Chapter I. Physical Examples

Introduction	1
<i>Part A. The Physical Models</i>	<i>2</i>
§1. Classical Fluids and the Navier-Stokes System	2
1. Introduction: Mechanical Origin	2
2. Corresponding Mathematical Problem	5
3. Linearisation. Stokes' Equations	7
4. Case of a Perfect Fluid. Euler's Equations	7
5. Case of Stationary Flows. Examples of Linear Problems	9
6. Non-Stationary Flows Leading to the Equations of Viscous Diffusion	15
7. Conduction of Heat. Linear Example in the Mechanics of Fluids	18
8. Example of Acoustic Propagation	23
9. Example with Boundary Conditions on Oblique Derivatives	25
Review	27
§2. Linear Elasticity	28
1. Introduction: Elasticity; Hyperelasticity	28
2. Linear (not Necessarily Isotropic) Elasticity	29
3. Isotropic Linear Elasticity (or Classical Elasticity)	32
4. Stationary Problems in Classical Elasticity	33
5. Dynamical Problems in Classical Elasticity	37
6. Problems of Thermal Diffusion. Classical Thermoelasticity	47
Review	51
§3. Linear Viscoelasticity	52
1. Introduction	52
2. Materials with Short Memory	53
3. Materials with Long Memory	53
4. Particular Case of Isotropic Media	54
5. Stationary Problems in Classical Viscoelasticity	59
Review	59
§4. Electromagnetism and Maxwell's Equations	59
1. Fundamental Equations of Electromagnetism	59
2. Macroscopic Equations: Electromagnetism in Continuous Media	65

3. Regularity of Simple and Double Layer Potentials	296
4. Newtonian Potential of a Distribution Without Compact Support	307
5. Some Physical Interpretations (in Mechanics and Electrostatics)	326
§4. Classical Theory of Dirichlet's Problem	328
1. Generalities on Dirichlet's Problem $P(\Omega, \varphi)$ in the Case Ω Bounded: Classical Solution, Examples, Outline of Perron's Method, Generalized Solutions, Regular Point of the Boundary, Barrier Function	328
2. Generalities on the Dirichlet Problem $P(\Omega, \varphi, f)$ and the Green's Function of Ω , a Bounded Open Set	341
3. Generalities on Dirichlet's Problem in an Unbounded Open Set	352
4. The Neumann Problem; Mixed Problem; Hopf's Maximum Principle; Examples	367
5. Solution by Simple and Double Layer Potentials: Fredholm's Integral Method	379
6. Sub-Harmonic Functions. Perron's Method	397
§5. Capacities*	407
1. Interior and Exterior Capacity Operators	407
2. Electrical Equilibrium; Coefficients of Capacitance	418
3. Capacity of a Part of an Open Set in $\mathbb{R}^n$	433
§6. Regularity*	457
1. Regularity of the Solutions of Dirichlet and Neumann Problems	457
2. Analytic Regularity and Trace on the Boundary of a Harmonic Function	472
3. Dirichlet Problem with Given Measures or Discontinuous Functions. Herglotz's Theorem	483
4. Neumann Problem with Given Measures	497
5. Dependence of Solutions of Dirichlet Problems as a Function of the Open Set: Hadamard's Formula	502
§7. Other Methods of Solution of the Dirichlet Problem*	507
1. Case of a Convex Open Set: Neumann's Integral Method	507
2. Alternating Procedure of Schwarz	515
3. Method of Separation of Variables. Harmonic Polynomials. Spherical Harmonic Function	523
4. Dirichlet's Method	542
5. Symmetry Methods and Method of Images	560
§8. Elliptic Equations of the Second Order*	568
1. The Divergence Form, Green's Formula	570
2. Different Concepts of Solutions, Boundary Value Problems, Transmission Conditions	576
3. General Results on the Regularity of Elliptic Problems of the Second Order	585

4. Results on Existence and Uniqueness of Solutions of Strictly Elliptic Boundary Value Problems of the Second Order on a Bounded Open Set	594
5. Harnack's Inequality and the Maximum Principle	607
6. Green's Functions	624
7. Helmholtz's Equation	640
Review of Chapter II	658
Bibliography	659
Table of Notations	667
Index	681
Contents of Volumes 2-6	715
