| 3.1      | The Ultra High Vacuum recipient . . . . .                                                | 25        |
| 3.2      | The molecular beam apparatus . . . . .                                                   | 27        |
| 3.3      | The ion beam source . . . . .                                                            | 27        |
| 3.4      | Tunnel detectors . . . . .                                                               | 29        |
| 3.4.1    | Metal-insulator-metal tunnel detector (MIM) . . . . .                                    | 29        |
| 3.4.2    | The new stepped metal-insulator-semiconductor<br>tunnel detector (stepped-MIS) . . . . . | 30        |
| <b>4</b> | <b>Measurements, results and discussion</b>                                              | <b>33</b> |
| 4.1      | Molecular beam . . . . .                                                                 | 33        |
| 4.1.1    | Translational energy of the particles . . . . .                                          | 33        |
| 4.1.2    | Particle numbers of the molecular beam . . . . .                                         | 36        |
| 4.2      | Ion beam characteristics . . . . .                                                       | 42        |
| 4.3      | Ion migration in anodic oxide films after potentiostatic formation . . . . .             | 43        |
| 4.3.1    | Introduction . . . . .                                                                   | 43        |
| 4.3.2    | Experimental . . . . .                                                                   | 46        |
| 4.3.3    | Results . . . . .                                                                        | 49        |
| 4.3.4    | Discussion . . . . .                                                                     | 56        |
| 4.3.5    | Conclusion . . . . .                                                                     | 64        |
| 4.3.6    | Appendix . . . . .                                                                       | 65        |
| 4.4      | Preparation and properties of thin amorphous tantalum films . . . . .                    | 66        |
| 4.4.1    | Introduction . . . . .                                                                   | 66        |

|       |                                                                                                |     |
|-------|------------------------------------------------------------------------------------------------|-----|
| 4.4.2 | Experimental . . . . .                                                                         | 67  |
| 4.4.3 | Electrical resistivity of thin tantalum films . . . . .                                        | 76  |
| 4.4.4 | Conclusion . . . . .                                                                           | 81  |
| 4.5   | Thin tantalum films on crystalline silicon – a metallic glass . . . . .                        | 86  |
| 4.5.1 | Introduction . . . . .                                                                         | 86  |
| 4.5.2 | Experiment and Discussion . . . . .                                                            | 86  |
| 4.5.3 | Conclusion . . . . .                                                                           | 91  |
| 4.6   | Charge transport through thin amorphous TiO <sub>x</sub> and TaO <sub>x</sub> layers . . . . . | 92  |
| 4.6.1 | Introduction . . . . .                                                                         | 92  |
| 4.6.2 | Sample preparation . . . . .                                                                   | 93  |
| 4.6.3 | Internal photoemission . . . . .                                                               | 97  |
| 4.6.4 | Bias-induced charge transport . . . . .                                                        | 108 |
| 4.6.5 | Chemicurrents . . . . .                                                                        | 113 |
| 4.6.6 | Conclusion . . . . .                                                                           | 114 |
| 4.6.7 | Appendix . . . . .                                                                             | 116 |
| 4.7   | Photo-sensitive MIS sensors with stepped insulating layer . . . . .                            | 118 |
| 4.8   | Transport of excited holes through MIS sensors . . . . .                                       | 125 |
| 4.8.1 | Introduction . . . . .                                                                         | 125 |
| 4.8.2 | Experimental . . . . .                                                                         | 127 |
| 4.8.3 | Electronic sensor properties . . . . .                                                         | 129 |
| 4.8.4 | Capacitance voltage plots at different thicknesses . . . . .                                   | 135 |
| 4.8.5 | Theoretical description of internal photoemission . . . . .                                    | 137 |
| 4.8.6 | Experimental results . . . . .                                                                 | 141 |
| 4.8.7 | Conclusion . . . . .                                                                           | 157 |
| 4.8.8 | Mathematical Appendix . . . . .                                                                | 158 |
| 4.9   | Molecular reaction chemicurrent studies with MIS sensors . . . . .                             | 160 |
| 4.9.1 | Study of effusing molecular gases with MIS sensors . . . . .                                   | 160 |
| 4.9.2 | Direct dosage of excited species on a MIS sensor I . . . . .                                   | 162 |
| 4.9.3 | Direct dosage of excited species on a MIS sensor II . . . . .                                  | 165 |
| 4.9.4 | The origin of the chemicurrent signals . . . . .                                               | 166 |
| 4.9.5 | Time dependent trace of the chemicurrent signals . . . . .                                     | 175 |
| 4.9.6 | Indirect dosage of excited species on a MIS sensor . . . . .                                   | 179 |
| 4.9.7 | Effusion of deuterium and oxygen mixtures . . . . .                                            | 184 |

## 5 Summary and Outlook 187

## Bibliography 193

|                                                                                                  |            |
|--------------------------------------------------------------------------------------------------|------------|
| <b>6 Further experimental results planned for publication</b>                                    | <b>217</b> |
| 6.1 Temperature dependence of internal photoemission in MIM sensors                              | 217        |
| 6.2 Temperature dependence of internal photoemission in MIS sensors                              | 222        |
| 6.3 About the stability of thin Al–AlO <sub>x</sub> and Ta–TaO <sub>x</sub> interfaces . . . . . | 225        |
| 6.3.1 Introduction . . . . .                                                                     | 225        |
| 6.3.2 Experimental . . . . .                                                                     | 225        |
| 6.3.3 Discussion . . . . .                                                                       | 226        |
| 6.3.4 Conclusion . . . . .                                                                       | 231        |
| <b>7 Appendix</b>                                                                                | <b>233</b> |
| 7.1 Refereed Papers published . . . . .                                                          | 233        |
| 7.2 Refereed Papers in preparation . . . . .                                                     | 234        |
| 7.3 Invited talk . . . . .                                                                       | 235        |
| 7.4 Poster and talks . . . . .                                                                   | 235        |
