

Table of Contents

1.	Turing Computability and Complexity	1
1.1	Models of Sequential Computation	2
1.1.1	A Simple Model: the Finite-State Machine	3
1.1.2	Turing Machines	7
1.2	Complexity	8
1.2.1	Nondeterministic Computations	10
1.2.2	Randomized Algorithms	11
1.2.3	Parallel Computation	13
1.3	Cellular Machines	13
1.4	Prerequisites	14
	References	15
2.	Cellular Automata	17
2.1	Finite-State Automata	17
2.2	Regular Graphs	20
2.3	Local Rules and Global Maps	22
2.3.1	Cellular Spaces	23
2.3.2	Local Rules	25
2.3.3	Global Maps and Dynamical Systems	27
2.4	Fundamental Questions	28
2.5	Notation	31
2.6	Problems	32
2.7	Notes	35
	References	37
3.	Linear Cellular Automata	39
3.1	Linear Rules	39
3.2	Basic Properties	41
3.2.1	Global Injectivity and Surjectivity Modulo m	42
3.2.2	Self-reproduction with Linear Automata	47
3.2.3	Linear Automata on Rings and Semigroups	47
3.3	Global Dynamics via Fractals	49
3.4	The Role of Linear Rules	54
3.5	Problems	55
3.6	Notes	59
	References	60

4.	Semi-totalistic Automata	63
4.1	Semi-totalistic Rules	63
4.1.1	An Example: Conway's Game of LIFE	64
4.1.2	Nomenclature for Totalistic Rules	64
4.2	Construction and Computation Universality	65
4.2.1	Computation Universality of LIFE	66
4.2.2	Constructibility and Self-reproduction	67
4.2.3	Provable Computation Universality	70
4.3	Restricted Totalistic Rules	72
4.4	Threshold Automata	74
4.5	Problems	75
4.6	Notes	76
	References	77
5.	Decision Problems	79
5.1	Algorithmic and Dynetic Problems	79
5.2	1D Euclidean Automata	82
5.3	2D Euclidean Automata	84
5.3.1	Reversibility is Unsolvable	85
5.3.2	Surjectivity is Unsolvable	86
5.4	Noneuclidean Automata	87
5.5	Complexity Questions	89
5.6	Problems	91
5.7	Notes	93
	References	94
6.	Neural and Random Boolean Networks	97
6.1	Types of Generalizations	97
6.2	Other Parallel Models	100
6.3	Summary of Results	102
6.4	Proofs	106
6.4.1	A Hierarchy	106
6.4.2	A Universal Neural Network	109
6.4.3	Equivalence of Cellular Automata and Neural Networks	111
6.4.4	Equivalence of Neural Networks and Random Networks	111
6.4.5	The Stability Problem is Neurally Unsolvable	112
6.5	Problems	113
6.6	Notes	113
	References	115
7.	General Properties	117
7.1	Metric Preliminaries	118
7.1.1	Metrics and Topologies	118
7.1.2	Convergence and Continuity	120
7.2	Basic Results	121
7.2.1	The Moore-Myhill Theorem	122
7.2.2	Nondeterministic Cellular Automata	126

7.3	Injectivity, Surjectivity and Local Reversibility	130
7.4	Some Generalizations	131
7.4.1	Neural and Random Networks	131
7.4.2	Combinatorial Generalizations on Euclidean Spaces	134
7.5	Problems	135
7.6	Notes	137
	References	138
8.	Classification	141
8.1	Finite Networks	142
8.1.1	The Difficulties	143
8.1.2	Complexity of Classifying Finite Networks	144
8.2	Wolfram Classification	147
8.3	Classification via Limit Sets	149
8.3.1	Culik-Yu's Classes and Ishii's Classes	149
8.3.2	About Entropy	151
8.4	Mean Field Theory	153
8.5	Local Structure Theory	156
8.5.1	Zeroth-order and First-order Local Structure Theories	157
8.5.2	Higher-order Local Structure Theories	158
8.6	Other Classifications	158
8.7	Problems	161
8.8	Notes	163
	References	165
9.	Asymptotic Behavior	167
9.1	Linear Rules	167
9.1.1	Linear Automata on Tori	167
9.1.2	Linear Automata on the Line	170
9.2	Exact Solution	171
9.3	Simulation in Continuous Systems	173
9.3.1	Discrete Computation by Continuous Systems	173
9.3.2	Nonlocal Properties	176
9.3.2.1	The ϕ -transform	177
9.3.2.2	Sarkovskii's Theorem	181
9.4	Observability	184
9.4.1	Observability of the Identity	185
9.4.2	Toggle Rules and the Extension Property	186
9.4.3	Observability of Linear Cellular Automata	188
9.4.4	Observability in Neural Networks	190
9.5	Problems	192
9.6	Notes	194
	References	196
10.	Some Inverse Problems	199
10.1	Signals and Synchronization	200
10.1.1	Synchronization of a Line	200

10.1.2	Synchronization of a Network	204
10.1.3	Signals in Dimension 1	204
10.1.4	Clocks	206
10.2	Formal Language Recognition	209
10.2.1	Models	209
10.2.2	A Speedup Theorem	212
10.3	Picture Languages	213
10.3.1	The Issue of Representation	214
10.3.2	π -Languages in Spaces of Linear Growth	215
10.3.3	2D-Euclidean Languages	216
10.3.4	Recognition over Spaces of Exponential Growth	218
10.3.5	Recognition over Spaces of Subexponential Growth	220
10.4	Problems	223
10.5	Notes	225
	References	226
11.	Real Computation	231
11.1	Representation and Primitives	232
11.2	Exact Computation	234
11.2.1	Constant-time Computation	234
11.2.2	Variable-time Computation	237
11.3	Approximate Computation by Neural Nets	239
11.3.1	Relative Shadowing	239
11.3.2	Shadowing Bases	244
11.4	Problems	250
11.5	Notes	251
	References	253
12.	A Bibliography of Applications	255
12.1	Physics	255
12.2	Chemistry	255
12.3	Biology	256
12.4	Computer Science	256
12.5	Artificial Intelligence and Cognitive Science	257
12.6	Miscellaneous	257
	References	258
	Author Index	263
	Symbol Index	267
	Subject Index	269
