|-----------------------------------------------------------------------------------|-----------|
| <b>1 Rhegmatogenous Retinal Detachment .....</b>                                  | <b>1</b>  |
| 1.1 Introduction .....                                                            | 2         |
| 1.2 Vitreous Body .....                                                           | 2         |
| 1.3 Precursors of Rhegmatogenous Retinal Detachment .                             | 2         |
| 1.4 Characteristics of Rhegmatogenous Retinal Detachment .....                    | 3         |
| References.....                                                                   | 6         |
| <b>2 Preoperative Examination .....</b>                                           | <b>7</b>  |
| 2.1 How to Find the Break or Breaks .....                                         | 8         |
| 2.2 The 4 Rules to Find the Primary Break .....                                   | 13        |
| 2.2.1 Superior Temporal or Nasal Detachments ....                                 | 13        |
| 2.2.2 Total or Superior Detachments that Cross the 12 o'Clock Meridian .....      | 16        |
| 2.2.3 Inferior Detachments .....                                                  | 17        |
| 2.2.4 "Inferior" Bullous Detachments .....                                        | 17        |
| 2.3 Some Special Types of Detachment .....                                        | 18        |
| 2.3.1 Inferior Detachment with a Hole at 6 o'Clock .                              | 18        |
| 2.3.2 Inferior Detachment in Presence of a Buckle .                               | 20        |
| 2.3.3 "Total" Detachment .....                                                    | 20        |
| 2.3.4 Mixed Detachment with Convex and Concave Components .....                   | 23        |
| 2.4 Summary .....                                                                 | 25        |
| <b>3 Acute Rhegmatogenous Vitreous Hemorrhage .....</b>                           | <b>27</b> |
| 3.1 Precursors of Retinal Detachment in the Presence of Vitreous Hemorrhage ..... | 28        |
| 3.2 Topography of Acute "Vitreous" Hemorrhage .....                               | 28        |
| 3.3 Conservative Management .....                                                 | 30        |
| 3.4 Clinical Study and Results .....                                              | 37        |
| 3.5 Summary .....                                                                 | 39        |
| References.....                                                                   | 40        |

|          |                                                                                                  |           |
|----------|--------------------------------------------------------------------------------------------------|-----------|
| <b>4</b> | <b>Rhegmatogenous Retinal Detachment “without” a Break ..</b>                                    | <b>41</b> |
| 4.1      | Characteristics of a Rhegmatogenous Retinal Detachment .....                                     | 42        |
| 4.2      | Optical Problems in the Search for the Retinal Break ..                                          | 43        |
| 4.2.1    | Hazy Media .....                                                                                 | 43        |
| 4.2.2    | Pupillary Obstruction .....                                                                      | 43        |
| 4.3      | Techniques for Finding a Tiny Break .....                                                        | 45        |
| 4.3.1    | Define the Borders of the Retinal Detachment .....                                               | 45        |
| 4.3.2    | Use Special Magnification .....                                                                  | 45        |
| 4.4      | Intraoperative Techniques for Finding a Tiny Break ..                                            | 46        |
| 4.4.1    | Re-study the Retinal Periphery with Depression .....                                             | 46        |
| 4.4.2    | Diagnostic Freezing at Special Points .....                                                      | 47        |
| 4.4.3    | Diagnostic Balloon in the Area of Suspicion ..                                                   | 47        |
| 4.4.4    | Prospective Segmental Buckling .....                                                             | 48        |
| 4.4.5    | Diagnostic Expanding Gas Bubble (Descending or Ascending) .....                                  | 53        |
| 4.4.6    | Vitrectomy in Conjunction with Heavy Perfluorocarbon Liquids .....                               | 58        |
| 4.5      | Summary .....                                                                                    | 59        |
|          | References.....                                                                                  | 60        |
