List of Frequently Used Symbols	XI
List of Selected Scientists	XVII
Introduction	1
1 Mathematical Preparation	3
1.1 Repetitions from Vector Algebra	5
1.2 Tensor Algebra	10
1.2.1 Tensor Product and Tensor Components	17
1.2.2 The Eigenvalue Problem	21
1.2.3 Special Tensors	29
1.2.4 Tensors of Higher Order	35
1.2.5 Isotropic Tensor-Functions	46
1.3 Tensor Analysis	53
1.4 The EUCLIDEAN Point Space	71
1.4.1 The Covariant Derivative	76
1.4.2 Integral Theorems	87
2 Kinematics	91
2.1 Placements of Bodies	91
2.2 Time Derivatives	94
2.3 Spatial Derivatives	95
3 Balance Laws	121
3.1 Mass	121
3.2 The General Balance Equation	122
3.3 Observer-Dependent Laws of Motion	130
3.4 Stress Analysis	136
3.5 The Thermodynamical Balances	149
4 The Principles of Material Theory	153
4.1 Determinism	153
4.2 Local Action	154
4.3 EUCLIDEAN Invariances	155
4.4 Extension of the Principles to Thermodynamics	159
5 Internal Constraints	167
5.1 Mechanical Internal Constraints	167
5.2 Thermo-Mechanical Internal Constraints	172
6 Elasticity	177
6.1 Reduced Elastic Forms	178

6.2	Thermo-Elasticity	179
6.3	Change of the Reference Placement	180
6.4	Elastic Isomorphy	182
6.5	Elastic Symmetry	185
6.6	Isotropic Elasticity	195
6.7	Incremental Elastic Laws	200
6.8	Symmetries in Thermo-Elasticity	205
7	Hyperelasticity	209
7.1	Thermodynamical Restrictions	209
7.2	Hyperelastic Materials	211
7.3	Hyperelastic Isomorphy and Symmetry	216
7.4	Isotropic Hyperelasticity	218
8	Solutions	231
8.1	Boundary Value Problems	231
8.2	Universal Solutions	238
9	Inelasticity	251
10	Plasticity	255
10.1	Elastic Ranges	256
10.2	Thermoplasticity	286
10.3	Viscoplasticity	293
10.4	Plasticity Theories with Intermediate Placements	296
10.5	Crystal Plasticity	306
10.6	Material Plasticity	319
