

Contents

Prologue

- 1 Energetics of the First Life** 3
Armen Y. Mulkidjanian

Part I Primeval Syntheses

- 2 A Hypothesis for a Unified Mechanism of Formation and Enantioenrichment of Polyols and Aldaric, Aldonic, Amino, Hydroxy and Sugar Acids in Carbonaceous Chondrites** 37
H. James Cleaves II
- 3 On the Origin of Phosphorylated Biomolecules** 57
Matthew A. Pasek and Terence P. Kee
- 4 Abiotic Photosynthesis: From Prebiotic Chemistry to Metabolism** 85
Marcelo I. Guzman

Part II Facets of an Ancestral Peptide World

- 5 Salt-Induced Peptide Formation in Chemical Evolution: Building Blocks Before RNA – Potential of Peptide Splicing Reactions** 109
Daniel Fitz, Thomas Jakschitz, and Bernd M. Rode
- 6 Scenario of the Primary Pump: Emergence and Operation of an Automatic Engine to Generate Primordial Peptides and Beyond Nucleic Acids** 129
Auguste Commeyras

7	The Relevance of Peptides That Bind FeS Clusters, Phosphate Groups, Cations or Anions for Prebiotic Evolution	155
	E. James Milner-White	
8	Peptide-Dominated Vesicles: Bacterial Internal Membrane Compartments as Model Systems for Prebiotic Evolution	167
	James N. Sturgis	

Part III RNA Worlds: Ancestral and Contemporary

9	Nicotinamide Coenzyme Synthesis: A Case of Ribonucleotide Emergence or a Byproduct of the RNA World?	185
	Nadia Raffaelli	
10	On Alternative Biological Scenarios for the Evolutionary Transitions to DNA and Biological Protein Synthesis	209
	Anthony M. Poole	
11	Two RNA Worlds: Toward the Origin of Replication, Genes, Recombination, and Repair	225
	Dirk-Henner Lankenau	

Epilogue

12	Integrative Perspectives: In Quest of a Coherent Framework for Origins of Life on Earth	289
	Richard Egel
