I Spectroscopy of ^{195}Pt and ^{196}Au via transfer reactions and evidence of supersymmetry in atomic nuclei	11
1 Introduction	13
2 Experimental setup	15
2.1 The Lamb-Shift Source	15
2.2 The Q3D magnetic spectrograph	17
2.3 The Focal Plane detector	18
3 Transfer reaction formalism	19
3.1 Distorted-wave Born approximation	19
3.2 Optical Potentials	21
3.3 Polarised cross sections and analysing powers	22
4 Spectroscopy of ^{195}Pt and ^{196}Au via neutron pick-up reactions	24
4.1 The (p, d) transfer experiments to ^{195}Pt and ^{196}Au	25
4.2 The (d, t) transfer experiment to ^{195}Pt	27
4.3 The (d, t) transfer experiment to ^{196}Au	32
4.4 Comparison of the ^{196}Au with the ^{195}Pt data	36
5 Tentative J^π assignments of states in ^{196}Au	40
6 The (d, α) transfer experiment to ^{196}Au	46
6.1 The (d, α) data evaluation	46
7 Theory of the Interacting Boson Model	51
7.1 Interacting Boson Model-1	51
7.1.1 Dynamical symmetries of the IBM-1	52
7.2 Bose-Fermi symmetry and supersymmetry	54
7.3 The neutron-proton degree of freedom and the extended supersymmetry	55
7.3.1 The extended supersymmetry in the dynamical symmetry approach	56
7.4 Interacting Boson Fermion Fermion Model	58
7.5 Transfer operators for neutron pick-up reactions	58
8 Supersymmetric approximation of ^{195}Pt	61
8.1 Test of the third order term in the transfer operator T_{IBFA}^U	62
8.2 Comparison of the results calculated by the first order and third order transfer operator	64
8.3 New $U(6/12)$ classification of excited states in ^{195}Pt	67
9 Evidence for the supersymmetry in atomic nuclei	72
9.1 The third order transfer operator in case of the ^{196}Au supermultiplet	73
9.2 Classification of the excited states in ^{196}Au	75
10 IBFFM calculations for ^{196}Au	85
10.1 Determination of the IBM and IBFM parameters	85
10.2 Results of the IBFFM calculations for ^{196}Au	90
11 Results for ^{196}Au, summary and conclusions	95

II The new Stern-Gerlach ion source for the production of negative spin polarised hydrogen and deuterium beams	99
12 Introduction	101
13 The setup of the new injector	103
13.1 The atomic beam source	103
13.2 The ECR ioniser	107
13.2.1 The setup of the ECR	108
13.2.2 The beam analysing system	112
13.3 The Cs jet target	114
14 Results of beam measurements	115
15 Summary and outlook	120
A Compilation of all $(\vec{d}, t)^{195}\text{Pt}$ angular distributions	123
B Compilation of all $(\vec{d}, t)^{196}\text{Au}$ angular distributions	131
C Compilation of all $(\vec{d}, \alpha)^{196}\text{Au}$ angular distributions	145
D Reduction rules for the $U(6/12)$ and $U(6/12) \times U(6/4)$ supersymmetry	148
D.1 Reduction rules for the $U(6/12)$ supersymmetry	148
D.2 Reduction rules for the $U(6/12) \times U(6/4)$ supersymmetry	149
