

TABLE OF CONTENTS

Preliminary remarks	7
Overview of important physical units necessary for understanding	9
Short entry	11
(then, if necessary, continue with chapter "Effect of ionising radiation on humans")	
The types of radiation and the electromagnetic spectrum	14
Ionising (radioactive) radiation, definition, units	17
X-rays	24
Effect of ionising radiation on humans	26
Cellular and sub-cellular effects of ionising radiation	30
Radioactivity in the environment, natural and man-made radiation exposure	31
Radiation exposure in medicine	36
Radon and its decay products	43
Food contamination	49
Smoking	51
Nuclear weapons testing and reactor accidents (Chernobyl and Fukushima)	52
A different look at radioactivity	56

Non-ionising radiation	63
Terahertz beams	64
Constant magnetic and electric fields	65
Alternating electromagnetic fields	72
Low-frequency electromagnetic fields	73
High-frequency electromagnetic fields	75
Biological effects of high-frequency electromagnetic fields ...	77
Does electromagnetic radiation make people ill?	79
Influence of mechanical vibrations on humans	86
Noise and noise effects (sound)	88
Ultrasound	91
Infrasound	93
 Concluding remarks.....	 95
 References	 96
Further reading.....	99
Acknowledgement.....	100
