

Contents

1	Input-Output Stability	7
1.1	L_q -spaces and their extensions; input-output maps	7
1.2	L_q -stability and L_q -gain; closed-loop stability	9
2	Small-gain and Passivity	16
2.1	The small-gain theorem	16
2.2	The passivity theorem	19
2.3	Euler-Lagrange equations and passivity	25
3	Dissipative Systems Theory	32
3.1	Dissipative systems	32
3.2	Stability of dissipative systems; small-gain and passivity . . .	37
4	Hamiltonian Systems as Passive Systems, and Stabilization of Hamiltonian Systems	53
4.1	Stabilization of Hamiltonian systems	53
4.2	Generalized Hamiltonian systems	56
5	Factorizations of Nonlinear Systems	69
5.1	Stable kernel and image representations; nonlinear perturbation models	69
5.2	Stable kernel representations and parametrization of stabilizing controllers	76
5.3	All-pass factorizations	84
6	Nonlinear $\mathcal{H}_\infty$ Control	91
6.1	State feedback $\mathcal{H}_\infty$ control	92
6.2	Output feedback $\mathcal{H}_\infty$ control	103
7	Hamilton-Jacobi Inequalities	120
7.1	Solvability of Hamilton-Jacobi Inequalities	120

7.2	An aside on optimal control	132
7.3	Dissipativity of a nonlinear system and its linearization	138
7.4	$\mathcal{H}_\infty$ control of a nonlinear system and its linearization	142
