<b>1</b>	<b>Introduction to silicon technology</b>	<b>11</b>
1.1	Literature	12
<b>2</b>	<b>Reaction principles of silicon</b>	<b>13</b>
2.1	Literature	16
<b>3</b>	<b>Silicon</b>	<b>17</b>
3.1	Properties and occurrence of silicon	17
3.2	Silicon as a raw material for solar cells	19
3.3	From quartz sand to silane	22
3.4	Literature	24
<b>4</b>	<b>Silicon-based raw materials</b>	<b>25</b>
4.1	Hydrosilanes (silanes) as raw material	26
4.2	Chlorosilanes	28
4.2.1	The Müller-Rochow synthesis of chlorosilanes	29
4.2.2	Uses of chlorosilanes	30
4.3	Organosilicon compounds	30
4.3.1	Polysilazanes	32
4.3.2	Alkoxy and acetoxysilanes	33
4.4	Literature	37
<b>5</b>	<b>Chemo-technical basics</b>	<b>39</b>
5.1	Basics of glass chemistry	40
5.1.1	SiO <sub>2</sub> as glass and crystal	40
5.1.2	Enamel	43
5.1.3	Water glass	45
5.1.4	Colouring of glass	47
5.2	Surface finishing of glass with thin coatings	50
5.2.1	CVD	50
5.2.2	PVD	52
5.2.3	Thin metal layers	54
5.2.4	Thin dielectric layers	56
5.2.5	Coating with transparent, conductive oxides	58
5.3	Basics of chemical nanotechnology	60
5.3.1	Definition of nanotechnology	61

5.3.2	Nanoparticles in coating systems	65
5.3.3	Production of nanoparticles	67
5.3.4	Surface modification of nanoparticles	74
5.3.5	Characterisation of nanoparticles	77
5.3.6	Nanoparticles for coating materials	84
5.3.7	Toxicology of nanoparticles	101
5.4	Corrosion protection	102
5.4.1	Passive corrosion protection	103
5.4.2	Active cathodic corrosion protection	105
5.4.3	Zinc flake coatings	109
5.5	Basics of silicone chemistry	111
5.6	The sol-gel process	113
5.6.1	Network modifiers for flexibilising the inorganic network	119
5.6.2	Co-condensation of metal alkoxides into the Si-O-Si network	121
5.6.3	Functional organic network formers	127
5.7	Literature	128
<b>6</b>	<b>Surface effects</b>	<b>133</b>
6.1	Hydrophobic surfaces or the easy-to-clean effect	136
6.2	Lotus effect or superhydrophobic surfaces	140
6.3	Anti-fogging effect or hydrophilic surfaces	143
6.4	Superhydrophilic surfaces	145
6.5	Photocatalytic effects	148
6.6	Superhydrophilic versus superhydrophobic	151
6.7	Literature	152
<b>7</b>	<b>Coatings raw materials and their applications</b>	<b>155</b>
7.1	Acid-stabilised, solvent-borne silane hydrolysates	155
7.1.1	Sol-gel materials for high-temperature applications	157
7.1.2	Anti-fingerprint coatings	158
7.1.3	Corrosion protection for steel/stainless steel	163
7.1.4	Sealing of galvanised steel	165
7.1.5	Sealing of zinc sheet	166
7.1.6	Corrosion protection for aluminium and magnesium	168
7.1.7	Photocatalytic, self-cleaning coatings on polymers	171
7.1.8	Food-safe liner for aluminium containers	174
7.1.9	Heat-resistant, easy-to-clean coating	175
7.1.10	Infrared-absorbing coatings	176
7.1.11	Sealing of copper	177

7.1.12	Scratch-resistant coatings	178
7.1.13	Tribological coatings	181
7.1.14	Demoulding coatings	181
7.1.15	Easy-to-clean coating for ceramic rollers in high-temperature furnaces	185
7.1.16	Scale protection for steel	186
7.2	Water-borne modified silica sols	193
7.2.1	Durable hydrophilic coatings	193
7.2.2	Corrosion protection through water-borne zinc flake coatings	195
7.2.3	Active zinc coatings with heat resistance up to 500 °C	199
7.2.4	Water-borne active corrosion protection primer for chromatic paints and powder coatings	201
7.2.5	Epoxy-modified silica sols as additives for dispersions	205
7.3	Resins made by the precipitation emulsion process	205
7.3.1	High-solids methacrylic resins made by the precipitation process	209
7.3.2	Dual-cure materials based on high-solids methacrylic binders	213
7.3.3	Emulsions of precipitated silane condensates	214
7.3.4	Coatings on glass and porcelain	216
7.4	Nano-enamel	217
7.4.1	Alkaline water-borne silicate coatings for corrosion protection	218
7.4.2	Tarnish protection for stainless steel	219
7.4.3	Maximum chemical resistance with nano-enamel	220
7.4.4	Catalytic soot burn-off based on alkali-modified silicates	221
7.4.5	Nano-enamel as a surface designed for passive corrosion protection	224
7.4.6	Room-temperature-curing nano-enamel binders for paints	227
7.4.7	Fire-retardant primers, fillers and coatings based on nano-enamel	228
7.5	Self-crosslinking silanes: cross-silanes	232
7.5.1	Cross-silanes for sealing stone and concrete	234
7.5.2	Restoration of liquid and powder paints	237
7.5.3	Inorganic chromatic paints based on cross-silanes	238
7.5.4	Photocatalytic wall paints based on cross-silanes	240
7.5.5	Candle coating	241
7.5.6	Binders for natural substances and stone	242
7.6	Alkoxy-Si-n-s binders	245
7.6.1	Interference coatings based on Ti/Si	246
7.6.2	Anti-reflective coatings	248
7.6.3	Cathodic corrosion protection through metal-ceramic coatings based on TiO <sub>2</sub> /SiO <sub>2</sub> /Zn/Al	249

7.6.4	Cathodic corrosion protection provided by metal-ceramic coatings based on $\text{TiO}_2/\text{SiO}_2/\text{Mg}$	259
7.6.5	Weldable scale protection for hot forming based on $\text{TiO}_2/\text{SiO}_2/\text{Al}$ coatings	261
7.7	Urethane-functional silanised organic resins	265
7.7.1	Urethane- crosslinked U-grade re-Si-ns	266
7.7.2	Powder and liquid coatings based on silanised resins	273
7.7.3	Silanisation of natural substances	275
7.8	Phenoxylenes	276
7.8.1	Paint binders and polymers based on phenoxylenes	277
7.8.2	Electrocoating based on phenoxylenes	277
7.8.3	Natural active ingredient particles and coatings based on phenoxylenes	278
7.8.4	Corrosion protection coatings based on phenoxylenes	281
7.9	Literature	281
