

Contents

	Preface	v
Chapter 1	Background	
1	Cobordism Theory	1
2	Characteristic classes	2
3	Pontrjagin classes of quaternionic projective spaces	5
4	Characteristic classes and invariants	7
5	Representations and vector bundles	9
6	Multiplicative sequences and genera	13
7	Calculation of $\varphi(P_k(\mathbb{H}))$	15
8	Complex genera	18
Chapter 2	Elliptic genera	
1	The Weierstraß $\wp$ -function	23
2	Construction of elliptic genera	25
3	An excursion on the lemniscate	29
4	Geometric complement on the addition theorem	32
Chapter 3	A universal addition theorem for genera	
1	Virtual submanifolds	35
2	A universal genus	38
Chapter 4	Multiplicativity in fibre bundles	
1	The signature and the L -genus	41
2	Algebraic preliminaries	44
3	Topological preliminaries	46
4	The splitting principle	48
5	Integration over the fibre	51
6	Multiplicativity and strict multiplicativity	52

Chapter 5 The Atiyah-Singer index theorem

1	Elliptic operators and elliptic complexes	57
2	The index of an elliptic complex	59
3	The de Rham complex	59
4	The Dolbeault complex	60
5	The signature as an index	63
6	The equivariant index	66
7	The equivariant χ_y -genus for S^1 -actions	68
8	The equivariant signature for S^1 -actions	71

Chapter 6 Twisted operators and genera

1	Motivation for elliptic genera after Ed Witten	73
2	The expansion at the cusp 0	77
3	The Witten genus	82
4	The Witten genus and the Lie group E_8	89
5	Plumbing of manifolds	92

Chapter 7 Riemann-Roch and elliptic genera in the complex case

1	Elliptic genera of level N	97
2	The values at the cusps	98
3	The equivariant case and multiplicativity	100
4	The loop space and the expansion at a cusp	102
5	The differential equation	103
6	The modular curve	107

Chapter 8 A divisibility theorem for elliptic genera

1	The theorem of Ochanine	113
2	Proof of Ochanine's theorem	117

Appendix I Modular forms

by Nils-Peter Skoruppa

1	Fundamental concepts	121
2	Examples of modular forms	124
3	The Weierstraß $\wp$ -function as a Jacobi form	128
4	Some special functions and modular forms	134
5	Theta functions, divisors, and elliptic functions	142
6	Elliptic genera of level N	149
7	N -division points and $\Gamma_1(N)\backslash\mathfrak{h}$	153

Appendix II The Dirac operator

by Paul Baum

1	The solution	163
2	The problem	165

Appendix III Elliptic genera of level N for complex manifolds

.	169
-----------	-----

Appendix IV Zolotarev polynomials and the modular curve $X_1(N)$

1	Zolotarev polynomials	187
2	Interpretation as an algebraic curve	189
3	The differential equation — revisited	192
4	Modular interpretation of Zolotarev polynomials	194
5	The embedding of the modular curve	195
6	Applications to elliptic genera	197

Bibliography	199
