Applications

1	Introduction	
	<i>(B. Cornils, W. A. Herrmann)</i>	1
	Historical Glossary	16
2	Applied Homogeneous Catalysis	27
2.1	Carbon Monoxide and Synthesis Gas Chemistry	29
2.1.1	Hydroformylation (Oxo Synthesis, Roelen Reaction) <i>(C. D. Frohning, Ch. W. Kohlpaintner)</i>	29
2.1.1.1	Introduction	29
2.1.1.2	Fundamental Principles	33
2.1.1.3	Kinetics, Mechanism, and Process Parameters	44
2.1.1.4	Commercial Applications	61
2.1.1.5	Recent Developments	85
2.1.1.6	Conclusions and Future Trends	90
2.1.2	Carbonylations	104
2.1.2.1	Synthesis of Acetic Acid and Acetic Acid Anhydride from Methanol <i>(M. Gauß, A. Seidel, P. Torrence, P. Heymanns)</i>	104
2.1.2.2	Synthesis of Propionic and Other Acids <i>(A. Höhn)</i>	138
2.1.2.3	Carbonylation of Benzyl-X and Aryl-X Compounds <i>(M. Beller)</i>	148
2.1.2.4	Amidocarbonylation <i>(J. F. Knifton)</i>	159
2.1.2.5	Oxidative Carbonylation <i>(A. Klausener, J.-D. Jentsch)</i>	169
2.1.2.6	Other Carbonylations <i>(M. Beller, A. M. Tafesh)</i>	187
2.2	Hydrogenation <i>(H. Brunner)</i>	201
2.2.1	The Hydrogen Molecule	201
2.2.2	Classical Transition Metal Hydrides	201
2.2.3	Nonclassical Dihydrogen Complexes	202
2.2.4	Homogeneous Hydrogenation of Organic Substrates	204
2.2.5	Enantioselective Hydrogenation of Prochiral Substrates	206
2.2.6	Isolated Catalysts versus in-situ Catalysts	209

2.2.7	Transfer Hydrogenation	210
2.2.8	Hydrogenolysis	211
2.2.9	Mechanisms	212
2.2.10	Industrial Applications	216
2.3	Reactions of Unsaturated Compounds	220
2.3.1	Polymerization, Oligomerization, and Copolymerization of Olefins	220
2.3.1.1	Chemical Background (<i>W. Kaminsky, M. Arndt</i>)	220
2.3.1.2	Chemical Engineering and Applications (<i>L. L. Böhm</i>)	236
2.3.1.3	Oligomerization of Ethylene to Higher Linear α -Olefins (<i>D. Vogt</i>)	245
2.3.1.4	Dimerization and Codimerization (<i>Y. Chauvin, H. Olivier</i>)	258
2.3.2	Reactions of other Unsaturated Compounds	269
2.3.2.1	Reactions of Alkynes (<i>J. Henkelmann</i>)	269
2.3.2.2	Stereospecific Polymerization of Butadiene or Isoprene (<i>R. Taube, G. Sylvester</i>)	280
2.3.3	Metathesis (<i>J. C. Mol</i>)	318
2.3.3.1	Introduction	318
2.3.3.2	Scope of the Reaction	319
2.3.3.3	Reaction Mechanism and Catalysts in General	323
2.3.3.4	Homogeneous Catalyst Systems	325
2.3.3.5	Industrial Applications	328
2.3.3.6	Conclusions	330
2.3.4	The Alternating Copolymerization of Alkenes and Carbon Monoxide (<i>E. Drent, J. A. M. van Broekhoven,</i> <i>P. H. M. Budzelaar</i>)	333
2.3.4.1	Introduction	333
2.3.4.2	History of Polyketones	333
2.3.4.3	Copolymerization of Ethylene and CO	335
2.3.4.4	Scope of Olefin/CO Copolymerization	346
2.3.4.5	Conclusions	347
2.3.5	Telomerization (Hydrodimerization) of Olefins (<i>N. Yoshimura</i>)	351
2.3.5.1	Introduction	351
2.3.5.2	Development of Technologies	352
2.3.5.3	Process for the Manufacture of 1-Octanol	356
2.3.5.4	Development and Scope	357
2.3.6	Cyclooligomerizations and Cyclo-Co-Oligomerizations of 1,3-Dienes (<i>G. Wilke, A. Eckerle</i>)	358
2.3.6.1	Introduction	358
2.3.6.2	Cyclodimerization and Cyclotrimerization of Butadiene and Substituted 1,3-Dienes	361

2.3.6.3	Cyclo-Co-Oligomerization of 1,3-Dienes with Olefins and Alkynes	365
2.3.6.4	Mechanistic Considerations	368
2.3.6.5	Summary	370
2.4	Oxidations	374
2.4.1	Oxidation of Olefins to Carbonyl Compounds (Wacker Process) (<i>R. Jira</i>)	374
2.4.1.1	Historical and Economic Background	374
2.4.1.2	Chemical Background	374
2.4.1.3	Kinetics and Mechanism	378
2.4.1.4	Technical Applications (Wacker–Hoechst–Processes)	386
2.4.1.5	Application of the Olefin Oxidation to Organic Syntheses	390
2.4.2	Acetoxylations and Other Palladium-Promoted or -Catalyzed Reactions (<i>R. Jira</i>)	394
2.4.2.1	Historical and Economic Background	394
2.4.2.2	Chemical Background	394
2.4.2.3	Kinetics and Mechanism	396
2.4.2.4	Commercial Processes	401
2.4.2.5	Transvinylolation	402
2.4.2.6	Acetoxylation in Organic Synthesis	403
2.4.2.7	Other Palladium-Promoted or -Catalyzed Reactions	404
2.4.2.8	Conclusions	407
2.4.3	Synthesis of Oxiranes (<i>R. A. Sheldon</i>)	411
2.4.3.1	Historical Development	411
2.4.3.2	Metal-Catalyzed Epoxidation with Alkyl Hydroperoxides: Kinetics and Mechanism	412
2.4.3.3	Commercial Oxirane Processes	416
2.4.3.4	Scope and Applications in Organic Synthesis	418
2.4.3.5	Recent Developments and Future Prospects	421
2.4.4	Aliphatic Carboxylic Acids via Aldehyde Oxidation (<i>P. Lappe, E. Schulz</i>)	424
2.4.4.1	General	424
2.4.4.2	Catalysts	425
2.4.4.3	Kinetics and Mechanism	426
2.4.4.4	Technical Process	427
2.4.5	Oxidation of Arenes and Alkyl Substituted Aromatic Compounds	430
2.4.5.1	The Oxidation of Arenes to Quinones (<i>R. W. Fischer</i>)	430
2.4.5.2	Oxidation of Alkyl-Substituted Aromatic Compounds with Air (<i>R. W. Fischer, F. Röhrscheid</i>)	439

2.5	Reactions with Hydrogen Cyanide (Hydrocyanation) (<i>K. Huthmacher, S. Krill</i>)	465
2.5.1	Introduction and Scope	465
2.5.2	Mechanistic Aspects of Hydrocyanation	466
2.5.3	Hydrocyanation of Olefins	467
2.5.3.1	Hydrocyanation of Non-activated Monoolefins	467
2.5.3.2	Hydrocyanation of Functionalized Olefins	473
2.5.4	Hydrocyanation of Alkynes	476
2.5.5	Hydrocyanation of Dienes	478
2.5.5.1	Adiponitrile Synthesis via Hydrocyanation of Butadiene	478
2.5.5.2	Hydrocyanation of Other Dienes	480
2.5.6	Hydrocyanation of Aldehydes/Ketones	482
2.6	Hydrosilylation and Related Reactions of Silicon Compounds (<i>B. Marciniak</i>)	487
2.6.1	Hydrosilylation	487
2.6.1.1	General Scope and Applications	487
2.6.1.2	Homogeneous Catalysts	490
2.6.1.3	Immobilized Metal Complexes as Catalysts	494
2.6.2	Dehydrogenative Coupling of Hydrosilanes	496
2.6.2.1	Background	496
2.6.2.2	Dehydrogenative Condensation of Hydrosilanes	497
2.6.2.3	Dehydrogenative Silylation of Olefins by Hydrosilanes	498
2.6.3	Disproportionation of Silicon-Containing Olefins	500
2.6.3.1	Metathesis of Silicon-Containing Olefins	500
2.6.3.2	Disproportionation of Vinyl-Substituted Silicon Compounds	501
2.6.4	Silylcarbonylation	502
2.7	Reaction with Nitrogen Compounds: Hydroamination (<i>R. Taube</i>)	507
2.7.1	Introduction	507
2.7.2	General Mechanistic Aspects	508
2.7.3	The Different Catalyst Systems	510
2.7.3.1	Catalyst Systems Containing Alkali Metals	510
2.7.3.2	Catalyst Systems Containing Lanthanides	512
2.7.3.3	Catalyst Systems Containing Iridium	515
2.7.3.4	Catalyst Systems Containing Iron or Ruthenium	516
2.7.3.5	Catalyst Systems Containing Rhodium	518
2.7.4	Perspectives	520

2.8	Reactions of Hydrocarbons and Other Saturated Compounds	521
2.8.1	Oxidations	521
2.8.1.1	Homogeneous Catalysis in the Oxidation of Hydrocarbons to Acetic Acid (<i>Ch. C. Hobbs, Jr.</i>)	521
2.8.1.2	Synthesis of Dimethyl Terephthalate/Terephthalic Acid and Poly(ethylene terephthalate) (<i>D. A. Schiraldi</i>)	541
2.8.2	Halogenations (<i>G. Siegemund</i>)	549
2.9	Asymmetric Syntheses (<i>R. Noyori, S. Hashiguchi</i>)	552
2.9.1	Introduction	552
2.9.2	Preparation of Selected Structures	553
2.9.2.1	Terpenes	553
2.9.2.2	Profens	554
2.9.2.3	Pyrethroids	557
2.9.2.4	Prostaglandins	559
2.9.2.5	Simple Secondary Alcohols	559
2.9.2.6	Amino Alcohols and Related Compounds	561
2.9.2.7	Amino Acids	564
2.9.2.8	Isoquinoline Alkaloids	566
2.9.2.9	Carbapenem Antibiotics	566
2.9.3	Conclusions	568

Developments

3	Recent Developments in Homogeneous Catalysis	573
3.1	Development of Methods	575
3.1.1	Homogeneous Catalysts and Their Heterogenization or Immobilization (<i>B. Cornils, W. A. Herrmann</i>)	575
3.1.1.1	Immobilization by Aqueous Catalysts	577
3.1.1.2	Heterogenization by Other Immiscible Phases (<i>I. T. Horváth</i>)	601
3.1.1.3	Immobilization (<i>P. Panster, S. Wieland</i>)	605
3.1.1.4	Molecularly Defined Organometallic Catalysts on Surfaces (<i>J.-M. Basset, G. P. Niccolai</i>)	624
3.1.1.5	Ligand-Stabilized Clusters and Colloids (<i>G. Schmid</i>)	636
3.1.1.6	New Generation of Re-Immobilized Catalysts (<i>H. Bahrman</i>)	644
3.1.2	Molecular Modeling in Homogeneous Catalysis (<i>R. Klein, R. Schmid</i>)	654

3.1.2.1	Molecular Modeling Techniques	655
3.1.2.2	Applications	661
3.1.2.3	Conclusions and Prospects	668
3.1.3	Parahydrogen Labeling as a New Analytical Method in Homogeneous Catalysis (<i>J. Bargon</i>)	672
3.1.3.1	Introduction	672
3.1.3.2	In-situ NMR Spectroscopy	672
3.1.3.3	Parahydrogen Labeling	673
3.1.3.4	Applications of Parahydrogen Labeling	678
3.1.3.5	Concluding Remarks	682
3.1.4	Chemical Reaction Engineering Aspects of Homogeneously Catalyzed Processes (<i>M. Baerns, P. Claus</i>)	684
3.1.4.1	Kinetics in Homogeneous Catalysis	686
3.1.4.2	Aspects of Catalyst Recycling	695
3.1.5	Introduction to Selected Multicomponent and Multifunctional Catalysts (<i>D. Hesse</i>)	699
3.1.5.1	Introduction	699
3.1.5.2	Advantages in the Use of Multicomponent or Multifunctional Catalysts	700
3.1.5.3	Problems in the Use of Multifunctional or Multicomponent Catalysts	708
3.1.5.4	Conclusions	710
3.1.6	Catalytic Carbon–Carbon Coupling by Palladium Complexes: Heck Reactions (<i>W. A. Herrmann</i>)	712
3.1.6.1	Introduction	712
3.1.6.2	History	713
3.1.6.3	Definition	713
3.1.6.4	Catalysts, Reaction Conditions	714
3.1.6.5	Scope and Limitations	714
3.1.6.6	Mechanism	719
3.1.6.7	Catalyst Deactivation	721
3.1.6.8	Recent Improvements	723
3.1.6.9	Industrial Applications and Perspectives	726
3.1.7	Catalytic Cyclopropanation (<i>A. F. Noels, A. Demonceau</i>)	733
3.1.7.1	Introduction	733
3.1.7.2	Transition Metal Catalyzed Cyclopropanations	734
3.1.7.3	Recent Developments and Applications	737
3.1.7.4	Conclusion: In Search of New Catalysts	744
3.1.8	The Fischer–Tropsch Synthesis – Molecular Models for Homogeneous Catalysis? (<i>W. A. Herrmann</i>)	747
3.1.8.1	Introduction	747
3.1.8.2	Historical and Economic Background	748
3.1.8.3	Technological Features	750

3.1.8.4	Mechanistic Considerations	751
3.1.8.5	Assessment and Perspectives	759
3.1.9	Arene Coupling Reactions (<i>W. A. Herrmann</i>)	762
3.1.9.1	Introduction	762
3.1.9.2	Aryl-Aryl Coupling	763
3.1.9.3	Grignard Cross-Coupling	764
3.1.9.4	Phenol Coupling	765
3.1.9.5	Perspectives	766
3.2	Special Catalysts and Processes	768
3.2.1	Biocatalysis and Enzyme-Analogous Processes (<i>K. Drauz, H. Waldmann, B. Sauerbrei</i>)	768
3.2.1.1	Introduction	768
3.2.1.2	Examples of Enzymatic Conversions	769
3.2.1.3	Enzyme-Analogous Catalysts	780
3.2.1.4	Commercial Applications	782
3.2.1.5	Outlook	796
3.2.2	Template or Host/Guest Relations (<i>F. Vögtle, R. Hoss, M. Händel</i>)	801
3.2.2.1	Introduction	802
3.2.2.2	Metal Cations as Templates	803
3.2.2.3	Neutral Molecules as (Supramolecular) Templates	805
3.2.2.4	Covalent Molecules as Templates	811
3.2.2.5	Kinetic and Thermodynamic Template Effects	816
3.2.2.6	Positive and Negative Templates	818
3.2.2.7	Self-Organization	818
3.2.2.8	Further Developments and Applications	826
3.2.2.9	Conclusions and Outlook	828
3.2.3	Membrane Reactors in Homogeneous Catalysis (<i>U. Kragl, C. Dreisbach, Ch. Wandrey</i>)	832
3.2.3.1	Introduction	832
3.2.3.2	Classification and Examples of Membrane Reactors	833
3.2.3.3	Membrane Reactors in Asymmetric Synthesis	837
3.2.3.4	Outlook	840
3.2.4	Phase-Transfer Catalysis and Related Systems (<i>Y. Goldberg, H. Alper</i>)	844
3.2.4.1	Introduction	844
3.2.4.2	Homogeneous Transition-Metal Catalyzed Reactions Under Phase-Transfer Conditions	844
3.2.4.3	Transition-Metal Containing Phase-Transfer Agents and Their Use in Synthesis	859
3.2.4.4	Conclusions	860

3.2.5	Rare Earth Metals in Homogeneous Catalysis (<i>R. Anwander</i>)	866
3.2.5.1	Introduction	866
3.2.5.2	Catalytic Potential	867
3.2.5.3	Precatalysts	868
3.2.5.4	Carbon–Carbon Bond-Forming Reactions	869
3.2.5.5	Carbon–Heteroelement Bond-Forming Reactions	882
3.2.5.6	Catalysts Structure	887
3.2.5.7	Perspectives	887
3.2.6	Metallocenes as a Source of Fine Chemicals (<i>F. Küber</i>)	893
3.2.6.1	Introduction	893
3.2.6.2	Hydrogenations	894
3.2.6.3	Diels–Alder (DA) Reactions	896
3.2.6.4	Epoxidations	897
3.2.6.5	Carbon–Carbon Bond Formation	898
3.2.6.6	Outlook	900
3.2.7	Homologation (<i>H. Bahrmann</i>)	902
3.2.7.1	Historical Background	902
3.2.7.2	Chemical Basics and Applications	908
3.2.7.3	Mechanism of Reaction	908
3.2.7.4	Technical Applications	912
3.2.7.5	Future Prospects	913
3.2.8	Homogeneous Electrocatalysis (<i>D. Astruc</i>)	915
3.2.8.1	Introduction	915
3.2.8.2	Electron-Transfer-Chain (ETC) Catalyzed Reactions	916
3.2.8.3	Atom-Transfer-Chain (ATC) Catalysis	925
3.2.8.4	Conclusions	926
3.2.9	Homogeneous Photocatalysis (<i>A. Heumann, M. Chanon</i>)	929
3.2.9.1	Definitions	929
3.2.9.2	Synthesis and Activation – What <i>hν</i> Metal Catalysis can do Better?	934
3.2.9.3	Conclusion: What Photochemical Techniques can Provide in Mechanistic Studies of Transition Metal Catalysis	944
3.2.10	Olefins from Aldehydes (<i>W. A. Herrmann</i>)	948
3.2.10.1	Introduction	948
3.2.10.2	The Catalytic Approach	949
3.2.10.3	Catalysts	950
3.2.10.4	Scope of Reaction, Reagents, Side Reactions	950
3.2.10.5	Mechanism	951
3.2.10.6	Perspectives	955
3.2.11	Water-Gas Shift Reaction (<i>W. A. Herrmann</i>)	957
3.2.11.1	Introduction	957
3.2.11.2	Definition	957
3.2.11.3	Mechanism	958

3.2.11.4	Applications	960
3.2.11.5	The Arco Ethylurethane Process	961
3.2.11.6	Catalytic Implications and Perspectives	962
3.2.12	Catalytic McMurry Coupling: Olefins from Keto Compounds (<i>W. A. Herrmann</i>)	964
3.2.12.1	Introduction	964
3.2.12.2	Stoichiometric Titanium and Other Reagents	964
3.2.12.3	Catalytic Deoxygenation	966
3.2.12.4	Perspectives	967
3.2.13	Toward a Homogeneous Hydrodesulfurization Process: Hydrogenation and Hydrogenolysis of Thiophenic Compounds (<i>C. Bianchini, A. Meli</i>)	969
3.2.13.1	Introduction	969
3.2.13.2	Hydrogenation Reactions	970
3.2.13.3	Hydrogenolysis Reactions	974
3.2.13.4	Future Developments	978
3.2.14	Double-Bond Isomerization of Olefins (<i>W. A. Herrmann</i>)	980
3.2.14.1	Introduction	980
3.2.14.2	Catalysts, Scope, and Definition	980
3.2.14.3	Mechanistic Considerations	982
3.2.14.4	Applications	985
3.2.14.5	Asymmetric Isomerization	986
3.2.14.6	Recent Developments	987
3.2.14.7	Perspectives	990
3.3	Special Products	992
3.3.1	Enantioselective Synthesis (<i>H.-U. Blaser, B. Pugin, F. Spindler</i>)	992
3.3.1.1	Introduction and Background	992
3.3.1.2	Critical Factors for the Technical Application of Homogeneous Enantioselective Catalysis	993
3.3.1.3	State-of-the-Art and Evaluation of Catalytic Transformations	995
3.3.1.4	Conclusions and Prospects	1005
3.3.2	Diols via Catalytic Dihydroxylation (<i>M. Beller, K. B. Sharpless</i>)	1009
3.3.2.1	Introduction	1009
3.3.2.2	History and General Features of Osmium-Catalyzed Dihydroxylation Reactions	1010
3.3.2.3	Mechanism of Osmium-Catalyzed Dihydroxylations	1012
3.3.2.4	Scope and Limitation of Asymmetric Dihydroxylation	1014
3.3.2.5	Applications of Diols	1020
3.3.3	Hydrovinylation (<i>P. W. Jolly, G. Wilke</i>)	1024
3.3.3.1	Introduction	1024

3.3.3.2	The Catalyst	1025
3.3.3.3	The Product	1030
3.3.3.4	The Mechanism	1039
3.3.3.5	Outlook	1045
3.3.4	Carbon Dioxide as a C ₁ -Building Block (<i>E. Dinjus, R. Fornika</i>)	1048
3.3.4.1	Introduction	1048
3.3.4.2	Catalytic C–C Bond-Forming Reactions	1051
3.3.4.3	Transition Metal Catalyzed Formation of Formic Acid and its Derivatives from CO ₂ and H ₂	1058
3.3.4.4	Summary and Outlook	1067
3.3.5	Reductive Carbonylation of Nitro Compounds (<i>R. Sundermann, H. J. Scholl</i>)	1072
3.3.5.1	Introductory Remarks	1072
3.3.5.2	Synthesis of Isocyanates	1073
3.3.5.3	Thermodynamics, Kinetics, and Mechanism	1075
3.3.5.4	Outlook	1079
3.3.6	New Approaches in C–H Activation of Alkanes (<i>A. Sen</i>)	1081
3.3.6.1	Introduction	1081
3.3.6.2	Radical Pathways	1082
3.3.6.3	Oxidative Addition Pathways	1084
3.3.6.4	Electrophilic Pathways	1085
3.3.6.5	Conclusions	1090
3.3.7	Pauson–Khand Reaction (<i>V. Rautenstrauch</i>)	1092
3.3.7.1	Introduction	1092
3.3.7.2	2-Pentylcyclopent-2-en-1-one via Catalytic PKR	1094
3.3.7.3	Mechanism, Side Reactions, and Pressure	1096
3.3.7.4	Conclusions and Perspectives	1099
3.3.8	Cyclooligomerization of Alkynes (<i>H. Bönнемann, W. Brijoux</i>)	1102
3.3.8.1	Introduction	1102
3.3.8.2	Survey of the Catalysts	1102
3.3.8.3	Five- and Six-Membered Heterocycles	1104
3.3.8.4	Six- and Eight-Membered Carbocycles	1111
3.3.9	New Developments in the Carbonylation of Alkynes: a Clean Route to Methacrylates (<i>E. Drent, W. W. Jager, J. J. Keijsper, F. G. M. Niele</i>)	1119
3.3.9.1	Introduction	1119
3.3.9.2	History of the Carbonylation of Alkynes	1120
3.3.9.3	Carbonylation of Propyne	1121
3.3.9.4	Scope of the New Catalyst System	1129
3.3.9.5	Conclusions	1130

3.3.10	Special Reactions in Homogeneous Aqueous Systems . . .	1132
3.3.10.1	Synthesis of Polymers (<i>B. M. Novak</i>)	1132
3.3.10.2	Homogeneous Catalysis in Living Cells (<i>L. Víggh, F. Joó</i>) . . .	1142
3.3.11	Cyclic Hydrocarbons from Diazoalkanes (<i>W. A. Herrmann</i>) .	1149
3.3.11.1	Introduction	1149
3.3.11.2	Scope and Definition	1149
3.3.11.3	Mechanistic Considerations	1150
3.3.11.4	Catalytic Cyclization	1151
3.3.11.5	Enantioselective Cyclization	1154
3.3.11.6	Perspectives	1154
3.3.12	Acrolein and Acronitrile from Propene (<i>W. A. Herrmann</i>) . .	1156
3.3.12.1	Introduction	1156
3.3.12.2	Scope and Technological Features	1157
3.3.12.3	Catalyst Principle and Mechanism	1158
3.3.12.4	Organometallic Models	1160
3.3.12.5	The "Amm(on)dehydrogenation"	1161
3.3.12.6	Perspectives	1162
4	Epilogue	1165
4.1	Homogeneous Catalysis – <i>Quo vadis?</i>	
	(<i>W. A. Herrmann, B. Cornils</i>)	1167
4.1.1	Immobilization of Homogeneous Catalysts	1169
4.1.2	Colloidal Organometallic Catalysts	1171
4.1.3	Multicomponent and Multifunctional Catalysis	1172
4.1.4	Stereoselective Catalysis	1172
4.1.5	Metals from Stoichiometric Reactivity to Catalytic Efficiency	1175
4.1.6	Mechanistic Knowledge and Theory – Keys to Catalyst Design	1176
4.1.7	Catalyst Performance	1178
4.1.8	Organometallic Electrocatalysis	1178
4.1.9	New Chemical Feedstocks for Homogeneous Catalysis . . .	1179
4.1.10	Catalysis under Supercritical Conditions	1184
4.1.11	New Reactions, Improved Catalysts	1184
4.1.12	Organometallic Catalysts for Polymers	1187
4.1.13	Catalyst Reactivation, Process, and Reactor Technology . . .	1191
4.1.14	Final Closure	1191
