

Table of Contents

Mechanistic Studies of Rearrangements and Exchange Reactions by Dynamic NMR Spectroscopy	
By Alois Steigel	1
Rotation of Molecules and Nuclear Spin Relaxation	
By Hans Wolfgang Spiess	55

Alois Steigel

Institut für Organische Chemie der Universität Düsseldorf, D-4000 Düsseldorf

Contents

1.	Introduction	2
2.	General Comments on Band Shape Analyses	3
2.1.	Experimental Requirements	3
2.2.	Mathematical Procedure	4
3.	Formulation of the Exchange Problem	6
4.	Classical Multi-Site Exchange Analysis	9
5.	Use of Prochiral CX ₂ Y Groups as Mechanistic Probes	14
6.	Permutational Approach to Polytopal Rearrangements	19
7.	Split Modes of Rearrangement	25
8.	Site Exchange in First-Order Spin Systems	29
8.1.	Sites Determined by Spin-Spin Couplings	29
8.2.	Sites Determined by Spin-Spin Couplings and Chemical Shifts	32
9.	Site Exchange in Non-First-Order Spin Systems	35
9.1.	Mutual Exchange in a Two-Spin System	35
9.2.	Mechanistic Studies of Non-First-Order Spin Systems	40
10.	Intermolecular Exchange Reactions	48
11.	References	51

Contents

Preface	59
1. Introduction	61
2. Nuclear Spin Hamilton Operators	64
2.1 Irreducible Tensor Operators	65
2.1.1. Definition	65
2.1.2. Construction of Irreducible Tensor Operators from Vector Operators	66
2.2. Nuclear Spin Operators	69
2.3. Nuclear Spin Hamilton Operators $\mathcal{H}_I$	70
2.3.1. General Form of $\mathcal{H}_I$	70
2.3.2. Magnetic Interactions	71
2.3.3. Electric Interactions	73
2.3.4. Relation Between Cartesian and Irreducible Tensors	74
3. NMR Spectra of Solids	78
3.1. Solid State Spectra Dominated by the Zeeman Interaction	79
3.1.1. Truncation of T_{lm}^λ	79
3.1.2. Angular Dependence of the Spectra	80
3.1.3. NMR Spectra of Single Crystals	81
3.1.4. Powder Spectra	82
3.1.5. Partially Ordered Solids	85
3.2. Solid State Spectra in the Presence of Strong Quadrupole Coupling	87
3.2.1. Spectra for Nuclei with $I > 1/2$	88
3.2.2. Dipolar Coupling of a Spin $I = 1/2$ with a Spin $S > 1/2$	89
4. Molecular Motions	91
4.1. Rotational Jumps in Solids	93
4.1.1. Calculation of the Line Shape	93
4.1.2. Numerical Calculation of $F(\omega)$	96
4.1.3. Line Shape for an Octahedron	99
4.1.4. Line Shapes for Noncubic Systems	102
4.2. Hindered Rotations in Liquids, Relaxation	103

4.2.1.	Classification of Relaxation Mechanisms	105
4.2.2.	Time Dependent $R_{lm}^\lambda(t)$	107
4.2.2.1.	Single Spin Species I	107
4.2.2.2.	Unlike Spins I and S	119
4.2.3.	Time Dependent $T_{lm}^\lambda(t)$	123
4.2.3.1.	Scalar Relaxation I, S	123
4.2.3.2.	Spin-Rotation Interaction	124
4.2.4.	Time Correlation Functions and Spectral Densities	128
4.2.4.1.	Anisotropic Rotations Within the Diffusion Model	128
4.2.4.2.	Relation Between the Correlation Times τ_I and τ_J	135
4.2.4.3.	Extended Diffusion Model	136
4.2.4.4.	Other Models for Rotation in Liquids	139
5.	Coupling Tensors	140
5.1.	Experimental Determination of Coupling Tensors	141
5.1.1.	Survey of Experimental Methods	141
5.1.2.	Solid State NMR	142
5.1.2.1.	Measurement of $\vec{\sigma}$ Tensors	143
5.1.2.2.	Structural Information from Dipole-Dipole Coupling	147
5.2.	Theory of Coupling Tensors	149
5.2.1.	Comparison of Couplings	150
5.2.1.1.	Direct Couplings	150
5.2.1.2.	Indirect Couplings	151
5.2.2.	Magnetic Shielding and Spin-Rotation Interaction	154
5.2.3.	Anisotropic J -Coupling	157
6.	Experimental Examples	158
6.1.	Shielding Tensors $\vec{\sigma}$	158
6.1.1.	^1H Shielding Tensors	158
6.1.1.1.	Susceptibility Correlation	160
6.1.2.	^{13}C and ^{15}N Shielding Tensors	162
6.1.2.1.	Experimental Values for ^{13}C	162
6.1.2.2.	Experimental Values for ^{15}N	165
6.1.2.3.	Theoretical Explanation	166
6.1.3.	Shielding Tensors of Other Nuclei	168
6.2.	Rotational Jumps in Solids	169
6.3.	Spin-Lattice Relaxation in Liquids	177
6.3.1.	Separation of the Various Contributions to the Total Relaxation Rate	178
6.3.1.1.	Nuclear Overhauser Effect, Separation for $\lambda = D$	179
6.3.1.2.	Field Dependent Studies, Separation for $\lambda = CS, J$	180
6.3.1.3.	^{13}C Relaxation in Acetone, $\lambda = D, CS, SR$	182
6.3.2.	Relaxation through Dipole-Dipole and Quadrupole Coupling	183
6.3.2.1.	Intramolecular Contributions	184
6.3.2.2.	Intermolecular Dipole-Dipole Coupling	188
6.3.3.	Anisotropic Motion of Planar Molecules	189

6.3.4.	Internal Rotation of Methyl Groups	193
6.4.	Conclusion	197
7.	Appendix	199
A.	Dipole-Dipole Coupling	199
B.	Relation Between $\rho_{ab}^{(l)}$ and ρ_{lm}	200
C.	Wigner Rotation Matrices	202
D.	Factors of Proportionality a_{lF}	205
	References	207
