

Contents

CHAPTER 1

INTRODUCTION 1

- 1.1 Historical Milestones, 1
- 1.2 Scope of the Monograph, 5
- 1.3 General Scheme of Notation and List of Symbols, 6

CHAPTER 2

FIELD EQUATIONS OF MULTIPHASE MIXTURES 13

- 2.1 Choice of the Averaging Approach, 13
- 2.2 Basic Kinematical Concepts and Local Macroscopic Field Equations, 16
- 2.3 The Volume Averaging Procedure and General Phasic Equation of Balance, 19
- 2.4 Basic Conservation and Balance Equations of Multiphase Mixtures, 22
 - 2.4.1 Kinematics of the Superimposed Continua
 - 2.4.2 Balance of Mass
 - 2.4.3 Balance of Linear Momentum
 - 2.4.4 Balance of Angular Momentum
 - 2.4.5 Balance of Energy
 - 2.4.6 Entropy Inequality
 - 2.4.7 Proof of the Existence of Phasic Stress Tensor
- 2.5 Properties of The Averaged Equations, 33
- 2.6 Concluding Remarks, 35

CHAPTER 3

THE MATERIAL DEFORMATION POSTULATE AND FIELD EQUATIONS OF MULTIPHASE MIXTURES WITH STRUCTURE 37

- 3.1 The Basic Material Deformation Postulate, 37

- 3.2 Additional Transport Equations in the Theory of Multiphase Mixtures, 41
 - 3.2.1 Balance Equation for the Equilibrated Inertia
 - 3.2.2 Balance Equation for the Equilibrated Moments
- 3.3 Momentum and Energy Sources, 44
- 3.4 Alternate Forms of Balance Equations, 47
 - 3.4.1 Phasic Balance Equations
 - 3.4.2 Mixture Balance Equations
- 3.5 Concluding Remarks, 52

CHAPTER 4

RESTRICTIONS IMPOSED ON FIELD EQUATIONS BY THE PRINCIPLE OF MATERIAL FRAME-INDIFFERENCE 55

- 4.1 Events, Frames, Change of Frame, and Frame-Indifference, 55
- 4.2 The Principle of Material Frame-Indifference for Multiphase Mixtures, 57
- 4.3 Transformation Properties of Multiphase Variables, 59
- 4.4 Remarks on the Closure of Conservation and Balance Equations by the Constitutive Relations, 65
- 4.5 Concluding Remarks, 66

CHAPTER 5

SIMPLIFICATION OF THE THEORY OF STRUCTURED MULTIPHASE MIXTURES 69

- 5.1 Further Restrictions on the Material Deformation Relative to the Center of Mass, 69
- 5.2 Balance Equations of Multiphase Mixtures with Rotation and Dilatation, 71
 - 5.2.1 Balance Equation for the Equilibrated Inertia
 - 5.2.2 Balance Equations for Equilibrated Moments
 - 5.2.3 The Energy Balance Equation
- 5.3 Balance Equations of Multiphase Mixtures with Dilatation, 75
- 5.4 Comparison of Results with Other Theories of Structured Multiphase Mixtures, 77
- 5.5 Concluding Remarks, 83

CHAPTER 6

CONCEPTS AND PRINCIPLES OF CONSTITUTIVE THEORY 85

- 6.1 Purpose of the Chapter, 85
- 6.2 Principle of Determinism, 85
- 6.3 Principle of Local Action, 89
- 6.4 Principle of Smooth and Local Memory, 91
- 6.5 Principles of Local Action and Smooth and Local Memory Combined, 92
- 6.6 Principle of Material Frame-Indifference, 93
 - 6.6.1 Rigid Translation of the Spatial Frame
 - 6.6.2 Shift of Time
 - 6.6.3 Rigid Rotation of the Spatial Frame
- 6.7 Material Isomorphisms, 98
- 6.8 Reduced Constitutive Equations and Isotropic Multiphase Mixtures, 104
- 6.9 Solidlike and Fluidlike Mixtures, 111
 - 6.9.1 Solidlike Mixtures
 - 6.9.2 Fluidlike Mixtures
 - 6.9.3 Mixtures of Isotropic Solids and Fluids
- 6.10 Combined Principles of Local Action and Smooth and Local Memory for a Mixture of Isotropic Solids and Fluids, 116
- 6.11 The Role of Entropy Inequality or Axiom of Dissipation in the Constitutive Theory, 117
- 6.12 Internal Constraints, 117
 - 6.12.1 General Considerations
 - 6.12.2 Previous Works
 - 6.12.3 Restrictions Imposed on Internal Constraints Relations by No Entropy and Work Production Principles
 - 6.12.4 Special Results
 - 6.12.5 Discussion
- 6.13 Principle of Phase Separation, 126
- 6.14 Concluding Remarks, 127

CHAPTER 7

CONSTITUTIVE EQUATIONS 129

- 7.1 Purpose of the Chapter, 129

7.2	Balance Equations of Multiphase Mixtures with Rotation and Dilatation, 130
7.3	Balance Equations of Multiphase Mixtures with Dilatation, 134
7.4	Constitutive Equations for Mixtures of Isotropic Fluids, 136
7.5	Linearized Constitutive Equations for Mixtures of Isotropic Fluids, 144
7.6	Restrictions of Material Coefficients of Linearized Constitutive Equations without Phase Change, 151
7.7	Two-Phase Structured Models without Phase Change, 156
7.7.1	Summary of the Linearized Constitutive Equations
7.7.2	Two-Phase Modeling Equations
7.7.3	Examples of Two-Phase Models
7.7.3.1	Saturated and Concentrated Mixtures with Incompressible Phases and Negligible Inertial Effects
7.7.3.2	Saturated and Dilute Mixtures with Incompressible Phases and Negligible Inertial Effects
7.7.3.3	Saturated and Dilute Mixtures with Compressible Phases and the Rayleigh-Type Bubble Equation
7.8	Discussion of Results, 168
7.9	Application of the Theory to Shearing Flow of a Fluid-Saturated Granular Material, 175
7.10	Concluding Remarks, 180

CHAPTER 8

MIXTURES WITH ROTATION AND DILATATION 183

8.1	Purpose of the Chapter, 183
8.2	Constitutive Equations for Mixtures of Isotropic Fluids, 183
8.3	Linearized Constitutive Equations with Rotation and Dilatation, 186
8.4	Two-Phase Modeling Equations with Rotational and Dilatational Effects, 192
8.5	Nonlinear Constitutive Equations, 195
8.6	Concluding Remarks, 200

BIBLIOGRAPHY 201

APPENDIX

THEOREMS OF ALGEBRA, GEOMETRY
AND CALCULUS 209
