

Contents

<i>Preface</i>	<i>XIII</i>
Effect of peripheral corticotrophin-releasing factors on febrile responses <i>N. G. N. Milton</i>	<i>01</i>
Fever induction by a cytokine network in guinea pigs: The roles of tumour necrosis factor and interleukin-6 <i>J. Roth, M. Bock, J. L. McClellan, M. J. Kluger and E. Zeisberger</i>	<i>11</i>
Cytokines in endotoxin tolerance <i>E. Zeisberger, K. E. Cooper, M. J. Kluger, J. L. McClellan and J. Roth</i>	<i>17</i>
Effects of immunomodulators and protease inhibitors on fever <i>P. P. Murzenok and V. N. Gourine</i>	<i>23</i>
Endogenous steroids limit the magnitude of febrile responses <i>J. Davidson</i>	<i>29</i>
The role of heat shock proteins (HSPs) and interleukin-1 interaction in suppression of fever <i>M. Kosaka, J. M. Lee, G. J. Yang, T. Matsumoto, K. Tsuchiya, N. Ohwatari and M. Shimazu</i>	<i>35</i>
Body temperature elevation <i>per se</i> induces the late phase syndrome <i>A. A. Romanovsky and C. M. Blatteis</i>	<i>41</i>
The absence of fever in rat malaria is associated with increased turnover of 5-hydroxytryptamine in the brain <i>M. J. Dascombe and J. Y. Sidara</i>	<i>47</i>
Prostaglandins and the acute phase immune response <i>D. Rotondo</i>	<i>53</i>
Pyrogenic immunomodulator stimulation of a novel thymic corticotrophin releasing factor <i>in vitro</i> <i>N. G. N. Milton, E. Swanton and E. W. Hillhouse</i>	<i>59</i>
Apparent dissociation between lipopolysaccharide-induced intrapreoptic release of prostaglandin E ₂ and fever in guinea pigs <i>M. Szekély, E. Sehic, V. Menon and C. M. Blatteis</i>	<i>65</i>
Thermoregulatory responses of rabbits to combined heat exposure, pyrogen and dehydration <i>C. M. Blatteis, A. L. Ungar and R. B. Howell</i>	<i>71</i>
Fever and the <i>Organum vasculosum laminae terminalis</i> : Another look <i>W. S. Hunter, E. Sehic and C. M. Blatteis</i>	<i>75</i>

Lipopolysaccharide (LPS)-induced <i>fos</i> expression in the brains of febrile rats <i>A. Oladehin, J. A. Barriga-Briceno and C. M. Blatteis</i>	81
Analysis of body temperature and blood protein in hypothermic syrian hamsters and rats <i>N. Ohwatari, M. Yamauchi, M. Shimazu, T. Matsumoto, K. Pleschka and M. Kosaka</i> . . .	87
Neurophysiology of thermoregulation: Role of hypothalamic neuronal networks <i>J. A. Boulant</i>	93
Effect of 5-HT receptor agonists or antagonists on hypothalamic 5-HT release or colonic temperature in rats <i>M. T. Lin and H. J. Liu</i>	103
Temperature sensitivity of rat spinal cord neurons recorded <i>in vitro</i> <i>H. A. Schmid, U. Pehl and E. Simon</i>	109
The effect of ambient temperature on the modulation of thermoregulatory mechanisms by selective opioid peptides <i>C. M. Handler, T. C. Piliero, E. B. Geller and M. W. Adler</i>	115
Regulation of body temperature: Involvement of opioid and hypothalamic GABA <i>S. Ghosh and M. K. Poddar</i>	121
Bilateral difference in tympanic temperatures reflects that in brain temperature <i>T. Ogawa, J. Sugeno, N. Ohnishi, K. Imai, T. Umeyama, M. Nishida, Y. Kandori and A. Ishizuka</i>	127
Temperature interhemispheric brain asymmetry as a sign of functional activity <i>I. K. Yaitchikov and V. S. Gurevitch</i>	133
Cerebral and related temperatures in normothermic subjects <i>Z. Mariak, J. Lewko, M. Jadeszko and H. Dudek</i>	139
Non-thermometric means of assessing changes of brainstem temperature: The question of selective brain cooling in humans <i>T. Langer, B. Nielsen and C. Jessen</i>	145
Effects of selective α -adrenergic blockade on control of human skin blood flow during exercise <i>W. L. Kenney</i>	151
Acclimation to 3 different climates with the same wet bulb globe temperature <i>B. Griefahn and P. Schwarzenau</i>	159
Sensible heat loss after systemic anticholinergic treatment <i>M. A. Kolka, L. A. Stephenson and R. R. Gonzalez</i>	165
Neuropeptide-Y (NPY) reduces cutaneous microcirculatory blood flow and increases total blood flow in the rat tail <i>M. E. Heath and J. R. Thomas</i>	171

Effect of pretreatment with delta-9-tetrahydrocannabinol on the ability of certain cannabimimetic agents to induce hypothermia in mice <i>R. G. Pertwee and L. A. Stevenson</i>	177
Central motor command affects the sweating activity during exercise <i>N. Ohnishi, T. Ogawa, J. Sugeno, K. Natsume, Y. Yamashita, R. Imamura and K. Imai</i> .	183
Selective brain cooling in the horse during exercise <i>F. F. McConaghy, J. R. S. Hales and D. R. Hodgson</i>	189
Skin blood flow during severe heat stress: Regional variations and failure to maintain maximal levels <i>J. R. S. Hales, B. Nielsen and M. Yanase</i>	195
Heat transfer via the blood <i>J. Werner and H. Brinck</i>	201
Fall in body core temperature during the previous heat exposure time in rats after subjection to heat loads at a fixed time daily <i>O. Shido, S. Sakurada and T. Nagasaka</i>	207
Treatment of immersion hypothermia by forced-air warming <i>G. G. Giesbrecht, M. Schroeder and G. K. Bristow</i>	213
Factorial effects on contact cooling <i>F. Chen, H. Nilsson and I. Holmér</i>	219
Convective and metabolic heat in human fingers <i>M. B. Ducharme and P. Tikuisis</i>	223
From foetus to neonate: Implications for the ontogeny of thermoregulation <i>H. Laburn, D. Mitchell and K. Goelst</i>	229
Effects of several factors on the enlargement of brown adipose tissue <i>H. Yamashita, T. Ookawara, T. Kizaki, M. Yamamoto, Y. Ohira, T. Wakatsuki, Y. Sato and H. Ohno</i>	241
Thermal preference behaviour following β_3 -agonist stimulation <i>H. J. Carlisle, S. Rothberg and M. J. Stock</i>	247
Sympathetic tone and noradrenaline responsiveness of brown adipocytes from rats with high levels of sexual steroids <i>M. Puerta</i>	253
The tail of the rat in temperature regulation: effect of angiotensin II <i>M. J. Fregly, N. E. Rowland and J. R. Cade</i>	261
Selective vulnerability of rat hippocampus in heat stress <i>H. S. Sharma, J. Westman, F. Nyberg, C. Zimmer, J. Cervós-Navarro and P. K. Dey</i>	267

Development of temperature regulation in precocial chicks: Patterns in shorebirds and ducks <i>G. H. Visser and R. E. Ricklefs</i>	273
Central venous pressure and cardiovascular responses to hyperthermia <i>T. Morimoto, A. Takamata and H. Nose</i>	279
Effects of bright and dim light intensities during daytime upon circadian rhythm of core temperature in man <i>H. Tokura, M. Yutani, T. Morita and M. Murakami</i>	285
Long term heat acclimation: Acquired peripheral cardiovascular adaptations and their stability under multifactorial stressors <i>M. Horowitz, W. Haddad, M. Shochina and U. Meiri</i>	291
Effects of solar radiation and feed quality on heart rate and heat balance parameters in cattle <i>A. Brosh, S. Fennell, D. Wright, G. Beneke and B. Young</i>	297
Cytological changes in brown adipose tissue of lean and obese mice: Acclimation to mild cold with and without a warm refuge <i>D. Challoner, S. McBennett, J. F. Andrews and M. E. Jakobson</i>	303
Manipulation of brown adipose tissue development in neonatal and postnatal lambs <i>M. E. Symonds, J. A. Bird, L. Clarke, C. J. Darby, J. J. Gate and M. A. Lomax</i>	309
Resting muscle: A source of thermogenesis controlled by vasomodulators <i>M. G. Clark, E. Q. Colquhoun, K. A. Dora, S. Rattigan, T. P. D. Eldershaw, J. L. Hall, A. Matthias and J.-M. Ye</i>	315
Thyroid status modulates hypothalamic thermosensitivity, vasopressin and corticosteroid secretion in rabbits <i>R. Keil, W. Riedel and E. Simon</i>	321
Role of prolactin in brown adipose tissue thermogenic activity <i>T. Yahata and A. Kuroshima</i>	327
Biology of adaptive heat production: Studies on brown adipose tissue <i>P. Trayhurn</i>	333
Brown adipose tissue: Receptors and recruitment <i>J. Nedergaard and B. Cannon</i>	345
High-energy food supplement, energy substrate mobilization and heat balance in coldexposed humans <i>A. L. Vallerand and I. Jacobs</i>	351
Emerging themes in thermoregulation and fever <i>K. E. Cooper and W. L. Veale</i>	357
