Introduction: From Maxwell's equations to geometrical optics	1
<i>Horst Weber, Berlin</i>	
I.1 Maxwell's equations	3
I.1.1 Material equations (constitutive relations) in general	4
I.1.2 Material equation for linear media	5
I.2 Monochromatic fields and complex notation	6
I.2.1 Temporal Fourier-transformation and spectrum	6
I.2.2 Linear media	7
I.2.3 The Lorentz-model of interaction, an example of a linear dielectric medium	8
I.3 Energetic considerations	10
I.3.1 Energy density	10
I.3.2 The Poynting vector, intensity and energy conservation	10
I.3.3 Transparent media	11
I.4 The wave-equations and simple solutions	12
I.4.1 The homogeneous isotropic linear medium with no charges ($\sigma = 0, \rho = 0$)	13
I.4.2 A plane wave in isotropic transparent media	13
I.4.3 A plane wave in a dissipative medium	16
I.4.4 Polarization of the light wave	17
I.4.5 Anisotropic, linear, non-absorbing dielectric media	18
I.4.6 Non-linear dielectric media	20
I.4.7 The Helmholtz-equation and spherical waves	21
I.5 Boundary conditions	22
I.6 Diffraction of light	23
I.6.1 The reduced wave equations	23
I.6.2 Fresnel's diffraction integral	25
I.6.3 The Gaussian beam	26
I.6.4 The Fraunhofer diffraction integral	28
I.7 Geometrical optics	29
I.7.1 The eikonal equation	29
I.7.2 Fermat's principle	31
I.7.3 The ray equation	33
Bibliography	34

1	Optical imaging	35
	<i>Jürgen Kross, Berlin</i>	
1.1	Introduction	35
1.2	Ray propagation	38
1.3	Reflection, plane mirrors	40
1.4	Refraction, total reflection and imaging by plane surfaces	47
1.4.1	Refraction	47
1.4.2	Total reflection	51
1.4.3	Image formation by plane refracting surfaces	57
1.4.4	Plane parallel plates	58
1.4.5	Prisms	61
1.5	Paraxial optics	72
1.5.1	Principal values and principal points	73
1.5.2	Image formation by single surfaces	79
1.5.3	Imaging by several surfaces, Gaussian matrices	84
1.5.4	Lenses, compound systems	91
1.6	Stops and ray bundles	97
1.7	Aberrations	106
1.7.1	Dispersion of optical media	106
1.7.2	Imaging with finite aperture and fields	113
1.7.2.1	Aberrations of a single refracting surface	116
1.7.2.2	Aberrations of compound systems	125
1.8	The human eye	129
1.9	Optical instruments	139
1.9.1	Radiation and information transfer	139
1.9.1.1	Radiation transfer	139
1.9.1.2	Information transfer – by image formation	141
1.9.2	The main optical instruments	146
1.9.2.1	Loupe (magnifying glass)	146
1.9.2.2	The microscope	148
1.9.2.3	The telescope	160
1.9.2.4	Spectroscopic instruments	169
1.9.2.5	The photographic lens	169
	Bibliography	175
2	Dispersion and absorption of light	177
	<i>Hans-Joachim Eichler, Berlin</i>	
2.1	Measurement of the velocity of light	177
2.1.1	Römer's method	178
2.1.2	Bradley's method	179
2.1.3	Fizeau's method	180
2.1.4	Foucault's method	181
2.1.5	Modern methods	182
2.2	Phase velocity, group velocity	185
2.3	Dispersion of light: normal dispersion	190

2.4	Achromatic and direct-vision prisms; chromatic aberrations	199
2.5	Infrared and ultraviolet radiation	205
2.6	Absorption of radiation	226
2.7	Dispersion of light: anomalous dispersion	231
2.8	Dispersion and absorption of weakly absorbing materials	238
2.9	Dispersion and absorption of metals	252
2.10	Spectral analysis, emission and absorption spectroscopy	260
	Bibliography	279
3	Interference, diffraction, wave guiding	281
	<i>Hans-Joachim Eichler, Berlin</i>	
3.1	Interference of two light waves; coherence and incoherence	281
3.2	Fresnel's mirror experiment and its variants	290
3.3	Interference phenomena in thin layers	295
3.4	Two-beam interferometers	308
3.5	Multiple-beam interference; interference spectroscopy	312
3.6	Standing light waves; color photography after Lippmann	325
3.7	Light beats	328
3.8	Fundamental phenomena of diffraction; diffraction at slits, rectangular and circular apertures	331
3.9	Resolving power of optical instruments (telescope, eye, microscope, prism)	342
3.10	Diffraction at regularly spaced apertures; Young's interference experiment; diffraction gratings; ultrasonic gratings	348
3.11	Diffraction at two- and three-dimensional gratings; X-ray diffraction	363
3.12	Image formation in the microscope; phase contrast and schlieren method	375
3.13	Diffraction at particles, light scattering	388
3.14	Holography	395
3.15	Waveguides and glass fibers	415
3.16	Scanning near-field optical microscopy	432
	Bibliography	437
4	Polarization and bi-refringence of light	439
	<i>Kurt Weber, Berlin</i>	
4.1	Polarization by reflection and by ordinary refraction	439
4.2	Theory of reflection, refraction and polarization; Fresnel formulas	450

XIV Contents

4.3	Total reflection, generation of elliptically and circularly polarized light	458
4.4	Polarization of the reflected light for absorbing media; metallic reflection	470
4.5	Bi-refringence and polarization of optically uniaxial crystals	478
4.6	Optically bi-axial crystals	506
4.7	Polarizers: Nicol prism, Glan-Thompson prism, plate of tourmaline, polarizing filters, Wollaston prism, polarizing photometer	510
4.8	Rotation of the plane of vibration of linearly polarized light (optical activity)	517
4.9	Optical behavior and symmetry of crystals	529
4.10	Interferences at crystal plates in a linearly polarized parallel ray path	538
4.11	Interference in 'convergent' light (conoscopic observations)	550
4.12	Liquid crystals	556
4.13	Artificial bi-refringence in isotropic media	569
4.14	Zeeman effect and Stark effect	576
	Bibliography	586

5 Optical radiation measurement 587 *Michael Krystek, Braunschweig*

5.1	Introduction	587
5.2	Basic units and definitions	589
5.3	Radiation of heat	594
5.4	Kirchhoff's law	595
5.5	Black body radiation, cavity radiation	598
5.6	The law of Stefan and Boltzmann	601
5.7	The shifting law of Wien	603
5.8	The radiation laws	606
5.9	Radiation of non-black radiators	610
5.10	Characteristic radiation temperatures, pyrometry	613
5.11	Weighting of radiation by the human eye, photometry	617
5.12	Realization of the unit of light, standard light sources	621
5.13	Photometric methods of measurement and measuring instruments	626
5.14	Illuminating engineering	631
	Bibliography	638

6 Colorimetry	641
<i>Heinwig Lang, Weiterstadt</i>	
6.1 Colorimetry and physics	641
6.2 Spectral properties of light sources	645
6.3 Optical filters	649
6.4 Spectral properties of surfaces	653
6.5 Photoelectric detectors in photometry and colorimetry	659
6.6 Additive color mixing and Grassmann's laws	661
6.7 Color matching and tristimulus values	672
6.8 Color matching curves	675
6.9 CIE standard colorimetric observers	682
6.10 Measurement of color	691
6.11 Physiology of color vision	696
6.12 Uniform color spaces and color differences	701
6.13 Object colors and color order systems	708
6.14 Methods of color reproduction	714
Bibliography	720
7 Quantum optics	723
<i>Horst Weber, Berlin</i>	
7.1 The photoelectric effect	723
7.2 Einstein's theory of the photoelectric effect	729
7.3 Applications of the photoelectric effect	734
7.4 The particle aspects of the photon	743
7.5 The meaning of quantum electrodynamics	750
7.6 The absorption and emission of light	759
7.6.1 Properties of atoms	759
7.6.2 Interaction of light with two-level atoms	765
7.7 Scattering of photons	775
7.7.1 General considerations	775
7.7.2 Thomson-scattering	777
7.7.3 Compton-scattering	778
7.7.4 Raman- and Brillouin-scattering	787
7.8 Statistical properties of the electromagnetic field	806
7.9 Generation of coherent light – the LASER	825
7.9.1 The feedback principle and light amplification	826
7.9.2 Generation of inversion	829
7.9.3 Rate equations, self-oscillations, and output power of a laser oscillator	832

7.9.4	Examples of laser oscillators	835
7.9.5	Optical resonators	843
7.9.6	Generation of short, intense light pulses	856
	Bibliography	863
8	Nonlinear optics	865
	<i>Horst Weber, Berlin</i>	
8.1	The generalized relation between the electric field and the electric polarization of a medium	867
8.1.1	Propagation of light in a linear medium	867
8.1.2	The characteristic of the oscillating electron	868
8.1.3	Examples of some nonlinear effects	871
8.2	The susceptibilities of second and third order nonlinearities	873
8.2.1	Monochromatic waves	875
8.2.2	Kleinman's rule and further reductions of the χ' -tensor	875
8.2.3	Frequency mixing	878
8.2.4	Third order effects	878
8.3	Second harmonic generation	880
8.3.1	The wave equation of nonlinear optics and solutions	880
8.3.2	Realization of phase matching	884
8.4	Parametric systems	891
8.5	More about quadratic effects	895
8.5.1	The Pockels-effect (linear, electro-optical effect)	895
8.5.2	Optical rectification	902
8.6	Third order effects	903
8.6.1	Electro-optical effects	903
8.6.2	Degenerate four-wave mixing	912
8.6.3	Nonlinear absorption	915
8.7	Nonlinear resonance processes	917
8.7.1	Two-photon-excitation	918
8.7.2	Ionization by high power radiation	919
8.8	Generation of UV-light by higher harmonics	923
8.9	Optical instabilities	926
	Bibliography	930
9	X-ray optics	933
	<i>Günter Schmahl, Göttingen</i>	
9.1	X-ray sources	934
9.1.1	Synchrotron radiation sources	934
9.1.2	Plasma sources	937
9.2	Features of X-ray optics	938
9.2.1	Interaction of soft X-rays with matter	938
9.2.2	Grazing incidence mirrors	940
9.2.3	Mirrors for normal incidence reflection: multilayer mirrors	943

9.2.4	Zone plates	945
9.3	X-ray detectors	950
9.4	X-ray microscopy	951
9.4.1	X-ray microscopes	952
9.4.2	Scanning X-ray microscope	956
9.5	X-ray lithography	957
	Bibliography	958
10	Matter waves, electron optics	961
	<i>Heinz Niedrig, Berlin</i>	
10.1	Matter waves	961
10.2	Electron diffraction and interferometry	966
10.3	Diffraction of other material particles	978
10.4	Elements of electron optics	981
10.4.1	Electron optical refractive index	981
10.4.2	Electron lenses, focal length	982
10.4.3	Aberrations of electron lenses	994
10.5	Electron microscopy	1003
10.5.1	The transmission electron microscope	1004
10.5.2	Atomic resolution imaging	1008
10.5.3	Electron holography	1014
10.5.4	The scanning electron microscope	1019
10.6	Electron energy loss spectroscopy and microanalysis	1023
10.7	Electron beam lithography	1026
10.8	Scanning tunneling microscopy	1030
10.9	The uncertainty principle for matter waves	1035
	Bibliography	1039
11	De Broglie wave optics: neutrons, atoms and molecules	1043
