

Contents

1	Introduction	1
1.1	Problems Addressed in the Thesis	3
	References	5
2	Theoretical Methods of Quantum Mechanics	7
2.1	Introduction	7
2.2	The Schrödinger Equation	8
2.3	The Born–Oppenheimer Approximation	9
2.4	Properties of the Wavefunction	10
2.5	Hartree–Fock Theory	11
2.6	Density Functional Theory	19
2.7	Molecular Mechanics Approach: a Way to Overcome the Complexity of Quantum Mechanics	24
	References	24
3	Degrees of Freedom in Polypeptides and Proteins	27
3.1	Introduction	27
3.2	Conformational Properties of Alanine and Glycine Chains	29
3.2.1	Determination of the Polypeptides Twisting Degrees of Freedom	29
3.2.2	Optimized Geometries of Alanine Polypeptides	29
3.2.3	Polypeptide Energy Dependence On the Dihedral Angle ω	30
3.2.4	Potential Energy Surface for Alanine Tripeptide	31
3.2.5	Potential Energy Surface for Alanine Hexapeptide with the Sheet and the Helix Secondary Structure	36
3.2.6	Comparison of Calculation Results with Experimental Data	38

3.3	Conformational Changes in Glycine Tri- and Hexa-Peptide	41
3.3.1	Optimized Geometries of Glycine Polypeptides	42
3.3.2	Potential Energy Surface for Glycine Tripeptide	42
3.3.3	Potential Energy Surface for Glycine Hexapeptide with the Sheet and the Helix Secondary Structure.	45
3.3.4	Comparison of Calculation Results with Experimental Data	48
	References	52
4	Partition Function of a Polypeptide	55
4.1	Introduction	55
4.2	Molecular Mechanics Potential	55
4.3	Hamiltonian of a Polypeptide Chain	56
4.4	Construction of the Partition Function	59
4.5	Thermodynamical Characteristics of a Polypeptide Chain.	64
	References	66
5	Phase Transitions in Polypeptides.	69
5.1	Introduction	69
5.2	Molecular Dynamics Simulations	71
5.3	α -Helix $\leftrightarrow$ Random Coil Phase Transition in Polyalanine.	72
5.3.1	Accuracy of the Molecular Mechanics Potential	72
5.3.2	Potential Energy Surface of Alanine Polypeptide	74
5.3.3	Internal Energy of Alanine Polypeptide	76
5.3.4	Heat Capacity of Alanine Polypeptide	80
5.3.5	Calculation of the Zimm–Bragg Parameters	83
5.3.6	Helicity of Alanine Polypeptides.	86
5.3.7	Correlation of Different Amino Acids in the Polypeptide	87
5.4	Phase Transitions in Polypeptides: Analysis of Energy Fluctuations	89
5.4.1	Fluctuations of Internal Energy and Heat Capacity	89
5.4.2	α -Helix $\leftrightarrow$ Random Coil Transition in Alanine Polypeptide	90
5.4.3	π -Helix $\leftrightarrow$ Random Coil Transition in Valine Polypeptide	91
5.4.4	π -Helix $\leftrightarrow$ Random Coil Transition in Leucine Polypeptide	95
5.4.5	Appendix: Parameters of MD Simulation.	96
	References	97

6	Folding of Proteins in Aqueous Environment	101
6.1	Introduction	101
6.2	Theoretical Methods	102
6.2.1	Partition Function of a Protein	102
6.2.2	Partition Function of a Protein in Water Environment	106
6.3	Results and Discussion	110
6.3.1	Heat Capacity of Staphylococcal Nuclease	110
6.3.2	Heat Capacity of Metmyoglobin	115
	References	117
7	Summary and Conclusions	119
	References	121
