

Contents

1	Introduction.....	1
1.1	Overview	1
1.2	Goals.....	2
1.3	Scientific Image Computing.....	4
2	Confocal Imaging of an Acinus	7
2.1	The Imaging Problem in Lung Research	7
2.2	Material and Instrumentation	9
2.3	Prescanning and Definition of a Region of Interest.....	10
2.4	Confocal Laser Scanning Microscopy.....	11
2.4.1	Basic Principles in Confocal Microscopy	11
2.4.2	Types of Systems	12
2.4.3	Imaging Properties	13
2.4.4	Confocal Instrumentation	15
2.4.5	Contrast Generation	16
2.4.6	Application of Confocal Imaging to Thick Sections	17
2.5	A Framework for Scanning Large Volumes in Confocal 3-D Imaging.....	19
2.6	A 3-D Data Volume Representing a Complete Acinus ..	24
3	3-D Analysis of a Complete, Highly Resolved Respiratory Unit.....	25
3.1	Basics of 3-D Analysis	25
3.2	Image Preprocessing	25
3.3	Segmentation and Labeling	27
3.4	An Automated Segmentation Procedure.....	28
3.5	Quantification of Structural Components.....	30
3.5.1	Determination of Volumes	30
3.5.2	Fractal Analysis of Lung Parenchyma	30
3.6	3-D Topology as an Analytical Tool	30
3.6.1	Introduction	32
3.6.2	Basics of 3-D TOP	32

3.6.3	Modules and Functionality of the 3-D TOP Software	34
3.6.4	Application to a Lung Data Set	37
3.6.5	Analysis of Septae	39
4	3-D Visualization of Microscopic Volumes of Lung	41
4.1	Basics of 3-D Visualization	41
4.2	Types of Volume Rendering	43
4.2.1	Image and Object Order Rendering.....	43
4.2.2	Implementations.....	44
4.2.3	Voxel Intensities and Image Order Rendering ..	45
4.3	Voxel Attributes and Object Order Rendering.....	46
4.3.1	Alpha-Blending.....	49
4.3.2	Brightness.....	49
4.4	3-D Imaging Meets 3-D Graphics.....	52
4.5	Stereoscopic Displays and Virtual Reality.....	53
5	Discussion of 3-D Analysis at Respiratory Units	57
6	Analysis of the Conductive Part of Lung.....	61
6.1	Introduction	61
6.2	Stereoscopic Tracings of Casts	62
6.3	Analysis of Traced Data	65
7	A Computer Lung Modeler.....	67
7.1	Introduction.....	67
7.2	A Self-Similar, Asymmetric Model of a Lung Lobe	67
7.3	Scaling and Strahler-Ordering Scheme	69
7.4	Transition in the Bifurcation Pattern.....	69
7.5	Completing a Graphical Lung Model with Limited Stochastics.....	70
8	Computational Physics Applied to a Bronchial Tree Model	73
8.1	Introduction.....	73
8.2	Scaling of the Computer Lung Model	73
8.3	Dynamics with Breathing.....	75
8.3.1	Model Pressure and Volumes.....	75

8.3.2	Modeling of Respiratory Units and Volume-to-Surface Relationships.....	76
8.3.3	Flow Rates and Initial Partial Pressure	78
8.4	Convection	78
8.5	Resistance and Reynolds Number.....	79
8.6	Diffusion	79
8.6.1	Equations Describing Diffusion in Lung.....	80
8.7	Mass Transport Equations	81
8.8	Implementation and Run-Times.....	82
9	Model Predictions	85
9.1	Convection and Reynolds Numbers	85
9.2	Oxygen and Ozone Mass Transport	85
10	Discussion of Structural Modeling and Functional Simulation	93
10.1	Summary of Morphological Modeling	93
10.2	How Could the Structure of the Bronchial Tree Be Explained?.....	93
10.3	Functional Predictions	95
10.4	Outlook	96
11	Summary	97
	References.....	99
	Subject Index.....	107
