

Contents

1	Introduction	11
1.1	Scope of the Book	11
1.2	Historical Developments	12
1.3	Holographic Interferometry as a Measurement Tool	13
2	Optical Foundations of Holography	15
2.1	Light Waves	15
2.1.1	Solutions of the Wave Equation	15
2.1.2	Intensity	18
2.2	Interference of Light	19
2.2.1	Interference of Two Waves with Equal Frequency	19
2.2.2	Interference of Two Waves with Different Frequencies	20
2.2.3	Interference of Two Waves with Different Amplitudes	21
2.3	Coherence	22
2.3.1	Temporal Coherence	22
2.3.2	Spatial Coherence	24
2.4	Diffraction Theory	27
2.4.1	The Fresnel-Kirchhoff Diffraction Formula	27
2.4.2	Diffraction at a Transmittance	28
2.4.3	The Spherical Lens	29
2.4.4	Discrete Finite Fresnel-Transform	31
2.5	Speckles	31
2.5.1	Statistics of Speckle Intensity and Phase	32
2.5.2	Speckle Size	36
2.6	Holographic Recording and Reconstruction	38
2.6.1	Hologram Recording	38
2.6.2	Holographic Reconstruction of a Wave Field	42
2.6.3	Holographic Imaging Equations	45
2.6.4	Types of Holograms	48
2.7	Elements of the Holographic Setup	55
2.7.1	Laser	55
2.7.2	Recording Media	59
2.7.3	Optical Components	61
2.7.4	Beam Modulating Components	63
3	Holographic Interferometry	65
3.1	Generation of Holographic Interference Patterns	66
3.1.1	Recording and Reconstruction of a Double Exposure Holographic Interferogram	66
3.1.2	Recording and Reconstruction of a Real-Time Holographic Interferogram	68

3.1.3	Time Average Holography	70
3.1.4	Interference Phase Variation Due to Deformation	71
3.1.5	Interference Phase Variation Due to Refractive Index Variation	74
3.1.6	Computer Simulation of Holographic Interference Patterns	76
3.2	Variations of the Sensitivity Vectors	78
3.2.1	Optimization of the Holographic Arrangement	78
3.2.2	Two Reference Beam Holographic Interferometry	82
3.3	Fringe Localization	84
3.3.1	Fringe Formation with Diffusely Scattering Surfaces	84
3.3.2	Fringe Localization with Collimated Illumination	87
3.3.3	Fringe Localization with Spherical Wave Illumination	91
3.3.4	Fringe Localization with Phase Objects	92
3.3.5	Observer Projection Theorem	94
3.4	Holographic Interferometric Measurements	95
3.4.1	Qualitative Evaluation of Holographic Interferograms	95
3.4.2	Holographically Measurable Physical Quantities	96
3.4.3	Loading of the Objects	98
4	Quantitative Evaluation of the Interference Phase	101
4.1	Role of Interference Phase	101
4.1.1	Sign Ambiguity	102
4.1.2	Absolute Phase Problem	104
4.2	Disturbances of Holographic Interferograms	105
4.2.1	Varying Background Illumination	106
4.2.2	Electronic Noise	106
4.2.3	Speckle Decorrelation	107
4.2.4	Digitization and Quantization	108
4.2.5	Environmental Distortions	108
4.3	Fringe Skeletonizing	109
4.3.1	Pattern Preprocessing	110
4.3.2	Fringe Skeletonizing by Segmentation	111
4.3.3	Skeletonizing by Fringe Tracking	112
4.3.4	Other Fringe Skeletonizing Methods	114
4.3.5	Fringe Numbering and Integration	115
4.4	Temporal Heterodyning	116
4.4.1	Principle of Temporal Heterodyning	116
4.4.2	Technical Realization of Temporal Heterodyning	117
4.4.3	Errors of Temporal Heterodyning	119
4.4.4	Experimental Application of Temporal Heterodyning	121
4.5	Phase Sampling Evaluation	123
4.5.1	Phase Shifting and Phase Stepping	125
4.5.2	Solution of the Phase Sampling Equations with Known Phase Shifts	126
4.5.3	Solution of the Phase Sampling Equations with Unknown Phase Shifts	129
4.5.4	Application of Phase Shift Evaluation Methods	132
4.5.5	Discussion of Phase Shift Evaluation Methods	136
4.6	Fourier Transform Evaluation	138
4.6.1	Principle of the Fourier Transform Evaluation Method	138
4.6.2	Noise Reduction by Spatial Filtering	139
4.6.3	Spatial Filtering and Sign Ambiguity	143
4.6.4	Fourier Transform Evaluation of Phase Shifted Interferograms	145
4.6.5	Spatial Heterodyning	146

4.6.6	Spatial Synchronous Detection	149
4.7	Digital Holography	149
4.7.1	Principle of Digital Holography	150
4.7.2	Digital Holographic Interferometry	153
4.7.3	Application of Digital Holography	154
4.8	Dynamic Evaluation	158
4.8.1	Principles of Dynamic Evaluation	158
4.8.2	Dynamic Evaluation by a Scanning Reference Beam	160
4.9	Interference Phase Demodulation	161
4.9.1	Prerequisites for Interference Phase Demodulation	161
4.9.2	Path-Dependent Interference Phase Demodulation	162
4.9.3	Path-Independent Interference Phase Demodulation	164
4.9.4	Interference Phase Demodulation by Cellular Automata	166
4.9.5	Further Approaches to Interference Phase Demodulation	169
5	Processing of the Interference Phase	171
5.1	Displacement Determination	171
5.1.1	Displacement Determination with Known Reference Displacement	172
5.1.2	Displacement Determination with Unknown Reference Displacement	173
5.1.3	Elimination of Overall Displacement	175
5.1.4	Non-Vibration Isolated Objects	178
5.2	The Sensitivity Matrix	181
5.2.1	Determination of the Sensitivity Vectors	181
5.2.2	Correction of Perspective Distortion	182
5.2.3	Condition of the Sensitivity Matrix	184
5.3	Holographic Strain and Stress Analysis	186
5.3.1	Definition of Elastomechanical Parameters	186
5.3.2	Beams and Plates	189
5.3.3	Numerical Differentiation	192
5.3.4	Fringe Vector Theory	193
5.4	Hybrid Methods	195
5.4.1	Finite Element Methods and Holographic Interferometry	196
5.4.2	Boundary Element Methods and Holographic Interferometry	197
5.4.3	Fracture Mechanics	197
5.5	Vibration Analysis	198
5.5.1	Surface Vibrations	198
5.5.2	Stroboscopic and Real-Time Holographic Interferometry	200
5.5.3	Time Average Holographic Interferometry	201
5.5.4	Temporally Modulated Reference Wave	202
5.5.5	Numerical Analysis of Time Average Holograms	206
5.6	Holographic Contouring	207
5.6.1	Contouring by Wavelength Differences	208
5.6.2	Contouring by Refractive Index Variation	209
5.6.3	Contouring by Varied Illumination Direction	210
5.6.4	Contouring by Light-in-Flight recording	211
5.7	Measurement Range Extension	214
5.7.1	Two-Wavelength Holographic Interferometry	214
5.7.2	Holographic Moiré	216
5.7.3	Holographic Interferometry at Rotating Objects	217
5.7.4	Comparative Holographic Interferometry	221
5.7.5	Desensitized Holographic Interferometer	225

5.8	Refractive Index Fields in Transparent Media	226
5.8.1	Refraction of Phase Objects	226
5.8.2	Physical Quantities Affecting the Refractive Index Field	230
5.8.3	Two-Dimensional Refractive Index Fields	234
5.8.4	Holographic Interferometry of Circular Symmetric Refractive Index Fields	235
5.8.5	Multidirectional Recording of Asymmetric Refractive Index Fields	237
5.8.6	Tomographic Reconstruction in the Refractionless Limit	238
5.8.7	Tomographic Reconstruction of Strongly Refracting Fields	241
5.8.8	Resonance Holographic Interferometry	243
5.9	Defect Detection by Holographic Non-Destructive Testing	245
5.9.1	Classification of Defects	246
5.9.2	Data Reduction for Automatic Qualitative Evaluation	247
5.9.3	Neural Network Approach to Qualitative Evaluation	252
6	Speckle Metrology	259
6.1	Speckle Photography	259
6.2	Electronic and Digital Speckle Interferometry	261
6.3	Speckle Shearography	263
6.4	Electro-Optic Holography	265
A	The Fourier Transform	267
A.1	Definition of the Fourier transform	267
A.2	Fourier Representation	269
A.3	Interpretation of the Fourier Transform	273
A.4	Properties of the Fourier-Transform	273
A.5	The Sampling Theorem and Data Truncation Effects	275
A.6	The Fast Fourier-Transform	279
A.7	Two-Dimensional Image Processing	282
B	Computer Aided Tomography	287
B.1	Mathematical Preliminaries	287
B.2	The Generalized Projection Theorem	289
B.3	Reconstruction by Filtered Backprojection	291
B.4	Practical Implementation of Filtered Backprojection	292
B.5	Algebraic Reconstruction Techniques	297
C	Bessel Functions	299
	Bibliography	303
	Author Index	335
	Subject Index	342
