

Contents

1 Fundamentals of Structural Dynamics	1
1.1 Introduction	1
1.2 One-degree-of-freedom System	3
1.2.1 Equation of Motion	3
1.2.2 Free Vibration	3
1.2.3 Response to Harmonic Loading	5
1.2.4 Response to Arbitrary Loading	7
1.3 Multi-degree-of-freedom System	11
1.3.1 Equation of Motion	11
1.3.2 Undamped Free Vibration	13
1.3.3 Forced Vibration Response	17
1.4 Continuous System	21
1.4.1 Equation of Motion	21
1.4.2 Free Vibration	21
1.4.3 Orthogonality of Modes of Vibration	23
1.4.4 Forced Vibration Response	24
2 Behaviour of Buildings Under Lateral Loads	27
2.1 Structural Systems	27
2.1.1 Braced Frame Structures	28
2.1.2 Rigid Frame Structures	29
2.1.3 Shear Wall Structures	30
2.1.4 Shear Wall–Frame Structures	31
2.1.5 Framed Tube Structures	32
2.1.6 Tube in Tube Structures	34
2.1.7 Bundled Tube Structures	35
2.1.8 Outrigger-braced Structures	36
2.2 Modelling of Structural Systems	37
2.2.1 Behaviour of Buildings	37
2.2.2 Modelling of Plane Structures	39
2.2.3 Modelling of Three-dimensional Structures	40
2.2.4 Reduction of Size of Model	41
3 Dynamic Effects of Winds on Buildings	47
3.1 Characteristics of Wind	47
3.1.1 Mean Wind Speed	47
3.1.2 Turbulence	49
3.1.3 Integral Scales of Turbulence	51
3.1.4 Spectrum of Turbulence	53
3.1.5 Cross Spectrum of Turbulence	53

3.2 Wind-induced Dynamic Forces	54
3.2.1 Forces due to Uniform Flow	54
3.2.2 Forces due to Turbulent Flow	57
3.3 Along-wind Response	58
3.3.1 Point Structures	58
3.3.2 Line-like Structures	60
3.3.3 Evaluation of Peak Response	64
3.4 Across-wind Response	70
3.5 Torsional Response	78
3.6 Serviceability Requirements	80
4 Wind Tunnel Studies of Buildings	83
4.1 Introduction	83
4.2 Rigid Model Studies	85
4.3 Aeroelastic Model Studies	87
4.3.1 Aeroelastic Model with Linear Mode (Semi-rigid Model)	88
4.3.2 Aeroelastic Model with Shear–Flexure Mode	91
4.3.3 Aeroelastic Model with Coupled Modes	93
4.4 High-frequency Force Balance Model	95
4.5 Pedestrian Wind Studies	95
5 Analysis of the Behaviour of Buildings During Earthquakes	97
5.1 Earthquake Loading	97
5.2 Response Spectrum Analysis of SDOF	99
5.3 Response Spectrum Analysis of MDOF	101
5.4 Site and Soil–Structure Interaction Effects	107
5.5 Equivalent Lateral Load Analysis	108
5.6 Inelastic Response Analysis	111
6 Earthquake-resistant Design of Buildings	115
6.1 Design Philosophy	115
6.2 Structural Configuration	116
6.2.1 Vertical Configuration	116
6.2.2 Horizontal Configuration	117
6.3 Steel Structures	118
6.3.1 Moment-Resisting Frame (MRF)	118
6.3.2 Concentrically Braced Frame (CBF)	125
6.3.3 Eccentrically Braced Frame (EBF)	126
6.3.4 Knee-Brace-Frame (KBF)	129
6.3.5 Applications	132
6.4 Concrete Structures	136
6.4.1 Moment-resisting Frames	137
6.4.2 Shear Wall Structures	141
6.4.3 Coupled Shear Walls	142
Index	145
