

Contents

Contents.....	I
Figures	V
Tables	X
Abbreviations	XI
1. Introduction	1
1.1. Image based system biology	2
1.1.1. Label free imaging – phase contrast microscopy	2
1.1.2. Fluorescence-based cell identification	3
1.1.3. Gene expression based cell identification	4
1.1.4. Digital image formation	5
1.2. Bioimage data analysis	7
1.2.1. Image signal processing and evaluation	7
1.2.2. Statistical analysis of objects	15
1.3. Aims of this work	17
2. Material and Methods	19
2.1. Microscopes	19
2.1.1. MELC	19
2.1.2. LSM	22
2.1.3. LSFM	22
2.2. ST	24
2.3. Image analysis software and algorithms	24
2.3.1. Watershed segmentation - Cell Profiler	24
2.3.2. Seeded region growing	26
2.3.3. Random forest probability calculation – ilastik	27
2.3.4. Data analysis environment	28
3. Application and Results	31
3.1. Image analysis of LSM data	31
3.2. Device optimization of the MELC system	32
3.2.1. Camera	32
3.2.2. Light source	34
3.2.3. Optical components	35
3.2.4. Sample holding and washing box	37
3.3. Image preprocessing of MELC data	38
3.3.1. Registration	38

3.3.2. Illumination correction.....	39
3.3.3. All in focus projection.....	40
3.4. Image analysis of MELC data	42
3.4.1. Image segmentation	42
3.4.2. Cell type identification – phenotypic classification.....	44
3.4.3. Neighborhood Analysis.....	47
3.5. Spatial Transcriptomics data analysis	51
3.5.1. Preprocessing ST data	51
3.5.2. Data Integration.....	52
3.5.3. Dimensionality reduction and clustering.....	53
3.5.4. Gene set enrichment analysis.....	54
3.6. Added value of correlative MELC and ST analysis.....	55
3.7. LSFM image data analysis.....	58
4. Discussion and future prospects.....	66
4.1. Seeded region growing and DFT shape descriptors for analysis of microglia in LSM images.....	66
4.2. Enhanced MELC analysis workflow for spatially automated phenotypic classification and cellular communication investigation	67
4.3. Comprehensive workflow for object characterization and phenotypic identification in Spatial Transcriptomics.....	69
4.4. Improved object identification accuracy through FFT-based filtering for stripe artifact suppression in LSFM measurements.....	70
4.5. Standardized analysis pipelines for data integration of multiple complementary spatial technologies - augmenting access to information.....	70
4.6. Prospects for future multiplexing projects.....	71
5. Summary.....	73
6. Zusammenfassung.....	75
7. References	77
8. Appendix – Source codes.....	84
8.1. Source codes.....	84
8.1.1. SHADE – Fiji/ImageJ PlugIn	84
8.1.2. MELC Evaluation Toolbox – Fiji/ImageJ PlugIn	90
8.1.3. markerSpecifiedSearching – Fiji/ImageJ PlugIn	107
8.1.4. DFT Coefficient Calculation of object outlines – ImageJ Macro	113
8.1.5. MELC registration scripts – Python.....	116
8.1.6. MELC data integration and unsupervised clustering – R.....	130
8.1.7. MELC Neighborhood test and Randomization - Matlab	133
8.1.8. MELC Neighborhood Analysis – R	140

8.1.9. ST data integration and clustering analysis script – R.....	145
8.1.10. ST GSEA script – R.....	148
8.1.11. ST ssGSEA script – R.....	150
8.1.12. LSFM destriping script – Python.....	152
8.1.13. SNR calculation of stripy and destriped LSFM images.....	162
9. List of publications and author contribution.....	164
9.1. Publications as part of this thesis.....	164
9.2. Additional publication contribution.....	165
9.3. List of conference contributions.....	166
10. Acknowledgements.....	167
11. Finanzierungsquellen, Interessenkonflikte und Selbständigkeitserklärung.....	168
