

Contents

1. Hamiltonian Formulation of Beam Dynamics	1
1.1 Hamiltonian Formalism	1
1.1.1 Lagrange Equations	1
1.1.2 Hamiltonian Equations	4
1.1.3 Canonical Transformations	6
1.1.4 Action-Angle Variables	10
1.2 Hamiltonian Resonance Theory	12
1.2.1 Nonlinear Hamiltonian	12
1.2.2 Resonant Terms	16
1.2.3 Resonance Patterns and Stop-Band Width	18
1.2.4 Third-Order Resonance	25
1.3 Hamiltonian and Coupling	29
1.3.1 Linearly Coupled Motion	29
1.3.2 Higher-Order Coupling Resonances	38
1.3.3 Multiple Resonances	39
1.4 Symplectic Transformation	39
Problems	41
2. General Electromagnetic Fields	43
2.1 General Transverse Magnetic-Field Expansion	43
2.2 Third-Order Differential Equation of Motion	51
2.3 Periodic Wiggler Magnets	57
2.3.1 Wiggler Field Configuration	57
2.3.2 Focusing in a Wiggler Magnet	61
2.3.3 Hard-Edge Model of Wiggler Magnets	64
2.4 Superconducting Magnet	66
Problems	71
3. Dynamics of Coupled Motion	73
3.1 Conjugate Trajectories	73
3.2 Particle Motion in a Solenoidal Field	75
3.3 Transverse Coupled Oscillations	80
3.3.1 Equations of Motion in Coupling Systems	80
3.3.2 Coupled Beam Dynamics in Skew Quadrupoles	80
3.3.3 Equations of Motion in a Solenoid Magnet	82
3.3.4 Transformation Matrix for a Solenoid Magnet	83

3.3.5	Betatron Functions for Coupled Motion	86
	Problems	92
4.	Higher-Order Perturbations	93
4.1	Kinematic Perturbation Terms	93
4.2	Control of the Central Beam Path	95
4.3	Dipole Field Errors and Dispersion Function	102
4.4	Dispersion Function in Higher Order	105
4.4.1	Chromaticity in Higher Approximation	107
4.4.2	Nonlinear Chromaticity	110
4.5	Perturbation Methods in Beam Dynamics	114
4.5.1	Periodic Distribution of Statistical Perturbations	115
4.5.2	Statistical Methods to Evaluate Perturbations	121
	Problems	126
5.	Hamiltonian Nonlinear Beam Dynamics	127
5.1	Higher-Order Beam Dynamics	127
5.1.1	Multipole Errors	127
5.1.2	Nonlinear Matrix Formalism	131
5.2	Aberrations	136
5.2.1	Geometric Aberrations	137
5.2.2	Filamentation of Phase Space	143
5.2.3	Chromatic Aberrations	147
5.2.4	Particle Tracking	149
5.3	Hamiltonian Perturbation Theory	152
5.3.1	Tune Shift in Higher Order	158
	Problems	160
6.	Charged Particle Acceleration	163
6.1	Accelerating Fields in Resonant rf Cavities	163
6.1.1	Wave Equation	164
6.1.2	Waveguide Modes	165
6.1.3	rf Cavities	170
6.1.4	Cavity Losses and Shunt Impedance	175
6.1.5	Determination of rf Parameters	179
6.2	Beam-Cavity Interaction	181
6.2.1	Coupling Between rf Field and Particles	181
6.2.2	Beam Loading and rf System	187
6.2.3	Higher-Order Mode Losses in an rf Cavity	192
6.2.4	Beam Loading in Circular Accelerators	197
6.3	Higher-Order Phase Focusing	208
6.3.1	Path Length in Higher Order	208
6.3.2	Higher-Order Phase Space Motion	210
6.3.3	Stability Criteria	214
6.4	FODO Lattice and Acceleration	220

6.4.1	Transverse Beam Dynamics and Acceleration	222
6.4.2	Adiabatic Damping	225
Problems		227
7.	Synchrotron Radiation	229
7.1	Theory of Synchrotron Radiation	229
7.1.1	Radiation Field	229
7.2	Synchrotron Radiation Power and Energy Loss	236
7.3	Spatial Distribution of Synchrotron Radiation	241
7.4	Synchrotron Radiation Spectrum	245
7.4.1	Radiation Field in the Frequency Domain	246
7.4.2	Spectral Distribution in Space and Polarization . .	251
7.4.3	Angle-Integrated Spectrum	260
Problems		267
8.	Hamiltonian Many-Particle Systems	269
8.1	The Vlasov Equation	269
8.1.1	Betatron Oscillations and Perturbations	275
8.1.2	Damping	277
8.2	Damping of Oscillations in Electron Accelerators	279
8.2.1	Damping of Synchrotron Oscillations	279
8.2.2	Damping of Vertical Betatron Oscillations	285
8.2.3	Robinson's Damping Criterion	287
8.2.4	Damping of Horizontal Betatron Oscillations	290
8.3	The Fokker-Planck Equation	291
8.3.1	Stationary Solution of the Fokker-Planck Equation	294
8.3.2	Particle Distribution Within a Finite Aperture . .	298
8.3.3	Particle Distribution in the Absence of Damping .	301
Problems		302
9.	Particle Beam Parameters	305
9.1	Particle Distribution in Phase Space	305
9.1.1	Diffusion Coefficient and Synchrotron Radiation .	305
9.1.2	Quantum Excitation of Beam Emittance	308
9.1.3	Horizontal Equilibrium Beam Emittance	308
9.1.4	Vertical Equilibrium Beam Emittance	309
9.2	Equilibrium Energy Spread and Bunch Length	311
9.3	Phase-Space Manipulation	313
9.3.1	Exchange of Transverse Phase-Space Parameters .	313
9.3.2	Exchange of Longitudinal Phase-Space Parameters	314
9.4	Polarization of Particle Beam	320
Problems		323
10.	Collective Phenomena	325
10.1	Statistical Effects	325

10.1.1	Schottky Noise	326
10.1.2	Stochastic Cooling	328
10.1.3	Touschek Effect	328
10.1.4	Intra-Beam Scattering	330
10.2	Collective Self Fields	332
10.2.1	Transverse Self Fields	332
10.2.2	Fields from Image Charges	334
10.2.3	Space-Charge Effects	338
10.2.4	Longitudinal Space-Charge Field	343
10.3	Beam-Current Spectrum	345
10.4	Wake Fields and Impedance	350
10.4.1	Definitions of Wake Field and Impedance	353
10.4.2	Impedances in an Accelerator Environment	361
10.5	Coasting-Beam Instabilities	368
10.5.1	Negative-Mass Instability	368
10.5.2	Dispersion Relation	372
10.5.3	Landau Damping	378
10.5.4	Transverse Coasting-Beam Instability	380
10.6	Longitudinal Single-Bunch Effects	382
10.6.1	Potential-Well Distortion	382
10.7	Transverse Single-Bunch Instabilities	390
10.7.1	Beam Break-Up in Linear Accelerators	390
10.7.2	Fast Head-Tail Effect	392
10.7.3	Head-Tail Instability	397
10.8	Multi-Bunch Instabilities	399
	Problems	404
11.	Insertion Device Radiation	406
11.1	Particle Dynamics in an Undulator	407
11.2	Undulator Radiation	409
11.3	Undulator Radiation Distribution	412
11.4	Elliptical Polarization	429
	Problems	434
	Appendix	435
	References	445
	Suggested Reading	453
	Author Index	461
	Subject Index	465
