## Invited Paper

|                                                                                                  |   |
|--------------------------------------------------------------------------------------------------|---|
| Real Face Communication in a Virtual World<br><i>W.-S. Lee, E. Lee, and N. Magnenat Thalmann</i> | 1 |
|--------------------------------------------------------------------------------------------------|---|

## Virtual Reality (1)

|                                                                                                                    |    |
|--------------------------------------------------------------------------------------------------------------------|----|
| Animated Impostors for Real-Time Display of Numerous Virtual Humans<br><i>A. Aubel, R. Boulic, and D. Thalmann</i> | 14 |
| Can We Define Virtual Reality ? The MRIC Model<br><i>D. Verna and A. Grumbach</i>                                  | 29 |
| Distortion in Distributed Virtual Environments<br><i>M.D. Ryan and P.M. Sharkey</i>                                | 42 |
| VRML Based Behaviour Database Editor<br><i>J.F. Richardson</i>                                                     | 49 |

## Virtual Reality (2)

|                                                                                                                                                            |    |
|------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| The Scan&Track Virtual Environment<br><i>S.K. Semwal and J. Ohya</i>                                                                                       | 63 |
| CyberGlass: Vision-Based VRML2 Navigator<br><i>C. Numaoka</i>                                                                                              | 81 |
| Work Task Analysis and Selection of Interaction Devices<br>in Virtual Environments<br><i>T. Flaig</i>                                                      | 88 |
| Effect of Stereoscopic Viewing on Human Tracking Performance<br>in Dynamic Virtual Environments<br><i>P. Richard, P. Hareux, P. Coiffet, and G. Burdea</i> | 97 |

## **Virtual Reality (3)**

|                                                                                                                                   |     |
|-----------------------------------------------------------------------------------------------------------------------------------|-----|
| Interactive Movie: A Virtual World with Narratives<br><i>R. Nakatsu, N. Tosa, and T. Ochi</i>                                     | 107 |
| Real-Image-Based Virtual Studio<br><i>J.I. Park and S. Inoue</i>                                                                  | 117 |
| Pop-Out Videos<br><i>G.U. Carraro, J.T. Edmark, and J.R. Ensor</i>                                                                | 123 |
| Color Segmentation and Color Correction Using Lighting<br>and White Balance Shifts<br><i>P. Gerard, C.B. Philips, and R. Jain</i> | 129 |

## **Invited Paper**

|                                                                               |     |
|-------------------------------------------------------------------------------|-----|
| Designing Emergence in Animated Artificial Life Worlds<br><i>J. Ventrella</i> | 143 |
|-------------------------------------------------------------------------------|-----|

## **Artificial Life**

|                                                                                                                            |     |
|----------------------------------------------------------------------------------------------------------------------------|-----|
| ALife Meets the Web: Lessons Learned<br><i>L. Pagliarini, A. Dolan, F. Menczer, and H.H. Lund</i>                          | 156 |
| Information Flocking: Data Visualisation in Virtual Worlds<br>Using Emergent Behaviours<br><i>G. Proctor and C. Winter</i> | 168 |
| Nerve Garden: A Public Terrarium in Cyberspace<br><i>B. Damer, K. Marcelo, and F. Revi</i>                                 | 177 |
| A Two-Dimensional Virtual World to Explain<br>the Genetic Code Structure ?<br><i>J.L. Tyran</i>                            | 186 |

## Multi-Agent

|                                                                                                                                                                                               |     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Grounding Agents in EMud Artificial Worlds<br><i>A. Robert, F. Chantemargue, and M. Courant</i>                                                                                               | 193 |
| Towards Virtual Experiment Laboratories: How Multi-Agent Simulations<br>Can Cope with Multiple Scales of Analysis and Viewpoints<br><i>D. Servat, E. Perrier, J.P. Treuil, and A. Drogoul</i> | 205 |
| A Model for the Evolution of Environments<br><i>C. Lattaud and C. Cuenca</i>                                                                                                                  | 218 |
| AReVi: A Virtual Reality Multi-Agent Platform<br><i>P. Reignier, F. Harrouet, S. Morvan, J. Tisseau, and T. Duval</i>                                                                         | 229 |

## Complexity

|                                                                                      |     |
|--------------------------------------------------------------------------------------|-----|
| Investigating the Complex with Virtual Soccer<br><i>I. Noda and I. Frank</i>         | 241 |
| Webots: Symbiosis Between Virtual and Real Mobile Robots<br><i>O. Michel</i>         | 254 |
| Vision Sensors on the Webots Simulator<br><i>Y.L. de Meneses and O. Michel</i>       | 264 |
| Grounding Virtual Worlds in Reality<br><i>G. Hutzler, B. Gortais, and A. Drogoul</i> | 274 |

## Applications (1)

|                                                                                                             |     |
|-------------------------------------------------------------------------------------------------------------|-----|
| Growing Virtual Communities in 3D Meeting Spaces<br><i>F. Kaplan, A. McIntyre, C. Numaoka, and S. Tajan</i> | 286 |
| A Mixed 2D/3D Interface for Music Spatialization<br><i>F. Pachet and O. Delerue</i>                         | 298 |
| Organizing Information in 3D<br><i>D. Doegl and C. Cavallar</i>                                             | 308 |
| Human Centered Virtual Interactive Image World for Image Retrieval<br><i>H. Kimoto</i>                      | 315 |

## Applications (2)

|                                                                                                                                                                                                                                         |     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Virtual Great Barrier Reef: A Theoretical Approach Towards an Evolving, Interactive VR Environment Using a Distributed DOME and CAVE System<br><i>S.T. Refsland, T. Ojika, T. Defanti, A. Johnson, J. Leigh, C. Loeffler, and X. Tu</i> | 323 |
