	386
18. Ion Transport in Vascular Smooth Muscle and the Pathogenesis of Hypertension	395
CHRISTIAN AALKJÆR and KELD KJELDSEN	
Ion Transport in Vascular Smooth Muscle and How This Relates to Contraction	396
Pathophysiologic Changes in the Vasculature in Essential Hypertension	407
Conclusion	409
19. Calcium Ion Homeostasis in the Aging Brain: Regulation of Voltage-Dependent Calcium Channels	418
FIORENZO BATTAINI, STEFANO GOVONI, MARIA SANDRA MAGNONI, and MARCO TRABUCCHI	
Calcium Ion Homeostasis at the Neuronal Level	418
Calcium and the Aging Nervous System	420
VDCC and Brain Aging	421
Functional Expression of VDCC During Aging	424
Conclusions	426

20. Interactions of Ethanol with Ion Channels: Possible Implications for Mechanisms of Intoxication and Dependence	436
WOJCIECH KOSTOWSKI	
Ethanol and Cellular Calcium Mechanisms	436
ET-OH and Na ⁺ ,K ⁺ -ATPase (NKA)	443
ET-OH and the Na ⁺ Channel	444
ET-OH and NMDA-Activated Ion Current	445
ET-OH Interaction with GABA-Induced Chloride Current	447
ET-OH and 5-HT-3 Receptor	448
Conclusions	448
21. Structure and Function of Receptor-Mediated Chloride Channels in the Central Nervous System	455
KINYA KURIYAMA and MASAOKI HIROUCHI	
The GABA _A Receptor-Mediated Cl ⁻ Channel	455
Glycine Receptor-Mediated Cl ⁻ Channels	459
Conclusions	459
22. Characterization of Ion Channels in the Central Nervous System: Insights from Radioligand Binding, Autoradiography, and In Situ Hybridization Histochemistry	463
ANDREW L. GUNDLACH	
Classes of Ion Channels and Their Roles in the CNS	464
Techniques for the Detection of Ion Channels in the CNS	464
Studies of Ion Channel/Receptor Recognition Sites Using Radioligands	466
Neuroanatomic Localization of Ion Channel/Receptors by In Vitro Autoradiography	470
Cellular and Anatomic Localization of Ion Channel/Receptor Expression by In Situ Hybridization Histochemistry	478
Studies of Ion Channel Receptor Proteins in Human Brain and Clinical Applications of Ion Channel Research	491
Future Developments	492
23. Chloride Channels in Cystic Fibrosis	500
CAROLE M. LIEDTKE	
Historical Perspective	500
Cl ⁻ Channels in Epithelia	501
Respiratory System	504
Intestinal Tract	509
Sweat Gland	513
Future Considerations	516

24. Cyclic Nucleotide-Activated Channels	526
ANNA MENINI and ROBERT R.H. ANHOLT	
Transduction-Excitation Coupling in Sensory Systems	527
Ion Permeation Through Cyclic Nucleotide-Activated Channels	533
Structure of Cyclic Nucleotide-Activated Channels	538
25. Transport Systems for Arsenic, Antimony, and Cadmium Ions Encoded by Bacterial Plasmids	549
ANITA R. LYNN and BARRY P. ROSEN	
Plasmid-Encoded Transport of Oxyanions of Arsenic and Antimony	550
Plasmid-Mediated Cadmium Resistance in <i>Staphylococcus</i> <i>aureus</i>	561
Cadmium, Zinc, and Cobalt Resistance in <i>Alcaligenes</i> <i>eutrophus</i>	567
Conclusion	568
Index	575
